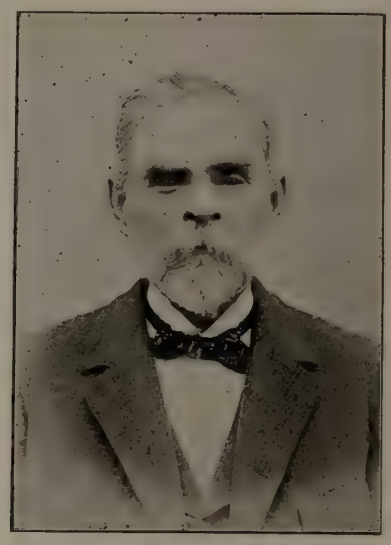
Mr. Rathbun: When we met the Ontario House we were confronted with the fact that the majority of the license-holders were against the last resolution, and for that reason it seems to me that we have reached a point where every man should be willing to declare where he stands upon this subject, and then the government can compute the interests that are for and against it, and draw their conclusions. This is only fair to the government.

The Chairman: Then you pass this resolution, that the names of those supporting the resolution be taken.

The resolution was declared carried unanimously.

Ald. Scott: I would like to move a resolution giving effect in another direction, if found advisable, a little later on:

Moved by James Scott, seconded by John Bertram, and resolved: That a committee consisting of Messrs. Rathbun, Waldie, Bertram and the mover be appointed to consider the advisability of petitioning the government of Ontario to grant the request contained in the resolu-



MR. J. P. NEWMAN, Wiarton.

tion just adopted by this meeting, and that this committee is hereby authorized to obtain signatures to such petition if deemed advisable, and to present the same to the government.

Ald. Scott: The idea I have in connection with it is simply this—it is just possible that an effort may be made by some who are interested to the contrary to belittle the importance of this meeting, and of the former meeting that we held on the subject. Efforts I know have been made to do that, and we were told that the men who were here were chiefly men who were not interested in the subject, or if so were interested only to a very small extent, and therefore that their views on the subject could hardly have any weight with the government in determining the course to be pursued as to the request made by the meeting. Now, in order to show that this is a live interest, that the people of Ontario take a deep interest in it, that not only the lumber interests, but other interests are deeply concerned, I propose that if the government shows any very great delay or hesitancy in dealing with the subject, that this committee should be empowered to obtain signatures to a petition asking the government to act and act promptly, and thereby carry out the views of the country at large on this subject. I ask that this committee shall have power in the name of this meeting to do that.

Mr. Rathbun: I ask, in the public interest, that this same committee deal with this export question. They can get information on that phase of the question just as readily as they can get it on the other; they can keep it separate. They can press the Dominion House, they can get others to work it. I hope you will secure the other members of the committee to go on with the work with the Dominion House as well as the Ontario.

Ald. Scott: I have no objection to doing it.

Upon a vote being taken this resolution was also carried unanimously.

Mr. Robert Watt: I want to read this resolution now: "Moved by Robert Watt, seconded by John P. Newman, that the Dominion government be urged to impose an import duty of two dollars on all sawn lumber imported into Canada."

The motion was carried unanimously.

The following letter was received by the Chairman:

GRAVENHURST, ONT., Oct. 4th, 1897.

DEAR SIR,—With reference to a circular announcing a meeting to take place on October 6th, I regret my unability to be present. At the meeting held on August 19th my views were those of the minority, so far as the time to act is concerned. I thing the Governor-General should declare a policy now, but not to take effect until September, 1898: That if the Americans did not amend the Dingley Bill in regard to the duty on Canadian lumber, that there would be an export duty imposed on Canadian logs; further, I am in favor of placing an import duty of $2 on American lumber at once.

Yours respectfully,

J. J. MCNEIL.

Votes of thanks were tendered to Lieut-Col. Davidson and Mr. A. A. Scott for their services respectively as chairman and secretary, and to the Board of Trade. At 5 p. m. the meeting adjourned.

## MR. JOHN P. NEWMAN.

MR. John P. Newman, who spoke on behalf of the hardwood industry at the recent lumbermen's meeting, and whose portrait we publish, was born in Norfolk, England, in the year 1842, and came to Canada with his parents ten years later. Having learned the trade of a shoemaker in Halton County, he removed to Listowel in 1865, and started in business for himself, continuing for 22 years. He then went on the road for the North American Life Assurance Company, and in 1889 removed to Wiarton and entered into the lumber business with Mr. A. G. Seaman as partner. In November of last year Mr. Newman bought out his partner's interest in the business. He has a good saw mill equipped with modern machinery, and having a capacity of from 20 to 25 M feet per day, according to the kind of timber sawn. He employs 25 men. The output for this season will be 4,000,000 feet, besides about 1,000,000 cedar shingles. Since going to Wiarton he has handled large quantities of hemlock timber for the Soo canal and other government works, and is now making preparation to handle a large quantity the coming season.

Mr. Newman believes in free trade, but is opposed to giving the Americans any privileges they refuse us.

---

Numerous testimonials continue to reach us of the value of THE LUMBERMAN as an advertising medium. The "Wanted and For Sale" department is especially recognized as a means of securing quick returns at small cost.

The screens and wet presses furnished by the Jenckes Machine Co., of Sherbrooke, are now arriving at the Morgan Falls mills of the Acadia Pulp & Paper Co., and the whole plant is expected to be in operation within a short time.

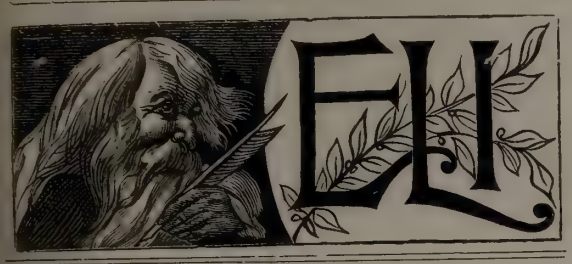
The Chicoutimi Pulp Co. have decided to extend their mill, and are adding another 40" Crocker turbine, arranged to work under 70 foot head, which is being supplied by the Jenckes Machine Co., of Sherbrooke, making the fourth of these wheels supplied.

Water was turned into the flume at the factory of the Boston Rubber Co., at St. Jerome, Que., on the 25th ult. The steel flume, which is 350 ft. long and 6 ft. in diameter, was furnished complete, including a 55" Crocker wheel, by the Jenckes Machine Co., of Sherbrooke, Que.

The Manitoba & Winnipeg Lumber Co., a new organization, will build extensive saw-mills in Winnipeg next month. They have purchased an extensive pine timber limit south of Lake of the Woods, and will construct a canal some fourteen miles to connect with the watercourses leading to Winnipeg.

The Old Ironsides Mine, at Greenwood, B. C., have got their new plant, which was furnished by the Jenckes Machine Co., of Sherbrooke, Que., into position, and are now about ready to ship ore. This property is expected to enter the list of dividend payers within the next few months.

The Dominion Paper Co., extending and enlarging their mills at Kingsey Falls, have placed an order with the Jenckes Machine Co., of Sherbrooke, for two of their 30" Crocker special turbine wheels. These wheels are mounted on one shaft, set horizontally in a steel case, thus doing away with gearing and attendant evils.



A traveller for one of our typefounders told me of an experience in a western town. Calling at the local newspaper office, he was advised that a certain merchant wished to see him. Locating the merchant, he made himself known. "Oh, yes, I wish to buy some type; I want to get something different from anybody else," was the greeting. The merchant gave his order for several fonts of Jenson type to be used in his advertisement in the local paper, remarking that the publisher had agreed to confine the use of this type to his announcements. Feeling interested in this unusual transaction, the traveller enquired of the merchant as to his methods of advertising, in reply to which he said: "When times are dull I double my space, but when business is rushing I never think about my advertisement. That is the policy I work on." In this there may be some food for reflection.

* * *

Having had occasion recently to visit the lumbering towns of Penetang and Midland, on the south-east corner of the Georgian Bay, I was impressed with the small number of men out of employment, and remarked that it must be an indication of better times. At Penetang the mills were closed down, and the town was what we might say "dead." I was told that this condition of things was brought about in this way: For some years past there has been very little doing in the woods in the winter, and many workmen who relied upon this source of employment were disappointed. This fall the outlook was not promising, and, fearing another winter of idleness, they sought new fields for their labors. Some went to the mining regions and others to the farms in the Northwest. As the season advanced, the lumber firms resolved to go into the woods somewhat extensively, and every man in the town found employment, and at wages higher than was paid last year. I hear that from $18 to $22 is being paid to woodsmen, while last year from $14 to $18 was the scale.

* * *

Since I last penned my few casual observations, it has been my pleasure to meet two worthy lumbermen of the Algoma district, Messrs. C. S. Hanes and W. R. Rodd, of the Blind River Lumber Company. These gentlemen, with Messrs. R. Wigle and R. Fader, have an extensive plant at the mouth of the Blind River, in which about $100,000 has been invested. The company manufacture pine and hardwood lumber, shingles and lath, making a specialty of black birch. In connection with their mill property there is a very valuable water power, surrounded by abundance of spruce timber. Hence the location is regarded as a very desirable one for the manufacture of pulp. The construction of the Ottawa, Arnprior and Parry Sound Railway has been the means of establishing a very low freight rate to Montreal, in fact, lower than is given from Bay City and other Michigan points. Mr. Rodd tells me that the rate from Blind River by water to Parry Sound, and thence by rail to Montreal, is only 13½ cents, while the Bay City rate is about four cents higher. The opening of this new route, he says, compelled the C. P. R. to give the same terms. Messrs. Rodd and Hanes are strong advocates of the preservation of our forest wealth. They would not be satisfied with an export duty, but think the government should refuse to allow one stick of timber to go out of the country in its raw state. They came to Toronto on private business, with the object of investigating the prospects for some special trade, but, learning of the lumbermen's meeting announced for the 6th ultimo, decided to remain over. That they were well pleased with the meeting was clearly evident.

* * *

Little over one year ago the removal of Messrs. Donogh & Oliver from Toronto to Tonawanda was chronicled in The Lumberman. A few weeks ago I met Mr. Donogh in Toronto, and was apprised that an important change had been made in his company. Mr. Lewis H. Swan has bought out Mr. Joseph Oliver's interest, and the business of Messrs. Swan Bros. has been consolidated with that of the Donogh & Oliver Company. Mr. L. H. Swan becomes president, and Mr. Donogh retains his position as secretary and treasurer. Thus a strong combination is formed, which will undoubtedly result to the interests of all concerned. Of Mr. Donogh nothing need be said. His long connection with the eastern trade has placed him in the front rank of business men. Mr. L. H. Swan is a younger member of the trade, yet his experience has been somewhat varied. His early education in lumber matters was obtained, I think, in Indiana, but later he removed to Michigan and became associated with the firm of J. W. Howry & Sons, who operated at Fenelon Falls, Ont. On their suspension he managed the business for a short time for the Bank of Toronto. Recently he joined with his brother in the wholesale trade at Buffalo. Now, as to Mr. Oliver. I have frequently heard the remark that he never felt at home under the American flag, and no doubt he seized about the first opportunity to return to his native land. Hence we have the Oliver Lumber Company of Toronto, who have established themselves in neat and comfortable offices in the Canada Life Building. The company are incorporated under an Ontario charter, and will conduct a general wholesale business. Joseph's many friends in Toronto welcome him back again.

* * *

The invincible newspaper man captured Mr. D. Davidson, of Penetang, when in Toronto the other evening, and he expressed himself strongly on the lumber situation. "The people of the province of Ontario," said Mr. Davidson, "hardly realize what a benefit they would derive from the manufacture of timber on the Georgian Bay, instead of allowing the logs to be floated across to Michigan, as we are doing at present. Let us take the town of Parry Sound as an example, and this is only one lumber manufacturing centre out of a dozen on the Georgian Bay. The capacity of the Parry Sound mills, running full time, would be probably in the neighborhood of between forty and fifty million for the season. This would give employment to about 150 men; it would mean that 75 families, at least, would require dwellings. The trade of the town would be nearly double what it is to-day. This body of people would create a cash market for the farmers throughout the district. They would require beef, pork, mutton, butter, eggs, milk and vegetables. The farmers in turn would be enabled to pay cash to the local storekeeper for what they would require. The men employed around the mills would also create a great source of trade in the town. Besides local retail trade, the wholesale trade would quickly feel the effects; in fact, everybody would derive some benefit from this industry.

"It is hard to calculate the number of mills that would be set in motion, or the number of men that would be employed, for, besides Parry Sound, there are Midland, Penetang, Byng Inlet, French River, Cutler, Spanish River, Thessalon, Blind River, and half a dozen important mill points on Manitoulin and St. Joseph's Islands. All would be benefitted by the manufacture of Canadian logs on the Georgian Bay, instead of in Michigan. As things are at present, the mill men on the Georgian Bay are decidedly at a disadvantage as compared with Michigan lumbermen

"Then, again, suppose the 150 men we spoke of were employed in Parry Sound. They would probably put in circulation every month between $3,500 and $4,000, and at many other places a similar amount. The Ontario manufacturers, the wholesale trade and workingmen throughout the province would be greatly benefitted, as we have said before.

"I think, however, the question is too big and too important to be settled off-hand by an order-in-council. No doubt the government will give this matter their careful consideration at an early date."

Mr. Davidson has a quiet vein of humor, and a little story from him is always worth listening to. The other evening he told a story of a prominent and enthusiastic member of the Methodist church in a northern saw-mill town. A Michigan lumberman was staying at the hotel over the Sabbath. The resident called upon the visitor Sunday evening.

"I shall be glad to have you come to church. You will be made more than welcome. You will here a good sermon, and I am sure you will feel better. Come, my dear friend, come."

The visitor from Michigan responded: "I'm greatly obliged to you, neighbor, for the kind invitation; indeed, I am. But my wife and daughters 'to hum' over in Michigan look after the church-going and spiritual end of the business. I came over to Canada after logs. Yes, it's logs I'm after, neighbor—logs!"

---

The Foley Mines, of Seine River, Ont., are now installing two 100 h.p. steel boilers, built by the Jenckes Machine Co., of Sherbrooke.

Mr. McDougall, president of the Montreal Quarry Co., has bought the pulp mill at Pont Rouge, Que., for a syndicate. It is proposed to expend some $50,000 on the property.

The Jenckes Machine Co., of Sherbrooke, shipped last week one of their heavy 50 h.p. slide valve engines, with standard steel tubular boiler, to Desire Thibault, Esq., of East Hereford, Que.

The Monte Cristo Mining Co., of Rossland, have made a fresh strike, and have ordered a complete new hoisting and pumping plant from the Jenckes Machine Co., of Sherbrooke, which has been supplied from their Rossland stock.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

## CONSIDERATION OF OUR TIMBER POLICY.

MUCH space in this number is given to a verbatim report of the meeting of lumbermen held in Toronto on October 6th, at which the future timber policy of the country was discussed at length, and resolutions passed memorializing both the Ontario and Dominion governments to take action looking to the removal of the discrimination that now exists against Canadian lumbermen. The interest in the question is by no means confined to Ontario; the influence of the meeting will be felt from the Pacific to the Atlantic; hence we believe the complete report of the proceedings which we give will be especially appreciated by lumbermen who were not able to be present at the meeting.

The outcome of the meeting was the passing of resolutions declaring it to be in the public interest that all timber cut from crown lands be manufactured in Canada; requesting the Dominion government to give notice, by order-in-council, of an export duty on saw-logs and pulpwood; and favoring the immediate imposition of an import duty on lumber.

Regarding the former, the Ontario government had already announced that no interference would be made with existing licenses, which expire on the 30th of April, 1898, and since the meeting a reply has been received from the Premier that the question of entirely prohibiting the export of saw-logs from the province was too grave a question to be dealt with by an order-in-council, and that the timber policy would be fully gone into at the next session of the Legislature. Dropping consideration of current licenses out of the question, we cannot see that any serious objection can be raised to deferring action until an opportunity is given of having the matter discussed in the Legislature. Just when the Legislature will meet has not yet been decided, but it will very probably be early in the new year, when the first question to be considered should be the policy of the government with respect to timber licenses. To our own lumbermen is due some measure of relief from the present unenviable position in which they are placed by the United States tariff law.

As to an export duty, it seems only reasonable that the Dominion cabinet should be asked to exercise that power which was given to it by special act of parliament. The agreement between the United States and Canada in respect to the lumber trade was broken by the former country. Why, then, should we hesitate to enforce a law that was only removed from our statutes upon the granting of terms that are now not honored. Our wisest policy would seem to be to legislate for our own country, independent of the United States, and the sooner this is done the sooner will our rights be recognized.

Whatever difference of opinion may exist as to the wisdom of applying export duties, the lumber trade is almost a unit in demanding that an import duty be imposed on lumber coming into Canada. This is a matter which affects western Ontario, Manitoba and the Northwest very seriously, and other sections of the Dominion to a less extent. An evidence of this is found in the remarks of Mr. John Piggott, of Chatham, Ont., who stated that last year he had purchased three million feet of lumber in the United States. This lumber was distributed throughout the planing mills and retail yards of western Ontario, to the displacement of so much Canadian stock. Further, much of this lumber was probably purchased in Michigan, and was no doubt manufactured at the Michigan mills from Canadian logs, exported from the Georgian Bay district free of duty and shipped as lumber back into Canada. This is only one instance. In the last year United States lumber has been sold in Toronto, London, Hamilton, Montreal, and even Quebec, in considerable quantities. In Manitoba and the Northwest this competition is keenly felt. By means of the wide market afforded American manufacturers, they are enabled to sell the low grade stock in Canada at a very low figure, and the Canadian manufacturer, being debarred from the United States market by a two-dollar duty, is obliged to close his mill and sell his logs to be manufactured in a foreign country. If we cannot have the United States market, let us at least keep our own.

## THE LUMBER TRADE OF THE NORTHWEST.

THE lumber trade is to a large extent dependent upon agriculture. This is forcibly illustrated in Manitoba and the Northwest, where the abundant crops of this year, accompanied by fair prices, have created such a demand for lumber that the mills are taxed to their utmost capacity to furnish the supply. Farmers in that country are gradually becoming more prosperous, and as funds become available are making improvements in the way of new buildings and repairs. The lumber for this market is now obtained from British Columbia, the Lake of the Woods district, and the states to the south of the border line. It has always been held that the lumber consumers of the Northwest would strongly oppose the imposition of an import duty on American lumber, as likely to raise the price and give the manufacturers of British Columbia and the Lake of the Woods, particularly the latter, a monopoly of the trade, there being few local mills of any importance.

It is the purpose of this article to point out to manufacturers in Northwestern Ontario the possibility of supplying this market, which promises to grow in importance from year to year. The distance from Duluth to Winnipeg is some 500 miles, and we can see no reason why lumber from the Georgian Bay and Algoma districts could not be placed on the Winnipeg market at the same price as that from Duluth. There is one essential, however, necessary to this end, namely, cheaper freight rates over the C. P. R. For some unaccountable reason the management of this railway have rather discouraged this trade by charging a rate out of all proportion to that charged in other sections. For instance, we are informed that the rate from Port Arthur to Winnipeg, where there is no competition, is from 18 to 20 cents, while for the same distance in eastern Ontario the charge would be only seven or eight cents. Where the railway meets competition the rate is reduced to meet that of its American competitor.

Should an import duty be placed on American lumber our Ontario lumbermen should take immediate steps to capture the market, which to them justly belongs. An outlet would thus be secured for some of the common grades which are now so difficult of sale, as the requirements of the market are chiefly confined to this stock. The people of the Northwest have little to fear from an import duty on lumber.

## NORTH-WEST TIMBER RESERVES.

THE Dominion government has announced a change of policy regarding the timber regulations of Manitoba and the Northwest Territories, which indicates a growing recognition of the importance of protecting our forest wealth. That portion of the Dominion is, unfortunately, very meagrely timbered, and it is the intention of the government to maintain permanent timber reserves. With that object in view the heaviest timber belts will be withdrawn from settlement, and a systematic policy of preservation adopted. The young trees will be preserved by an efficient staff of rangers, who will patrol the limits. It is the purpose to expend considerable amount of money to lay out a proper fire guard, a sum having been appropriated at the last session for this purpose.

Above the timber reserves at Moose Lake and White Turtle Mountains, where the chief limits are to be found, there are numerous lakelets. These will be connected with wide roads, which will form a complete barrier to the progress of a fire. The open space and the lakes should effectually prevent any further ravages and act as a reliable fire break.

The settlers will be allowed to cut the matured trees only, and by this means a permanent supply will be secured, which will mean a great deal to the country. The officers of the Dominion government having charge of this work are to be congratulated on the steps taken.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

### FOR SALE.

HEMLOCK DIMENSION STUFF AND stock lumber. Bill stuff cut to order. Correspondence solicited. REID BROS., Hepworth Station, Ont.

### WANTED.

LUMBERMEN TO ADVERTISE IN THIS column stocks of lumber for sale. Probable purchasers look for this information. Address, CANADA LUMBERMAN, Toronto.

### WANTED—ORDERS.

I AM OPEN FOR ORDERS TO CUT OAK, elm, ash, butternut, beech, maple, basswood scantling and dimension timber this winter. D. LEVY MACDONALD, Rigaud Saw Mills, Rigaud, Quebec.

### WANTED FOR CASH.

FOR PROMPT DELIVERY: 10 CARS 1", 6 cars 1¼", 2 cars 1½", 1 car 2" black ash firsts and seconds; 3 cars each 1", 1¼", 1½" soft elm firsts and seconds; also 1 car each 3 x 3, 4½ x 4½, 5 x 5 soft elm squares 8 feet and up long, firsts and seconds. If you can furnish any of the above, state dryness, freight rate to New York, and full particulars, quoting lowest price per M ft. Address, P.O. Box 2144, New York City.

## MILL FOR SALE

SITUATED ON SALMON RIVER, VIC. CO., N. B., consisting of six Shingle Machines, Rotary Gang Edger, Lath Machine and Clapb ard Machine. Water Power, with a never failing supply of water. Will cut the present season four million of deal, sixteen million of shingles and four million of lath.

There are 100,000 acres of timber land under lease, well stocked with cedar, spruce and hardwoods, to supply the mill with lumber. The mill property consists of 100 acres of land.

On the above property is a large store storehouses, boarding-house, blacksmith shop and a large stable There are also six tenement houses. An electric light plant lights mill store blacksmith shop and stable.

This property is situated in the parish of Drummond Victoria county N.B. seven miles below Grand Falls., For further particulars enquire of

STEVENS LUMBER CO.,
Grand Falls, N.B., or Fort Fairfield, Maine.

### PRODUCTION OF SQUARE TIMBER.

From information in our possession we are led to the conclusion that, if present arrangements are carried out, the production of square and waney timber the coming season will be equal to, or exceed, that of last winter. Owing to the uncertainty of the lumber market, we learn that some manufacturers who have heretofore confined their operations to lumber are this year turning their attention to square timber. We fear that this may result in a very heavy production and consequent overstocking of the market, as was the case last season. Already the Quebec merchants have lowered their quotations on small average waney pine, while ash and birch timber have all season been dull of sale in the British markets. The outlook for the timber trade is by no means sufficiently bright to warrant a heavy output, and we venture to predict that manufacturers will act in their own interests by curtailing production. Better to make a fair profit on a small output than to operate extensively and be compelled to dispose of your timber at a figure which barely covers the cost of production.

### CURRENT TRADE CONDITIONS.

ONTARIO

General satisfaction is expressed at the volume of the local lumber demand, and prices have strengthened considerably within the past few weeks. There are indications, also, that this demand will continue until quite late in the fall, as there are several works of construction that will be carried on until weather conditions shall cause operations to cease. Retail dealers in the smaller towns report a fair trade with the farmers and for local building operations. But unfortunately there is little activity in the United States trade. Some purchases of lumber are being made at good prices, but there is no volume to the business. In hardwood special stock is selling to American houses, and inquiries for elm and basswood are increasing. The one dollar duty on the latter wood seems to have had little effect in preventing importations. There is also more doing in shingles, prices on the other side having advanced to a point where the duty is llttle hindrance to trade.

QUEBEC AND NEW BRUNSWICK.

Quietness rules in the Quebec timber market at the present time. Owing to the high freight rates and the weakening of the British market the stock of waney pine wintering at Quebec will be heavy, and in other classes of timber there will also be a considerable quantity carried over. Small average waney pine is in little demand, and a slight fall in wholesale prices has taken place, as will be observed by the quotations given on the fourth page. This is attributable to the heavy production of that wood last winter, resulting in overstocking the market. Birch and ash timber are also drugs in the English markets, the quantity manufactured for some years past being greatly in excess of the demand, and the only way to remedy this is for operators to keep down their production to the lowest possible point this winter. No new features of importance have developed in the spruce trade. The purchase by a Quebec firm of the 1897 cut of a Three Rivers manufacturer is recorded in another column. In New Brunswick and Nova Scotia it is difficult to give quotations, as there is practically no buying to report. Light shipments are being made to Boston, consisting chiefly of the larger sizes. Last week one cargo sailed from St. John for a British port, one for France and one for Buenos Ayres, and two vessels have just completed loading for Australia. From information at hand we are still of the opinion that the cut of logs this winter will be greatly reduced as compared with last year.

MANITOBA AND BRITISH COLUMBIA.

The report of a healthy demand for lumber comes from Manitoba. The farmers are busy marketing their grain and making repairs to buildings. In British Columbia the lumbermen view with disfavor the winding up of the Pacific Pine Lumber Company, of San Francisco, which fixed the price of lumber on the coast. It is feared that unhealthy competition will follow, as the organization has done much to extend trade with foreign countries. Of local conditions there is little new to report. Most of the mills are running, and have large orders for building materials. The planing mills are particularly busy.

UNITED STATES.

The lumber trade of the east is still backward. Depending as it does upon a general improvement in manufacturing, and being but little benefitted by the abundant crops in the west, the return to more prosperous business has been slow. The past week has shown some progress towards larger demand and better prices, but for some unaccountable reason retail dealers are not purchasing white pine lumber as liberally as might be expected. There is an apparent disposition to purchase only for immediate requirements, a policy which became very general during the late depression in the trade. The New England demand is growing, and some heavy purchases have been made by wholesalers in anticipation of good business. Buffalo has been anticipating better prices for some time, but it cannot be said that anything in that direction has been accomplished. General satisfaction at the outlook is expressed, and there are many dealers ready to buy. It is probable that Buffalo and Tonawanda will go into the winter with light stocks. Reports from Michigan tell of an improved market. In New York there is a better feeling, but dealers are of the opinion that it will be next spring before the full benefit of the improved conditions will be realized. The Boston market, so far as spruce is concerned, is quiet, and all efforts to advance prices have been without result. The furniture factories are busy, resulting in an active consumption of hardwoods. The distribution of hardwoods has shown a gradual expansion throughout the month, enquiries being for all classes of stock. Basswood

quotations are firmer, and elm has maintained its position. The railroads are requiring large quantities of heavy oak.

FOREIGN.

Despite the interference to trade caused by the engineers' strike, a fairly satisfactory volume of business continues to be done at the chief British ports. Naturally the timber trade would feel the effect of the labor troubles, but in the face of the restricted demand for wood goods for shipbuilding purposes, it is gratifying to observe the steady consumption. This is largely the result of the activity in house-building. But unless the engineering dispute reaches a settlement in the near future, it is likely to be a strong factor in framing the course of the early spring trade of 1898. As yet very little buying for next season's business has been done, as importers are not anxious to contract too early, the heavy stocks of Canadian goods to be carried over this winter making it unnecessary to rush the market and thus force f.o.w. prices up again. Imports for this year will be concluded in a couple of weeks, and then attention will be turned to the coming spring's trade. White pine deals of good quality are strengthening and seconds are also in good demand. There is a very small stock of thirds on hand at London, but fourths are dull of sale. The lowering of spruce prices has caused a heavy consumption of that wood, and this will assist materially in its early recovery. At Liverpool a fair amount of business has been done in square timber and deals. A scheme is on foot to improve the central docks there, at a cost of £3,316,000. Several transactions in pine and spruce deals have taken place at Glasgow.

## STOCKS AND PRICES.

CANADA.

F. Gagnon & Fils, of Baie St. Paul, Que., are taking out a large quantity of logs this winter.

Logs will again be cut the coming winter, on the Murray river, for Messrs. Leclerc & Letellier, of Quebec.

E. L. Kelsey, of Detroit, is again taking out a quantity of pine, elm and oak timber in Ohio and Michigan for the Quebec market.

The Perry Lumber Co. are reported to be preparing to cut about 150,000 cubic feet of waney pine in Michigan for Quebec delivery in 1898.

Mr. John Bradley, of Hamilton, Ont., wants poplar, white and red oak, plain and quarter cut, 1 to 3 iuches thick, all firsts and seconds.

A. Barnet, Renfrew, Ont., has recently sold his raft of square and waney pine timber at Cap Rouge Cove to Dobell, Beckett & Co., of Quebec.

McCormack & McLeod are taking out about 200,000 feet of waney and square pine timber in the Georgian Bay district for the Quebec market.

The McArthur Company have sent a number of men from Ottawa to their limits on the Georgian Bay. A gang has also been sent to Fort William.

B. B. Barnhill has purchased Robert Pugsley's interests in the company recently formed at Amherst, N. S., to operate the Exploits Lumber Co. property at Newfoundland.

It is believed that a vessel laden with hardwood lumber was lost in the storm near Port Stanley, Ont., on the 11th inst. A lare quantity of hardwood has been picked up along the shore at Port Bruce.

Messrs. H. R. Goodday & Co. have bought the 1897 cut of spruce deals manufactured by Mr. Alexander Baptist, Three Rivers, Que. The quantity is estimated at from 275,000 to 300,000 Quebec standards.

The Sutherland, Innes Company, of Chatham, Ont., report a great scarcity of No. 2 staves. They have sold all their stock of this grade for export.

The Chicoutimi Pulp Company, of Chicoutimi, Que., has decided to award contracts for 300,000 logs for pulp manufacture, including black and white spruce. The contracts will be awarded by divisions.

Bark Prince Patrick, which arrived at Herring Cove, N.S., on the 15th inst. to load deals, makes the third large vessel that loaded there this summer. Five steamships also took deals from Herring Cove.

Harry McLellan, of St. John, N.B., has recently acquired what is said to be a magnificent timber limit on the north shore of the St. Lawrence, below Rimouski. He will immediately erect a saw mill on the property capable of cutting four million feet annually.

The Niagara Falls Paper Co., at Batchewanna Bay, is taking up about one hundred and fifty men to their camps, where they will have upwards of three hundred men at work. They purpose taking out 100,000 cords of pulp wood, besides a large amount of pine timber, this winter.

John Millard has purchased one thousand acres of timber land at Pesquis, N.B., from James McGuire. Messrs. Innes, Hemeon & Co., Liverpool, have purchased from N. F. Douglas and Alton Freeman between ten and eleven thousand acres of timber land, located at Tobiaduc, N. E. bay and N. branch of West river.

The Kolnische Zeitung urges Germany to open negotiations between the Canadian railway and canal companies and the German chambers of commerce and timber firms, with a view of importing lumber from Canada instead of the United States. The paper suggests that German capital might be introduced into the Canadian timber trade and the foundation laid that would lead up to the actual treaty.

It is reported that a syndicate have purchased large timber limits in Haliburton county, and intend operating on an extensive scale. There will probably be a number of saw mills started through the township, which will cut birch, beech, maple and black ash into furniture wood for exportation to France and England. There will, it is said, be a large saw mill in this village employed in cutting veneers, and here will be the center of the operations. Pulp wood and cedar will be exported from this point.

The stock of timber and deals that will winter in Quebec and vicinity during the coming winter is expected to be rather larger than usual. The scarcity of tonnage and high freights ruling, together with the engineers' strike in England, have all contributed to keeping large quantities of timber and deals on this side which otherwise would have gone forward. The engineers' strike has had a very serious effect on the consumption in the English markets, but when a settlement is arranged a fairly good demand is anticipated.

FOREIGN.

E. E. Price & Bro., Baltimore, Md., want dimension ash.

G. Elias & Bro., Buffalo, N.Y., are in the market for white ash, basswood, rock elm, hickory and hard maple.

A Maine paper notes the receipt at Winter Harbor in that state of 150,000 red cedar shingles from the Pacific coast.

The Belding-Hall Manufacturing Company, Belding, Mich., are in the market for from 35 to 50 car loads of inch black ash, cut up into small pieces.

Cutting-up stock, one to two inch, and wide fine common and selects are in good demand at Tonawanda. Barn boards and shingles are also good sellers.

At Manistee, Mich., piece stuff, common inch and shingles are being purchased as liberally as offered. Nearly all the available stock of hemlock has also been sold out. The price is $5.50 and $6.50 on dock there. Shingles sell at $2.15 and 6 inch at $1.20 to $1.25.

A large amount of new work has been mapped out since October 1st at Philadelphia, and it is estimated that a good consumption of hardwoods will continue until late in the season.

The saw mill of Smalleys & Woodworth, Bay City, Mich., has been running day and night all season. The firm has purchased all the Norway and pine logs of the Holland & Emery Company.

A number of Buffalo dealers have lately visited western lake points, but few lumber purchases are announced. It is quite probable, however, that considerable lumber has been purchased for spring shipment, as is usually the case.

W. H. Gilbert, of Saginaw, and P. H. Ketchum, of Kansas City, have sold to Canadian parties their timber limits on the Maskinonge river, near Montreal. The timber is mostly cedar, and the purchasers will take it off and convert it into lumber and pulp-wood. The consideration was $40,000.

E. V. Babcock & Co., of Pittsburg, Pa., has purchased a tract of 6,800 acres of timber lands in Somerset county, Pennsylvania. The deal is said to represent an outlay of a quarter of a million dollars. Upon the property there is estimated to be 120,000,000 feet of hemlock and 30,000,000 feet of hardwood, including maple, beech, birch and cherry. Logging operations will be commenced at once.

In 1898 production of red cedar shingles on the Pacific coast promises to be heavy. In Washington there has been so much talk of a boom in shingles that a number of new mills are being erected, and old mills are being increased in capacity. It is quite possible that the production will be overdone and the market collapse, as unhealthy competition is almost certain to follow when manufacturing is carried on too vigorously.

There is a good demand for piece stuff at Saginaw, Mich., and box is also in better demand. Common to fairly good lumber runs at $14 to $20 and upward. For box the market is steady and reasonably firm at $8 to $9; piece stuff runs from $8 to $8.50 for short lengths and $9 is asked for all over 18 feet in length. One Bay City concern has sold 5,000,000 feet since the first of September, and several cargo lots were sold there last week.

Trade at Duluth is good, as freight rates have not advanced over $1.75 to Lake Erie points. Cull boards are scarce. A Tonawanda firm bought a cargo of scoots and a cargo of No. 4 boards last week. Clark & Jackson sold last week to the Cleveland Box Company 5,000,000 feet of mill culls to be cut this fall and shipped in the spring. The stock of unsold lumber on docks at Duluth is only about 75,000,000 feet, while last year it was 140,000,000 feet and in 1895 235,000,000 feet.

## HICKORY WANTED.

A subscriber of THE LUMBERMAN wants 100 pieces second growth hickory, 3 ft. 9 in. long by ¾ in. square, well seasoned, straight-grained from end to end, and free from knots. These strips are wanted for handles for golf clubs, and must be of first-class quality. We should be pleased to learn of any person in a position to supply this stock.

## GLASGOW TIMBER STOCKS.

The quarterly statement of stocks of wood on the Clyde has been made up to 30th September, and shows an increase in nearly all classes of deals and other sawn wood when compared with the quantity held at same time one year ago. First pine deals are at present stocked at 346,737 cubic feet, as against 215,000 cubic feet last year. Second pine deals at 102,431 cubic feet are about 60 per cent. heavier. Third pine deals at 344,236 cubic feet are fully a third heavier, and fourths at 391,529 cubic feet as compared with 272,739 cubic feet last year. Pine planks of 2 inches and under are in stock to the amount of 212,752 cubic feet, as compared with 134,000 cubic feet last September. Red pine deals are the exception, and are lower this year by 23,000 cubic feet. In spruce deals, including Quebec and Lower Ports, the stock at present held is large, and is nearly 50 per cent. more than last year, the figures being 1,218,022 cubic feet, as against 873,811 cubic feet. The above includes the quantity in consumers' hands as well as importers, and although there is a large stock, it is also to be borne in mind that the consumption of deals has gone up very considerably. Quebec waney boardwood is slightly over the stock of a year ago, but is balanced by the lower stock in square white pine and red pine. Oak, elm and ash logs and planks are considerably higher. Oak planks and boards are heavily stocked at 95,743 cubic feet, as against 30,379 cubic feet a year ago

## SHIPPING MATTERS.

The Norwegian ship Elfi has finished loading deals at St. John, N. B., for Australia.

The s. s. Cheronea has been chartered to load at St. John, N. B., for w. c. England, deals, 47s 6d.

The s. s. Greta Holme has recently been fixed for a deal cargo to London at 50s 5d per St. Petg Std. Hd.

Sch. Syanara, now on her way to St. John, N. B., from Sydney, proceeds to Tusket to load lumber for Ponce, P. R., at $4.50.

Sch. Lewanika, now on the way to Halifax from New York, is chartered to load lumber at Liuerpool, N. S., for Teneriffe at $650, American gold.

Ocean deal freights from the St. Lawrence are slightly easier owing to a falling off in the supply of general produce, but rates are not expected to weaken materially for the balance of the season.

**WANTED**

500,000 18" good 6 inch c. b. Pine and Cedar Shingles; also Oak Bill Timber cut to order, 12 to 50 feet in length.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Arnprior to Montreal, $1.50 per M ft.; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.: Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. To New York for boat delivery, lots 50 M ft. and over, $2.50 per M ft., under 50 M feet $3.25 per M ft. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Boat delivery, lots 50 M ft, and over $3.00 per M ft., under 50 M ft. $3.75 per M ft Parry Sound, $4.00 per M feet; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c. From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, Toronto, Hamilton and Buffalo, and Michigan Cenrtal Railways, the rate is 14½c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and an advanced rate is charged for hardwoods.

## THE LATE MR. F. B. ROBB.

The particulars of the sad death of Mr. F. B. Robb, of Amherst, N. S., are already known to readers of this journal. Deceased was secretary-treasurer and manager of the Robb Engineering Co., Limited, and was drowned while bathing at Fox Harbor, N. S., on July 20th. He was born at Amherst, Nova Scotia, on the 8th of November, 1857. His father, the late Alexander Robb, was one of the pioneer manufacturers of Nova Scotia, having established in 1848 the business which has since developed into the Robb Engineering Company.

The subject of our sketch received his education at Cumberland County Academy and Dalhousie College, Halifax, afterwards being especially fitted for his work by a short experience in banking and commercial college course at St. John. In 1876, when only 19 years of age, he, with his brother, D. W. Robb, now president and engineer of the company, took the full management of the extensive business in which he labored up to the time of his death.

Mr. Robb's strongest characteristic was unceasing industry both of body and mind. Having a love of work, and being gifted with quick

The Late Mr. F. B. Robb.

perception and methodical habits, he was able rapidly to master every detail of his work, and has been largely instrumental in building up the Robb Engineering Company's business, which has during the past few years extended to all parts of Canada.

The late Mr. Robb had a very sympathetic nature, and early in life was impressed by deep religious feeling, which prompted him to take a prominent part in the work of every religious and charitable organization that came in his way. There are probably few men who have done more personal work in the way of assisting others, especially boys and young men, and by acts of kindness and good council leading them to a higher plane of living both morally and physically. Mr. Robb was an elder and active member of the Presbyterian church of his native town. He was especially interested in the Y. M. C. A. work among boys and railway men, being chairman of the Y.M.C.A. Railway Branch. At the time of his death he was assisting in the management of the Y. M. C. A. Boy's Camp, which every year gathers the boys for an outing at some one of the lovely spots on the sea coast of Nova Scotia or New Brunswick. Through his intense desire to do good he was able to wield a large influence, not only in his own town, but in many districts all over the maritime provinces.

In 1883 Mr. Robb married Miss Jessie MacFarlane, neice of Senator MacFarlane, of Wallace, who, being also devoted to the work of religious organization, has been a congenial companion and helper in this department of his labor. She with her three children have the sympathy of many who mourn the loss of one who was ever a true friend.

## CANADIAN WEST INDIA TRADE.

We are in receipt of a pamphlet from Mr. J. A. Chipman, Halifax, N. S., entitled "Canadian West India Trade," which gives valuable information regarding the prospects for extending our trade with the West Indies. Mr. Chipman points out that although some ten years ago the government of Canada granted a subsidy of $95,000 to steamers engaged in the West India trade, with the chief object of developing the interprovincial and western Canadian business, the province of Nova Scotia still continues to furnish the great bulk of the exports.

During 1895 the value of the exports from Canada to the British West Indies alone was $1,855,017. Turning to the returns for 1896, we find Nova Scotia exported forest products to the West Indies to the value of $86,053, while the figures for Ontario are given as $204. With British Guiana, St. Domingo, Honduras, and the Danish, French and Dutch West Indies, the contrast is equally as great. Nova Scotia shipped to the Spanish Islands forest products valued at $98,000.

Referring to the Quebec trade, Mr. Chipman says:

"There is one branch of this Quebec trade upon which I wish to give more than a passing notice. It is the manufactures of wood. There are over one and a quarter million dollars worth sold to the British West Indies alone, of which the United States do between $700,000 and $800,000 annually, and Nova Scotia and New Brunswick the balance. What is to hinder the Ottawa district, and the different manufacturers of their wood, to not only capture this trade of $800,000 from the United States, in the British possessions, but to follow that competition not only into the foreign West Indies, but into South America as well? Quebec supplies the United States with this wood or lumber, and they manufacture and ship it out to southern countries. You say "This looks well, but how is this trade to be secured? The few orders which we have had from the West Indies have been too small and troublesome to warrant us in changing our mode of manufacturing." True; and so it will ever remain, unless you make up your minds that the trade is worth having, and that you will have it, and the whole of it at that. The late Senator Macdonald, of Toronto, told you that it would be yours for the having. You must send men out there, if you cannot obtain all the information and specifications in New York,—men who are capable of taking specifications and all particulars and details necessary to intelligently undertake this work. You naturally say, "this manufactured goods is bulky stuff; how are we going to ship it even if we had the orders?" I have already shown that this present steamship subsidy belongs to you; that Ontario and Quebec can be exporting a million dollars' worth of the natural and manufactured productions of the two provinces, chiefly the products of the farm, within a year of getting actively into the West Inda market taking orders. These shipments, augmented by your shipments of manufactures of wood, are more than sufficient to guarantee full loads for a fortnightly line of steamers from the port of Montreal direct to the ports of the West Indies, calling each way at Quebec City, Summerside and Charlottetown, in P. E. Island, and Halifax or St. John, N. B. P. E. Island exports $93,000, which would be increased to $150,000 if she had direct steamers. Nova Scotia alone exported to the British West Indies, including British Guiana, nearly two million dollars' worth in 1895. The Blue Book's figures are $1,672,712, and to all the West India Islands, $3,449,585, so that you can readily see that steamers loading at Montreal during open navigation may expect that any space unfilled at Montreal will be filled at the lower ports. In point of fact any available space at Montreal could be filled with a cargo for the lower ports, which would be replaced at those ports by cargo for the West Indies and coal for the round voyage."

The C. P. R. have shown their desire of cultivating this trade by sending their commercial agent throughout the West Indies. This agent has recently visited Bermuda, St. Thomas, St. Croix, St. Kitts, Antigua, Dominica, St. Lucia, Darbados, Trinidad and Demerara, and reports that Canada is in a position to greatly increase her exports. To encourage the trade the C.P.R. state that they are giving the same export rates to the port of St. John as are current from the same shipping points to New York, and the steamship rates from St. John to the Islands are the same as from New York. As far as freight rates are concerned, therefore, the Canadian manufacturer has an equal advantage with his rival in the United States.

Mr. Chipman is devoting his time and energies to the development of the West India trade, and would be pleased to receive the co-operation of lumber manufacturers. He will probably leave for the West Indies about the 15th of November.

## WOOD-WORKING MACHINERY.

We beg to call attention to the advertisement on another page of this issue, of the A. R. Williams Machinery Co., Limited, Toronto, with branch offices at 193 Colborne st., Brantford; 345 St. James st., Montreal, and the London Machine Tool Co. at London, Ont. This firm carries the largest stock of wood-working machinery, both new and second-hand, of any house in the Dominion, including planers, matchers and moulders, band sawing machines, re-sawing machines, shapers, tenoners, etc., making it possible for them to fully equip furniture factories, planing mills, etc., on the shortest notice, and on easy terms of payment. They also have a large stock of saw mills on hand for prompt delivery, as well as several mill sites, including land, buildings and machinery, all in place ready for operation.

They are also Canadian agents for the B. F. Sturtevant Co.'s celebrated dry kilns, heaters, fans and blowers; S. J. Shimer, Sons & Co.'s matcher heads, and E. Harrington, Sons & Co.'s well-known hoists. Parties requiring additional machinery will do well to write this firm for their newly-issued stock-taking list, No. 41, giving specifications of their requirements, which will have prompt and careful attention.

Persons writing to advertisers in The Lumberman are requested to mention the source of their information.

## LUMBERING OPERATIONS IN NOVA SCOTIA.

[Correspondence of the CANADA LUMBERMAN.]

THE lumbering industry has been very quiet during the past month in Nova Scotia, owing to a fall in prices in the English markets and an advance in freight rates, together with extreme drought. The latter part of the season was so dry that reserve logs could not be got to a good many of the mills, which was probably fortunate now that the difference in value in the English market since spring is so great. Taking the season for sawing as a whole, it has been considerably above the average so far as water mills are concerned. The wet spring was very favorable for getting the logs to the mills early, so that sawing began in good time, and the continuance of wet weather enabled most of them to get their cut through by July or August, which is a very unusual occurrence, as they generally have to finish up the sawing season with fall rains.

The general feeling for the coming winter's operations is that about the average stock of logs will be cut throughout the province. The English deal operations will probably be somewhat under those of last year's, and the average kept up by the hope of a revival in the United States, South American and West Indian markets.

The Gold River Lumber Co., Gold River, N.S., have finished sawing for the season. They had a very good year's business; the winter was favorable for logging and the spring very favorable for driving, resulting in all their logs reaching their pond with good water. Their fine steam gang mill being in good order, ran without interruption until the stock of logs was sawn, thus enabling them to clean up their operations earlier in the season than usual. Their cut was about two and a half million feet, nearly all of which was deals for the English market. Formerly they sawed for the South American and Boston markets, and deal sawing was an experiment with them, but it has been satisfactory. They expect to operate the coming winter to about the same extent as last season.

Messrs. E. D. Davison & Sons, Limited, Bridgewater, have done a very large business this season. Their logging operations last winter resulted in the neighborhood of twenty million feet of logs being got into the water and practically safely to their large mills at Bridgewater. The water kept up well through the summer, so the mills ran a good part of the time day and night. Their mills, yards, stores and houses are all lighted by electricity, by a complete plant of their own. Their cut this year has been largely deals, but they do not confine themselves to any particular market. Net financial results is their prime object, and being in touch with all markets, they manufacture and ship to those giving the best financial results. Mr. Frank Davison is president and manager, and Mr. Archie F. Davison secretary-treasurer of the company. The high business standing attained by the late E. D. Davison, the founder of the company, and continued and increased by his son, the late C. Henry Davison, will not suffer under the present management. Owing to the extensive drought, their mills are not being operated fully at present. The outlook for lumber for next season does not point to quite their usual output this winter.

W. & G. Colp purchased a timber property between Mill Village and Brooklyn, N. S., and have engaged Mr. Isaac Harnish, of Greywood, to put his large portable saw mill on it to saw during the winter. They expect to cut about one million feet of deals, and also intend getting out a large quantity of pulp-wood to ship to the best paying market.

J. & J. Coop, Milton, with mills at Brooklyn, will get out about the usual quantity of logs—one million feet. They also intend going into the pulp-wood industry and fitting up their mill for the purpose by putting cutting-off saws and barkers into a building adjoining their saw mill.

Harlow & Kempton, Milton, are taking advantage of the low water in the river to put another water wheel in their saw mill, and to give it all necessary repairs for a good season's cut next year. Their output this season was about two and a half million feet, and they intend operating on about the same scale the coming season. Their cut this year was principally for South American, West Indian and Boston markets.

Eldred Minard, Milton, has a gang mill, water power, in which he cuts about three-quarters of a million feet, custom work. He expects to cut about the same quantity next season.

Allen & Henry Tupper, Milton Cove, put a new live gang into their mill and made other changes and improvements while the water was low in the river. They saw boards, pine, spruce and hemlock, shipping to American and southern ports. They also manufacture boxes for all purposes.

John Millard, Liverpool, has a saw mill at Milton with rotary saw, stock gang and patent edger. He has not run his mill fully this season, but expects to saw four to five million feet next year. Mr. Millard and Ira P. Freeman have a gang mill at Milton in which they cut about one million feet this season, and intend sawing about the same quantity next year.

H. W. Freeman, Jordan River, has had a very good season for operating his water power gang mill, having cut about three million feet. He is putting in two of the famous Buchanan water wheels in place of Leffel turbines, a new rotary saw mill, made by Burrill-Johnson Iron Co., Yarmouth, a patent three saw edger, made by the Lloyd Mfg. Co., Kentville, N. S., and besides is overhauling his gang mill, shafting and all other machinery in the mill. His intention is to saw six million feet next season. Mr. Freeman has added largely to his timber limits by the purchase of the Doull property adjoining his limits on Jordan River. This property has not been operated for some fifteen years, and is reputed to have a large quantity of good timber.

Young Bros. & Co., Limited, St. Margarets Bay, have about completed their cut for this season, which is nearly six million feet. One million of this was hemlock and the balance spruce. Their operations will be about on the same scale this winter at the head of St. Margarets Bay, while at Ingram River, five miles west, they intend to get out a large quantity of piling and pulp wood. This company owns an immense tract of timber land along the coast, reaching from the head of St. Margarets Bay to East river, a distance of twenty miles, and extending back fifteen to twenty-five miles. There are four large streams through the property and entering the Atlantic ocean at different points along the coast. The value of the stumpage of one river is said to be one hundred thousand dollars.

W. J. P.

## SAWDUST IN THE OTTAWA RIVER.

SIR Louis Davies, Minister of Marine and Fisheries, has notified all lumbermen on the Ottawa river that there will be no further postponement of the law which was enacted to prevent the dumping of sawdust into the river. The law will be allowed to come into force on the 1st of July next.

The act prohibiting the dumping of sawdust into the Ottawa river was passed three or four years ago, when Sir Hibbert Tupper was minister of marine and fisheries, but the lumbermen petitioned for delay to enable them to get the necessary re-arrangements in the mills. Year after year since that time a bill has been introduced every session postponing the operation of the act, but the fear that the law will now be enforced is causing some of the lumbermen much anxiety.

Of the six big lumber firms in Ottawa two already burn their sawdust, namely, W. C. Edwards and Gilmour & Hughson. One other mill, that of the Hull Lumber Company, was burned recently, and will doubtless be reconstructed with a view to disposing of its sawdust otherwise than by the river. Wm. Mason & Sons utilize their sawdust to make ground around their mill. There are, therefore, at present, only two mills discharging sawdust into the river, namely, those of J. R. Booth and the Bronsons & Weston Company. But these are two of the largest saw mills in the world.

Mr. Booth states that he has given the question of the disposal of sawdust some serious consideration, but could not arrive at any solution of the problem. The difficulty was owing to the construction of the mill. This is also the case with the Bronsons & Weston Company. Asked if the sawdust could not be burned, Mr. Crannell replied that the question was how to re-arrange the mills and put in machinery to carry the sawdust to the incinerator. He explained that the large mills that have been in operation for from 20 to 40 years were built very close to the water level. Under the mills was a network of beams and girders, which it was impossible to remove. The mills could not possibly be altered to provide for the disposal of sawdust in any other way than at present. The question was one, he said, which had caused much discussion among the members of the firm, and none had been able to work out a satisfactory solution. Mr. Crannell thought it would be a great mistake to enforce the law in the case of old mills. A law might be passed forbidding all new mills that should be erected from depositing the sawdust in the river, and compelling the owners of the old mills, whenever their mills were being reconstructed, to provide other means of disposing of the sawdust.

The mill hands, fearing that the law may effect their interests, called a meeting to discuss the question, at which it was resolved to form an association. It is probable that this association will memorialize the government to exempt the two firms above mentioned.

## THE BRITISH COLUMBIA LUMBER INDUSTRY.

A correspondent writes to The Lumberman as follows regarding the condition of the lumber trade on the Pacific coast :

"The lumbermen out here are to a man indignant at the Dominion government having left them in the present helpless state as regards the tariff. It would almost appear as if, beyond our own members and a few who have honored our province with a visit, British Columbia is hardly regarded as a part of the Dominion, and our conditions and requirements are either practically unknown or largely disregarded. Business this year will show a marked improvement on previous years, both in lumber and shingles. For some unaccountable reason the price of shingles has not as yet advanced with the demand, as has been the case across the line to the south of us, where their No. 1 shingles, cut 6 butts to 2 inches scant, are now netting them $1.35 at the mills, while ours, cut heavier and much more carefully made and sorted, are only bringing from 5 to 10 cents less. Some steps have been made to advance prices, but the possibility of American competition has discouraged anything being done in this line. The mill men are experiencing very great difficulty in procuring timber for shingles, as the prices they are able to pay the loggers and come out on the right side has been so low that many of the loggers have abandoned the work for more profitable employment, and the mills have only been able to run when timber was procurable. This state of affairs will assert itself more strongly in the future."

A representative of the Pacific Lumber Trade Journal made a trip through British Columbia in September last, and writes as follows of his observations :

There are six lumber concerns at Victoria that manufacture lumber. The first one visited was that of the Taylor Mill Co. This concern has a capacity of 25,000 feet daily, and in addition has a planing mill and sash and door factory. Besides carrying a large stock of sash and doors, this company has on hand about 1,500,000 feet of lumber. Mr. Taylor tells me that while the lumber business with them is much better this year than it was last season, yet it is not good, and that they only run about half time, with no improvement in prices.

The next mill I visited was Lemon, Gonnason & Co., Capital Planing Mills. This concern saws no lumber from the log, but does a large business in sash and doors and salmon boxes. They also do quite a business in boat building, and are at present building several to ply on the Yukon river between Dawson City and St. Michaels.

The Shawnigan Lake Lumber Co.'s mills are located at Shawnigan Lake, about 20 miles from Victoria. This concern has yards both at Victoria and Wellington, and do quite a large business. Capacity of mill is 40,000 feet, and they employ about 60 men. Lumber from the mill at this lake is carried to Victoria and Wellington on the Esquimalt & Nanaimo Railroad, which runs between Victoria and Nanaimo, a distance of 100 miles. This concern has on hand about 3,000,000 feet.

James Leigh & Sons have a saw mill in Victoria, with a capacity of 40,000 feet, also a large planing mill, and are well equipped to do a large business.

Joseph A. Sayward has the largest saw mill plant in Victoria. The mill proper has a capacity of 50,000 feet daily and employs about 75 men. This concern manufactures lath, shingles, and all kinds of mouldings, and does the largest business of any lumber concern in Victoria. Mr. Sayward is one of the oldest saw mill men in British Columbia, and is well known to the trade. This concern, while doing quite an export trade, is preparing to capture a share of the eastern rail trade, and are now building a large dry kiln for drying lumber, and are also building a lumber barge, with a carrying capacity of 250,000 feet. At present the mill is running about three-quarter time.

The largest sash and door factory in Victoria, and also the oldest, is that of Muirhead & Mann. This mill concern is known as the Victoria Planing Mills, established in 1875, and during flush times in Victoria did a good paying business, and is now one of the largest and richest sash and door concerns in British Columbia. At the present time the company has a $300,000 contract for furnishing all material in lumber and inside finishings for the new parliament buildings, which will cost $1,500,000, and also a contract to furnish the inside furnishing for the Bank of Montreal.

From Victoria you take the Esquimalt & Nanaimo Railroad and go north about twenty miles to Chemainus. Here you find the largest saw mill on Vancouver Island, and one of the most prominent on the Pacific coast, being 84 feet in width and 453 feet in length, with a capacity of 110,000 feet daily. This is the capacity of only one side, as the other side is not equipped, but will be by the first of the year, as the management is now negotiating with the different machinery houses and saw concerns for the necessary equipment to make the mill second to none on the coast. The company employs in the mill 75 men, and in six logging camps 120 men. The mill is run day and night, and has been for the last eight months. Perhaps no mill on the Pacific coast is as well equipped for sawing long timber as this mill, and perhaps no other mill on the coast has as fine timber to cut from, for I believe that at no other place on the coast does the timber grow so tall as on this island. Timber on the main land in British Columbia and in many places in Washington and Oregon grows to be much larger in diameter, but not nearly so high. This concern has, in addition to their saw mill plant, one of the finest bodies of timber in British North America. It was purchased from the Canadian government several years ago. The survey was made under the supervision of E. J. Palmer, the present manager, and was surveyed in such a manner that the company got the cream of the timber on Vancouver Island. The company owns all to 90,000 acres of timber, estimated at 6,500,000,000 feet, mostly fir. This company has very little lumber in stock, as they only cut for orders on hand. Mr. Palmer tells me that his trade is increasing every year, and that he has no trouble in getting a fair price for his lumber. I must say right here that at no mill that I have visited on this coast—and I believe I have paid a visit to all the big lumber mills—have I found a mill crew better paid or better fed than at this mill. All the employees of this company seem to be perfectly satisfied, and have no word of complaint to offer. I have heard so much kicking from the mill men of Puget Sound about the cheap Chinese labor of British Columbia, but let me say right here that while in British Columbia I visited all the mills in Victoria, Vancouver, New Westminster, Chemainus and Nanaimo. and all the time I was looking out for that Chinaman that the Puget Sound saw mill man told me I would find as sawyer, filer, engineer, planing mill foreman, and holding all the jobs in the British Columbia mills ; but as a matter of fact, after visiting all the mills, I only found working in the mills 10 Chinamen, and they were unloading slabs at the Royal City mills in Vancouver, and they were employed, so the foreman told me, because they could not get white men, as so many were salmon fishing on the Fraser river. No, this cheap labor of British Columbia is all a fake. Now, let me give you the wages paid to the men employed in the Chemainus mill :

| | |
|---|---|
| Head filer, per day | $ 6 00 |
| Assistant, per day | 4 50 |
| Sawyer, per day | 4 50 |
| Gang edgerman, per day | 2 75 |
| Gang sawyer, per day | 2 75 |
| Engineer, per month | 75 00 |
| Mill foreman, per month | 125 00 |
| Talleymen, per day | 2 50 |
| Common mill hands, per day | 1 75 |

This is the wages paid to employees at this mill, and it is no fake either. The smallest wages paid at this plant is $1.75 per day.

From Chemainus I took the train for Nanaimo, about 20 miles north, the terminus of the Esquimault and Nanaimo railroad. At this place there is only one saw mill, and it is owned by Andrew Haslam. This little mill is very nicely arranged and has a capacity of 40,000 per day. The mill is well equipped with good, new machinery, and turns out a very fine class of lumber.

From Nanaimo I took the railroad company's boat and went across to Vancouver, a ride of only about three and one-half hours. I found all the mills running full blast. The Hastings Mill Co. I found cutting on an order of 8,000,000 feet for the Crows Nest railroad, and loading a schooner with 1,500,000 feet of lumber for South America. Mr. Alexander tells me that while the cargo trade is quite dull, the rail trade is first-class and prices picking up. The Royal City mills are running full blast and the sash and door factory of the plant was never so busy as now. Charles Burns, foreman, tells me that they have turned out more sash and doors and lumber at better prices in the three months past than in all the year of 1896. The company is building a cedar mill at present, and it is almost finished ; capacity of mill will be about 20,000 per day. It will be used to cut cedar only.

Spicer & Co. are not making as many shingles as they were a year ago. They have cut down their capacity from 350,000 to 160,0000. Prices, Mr. Spicer tells me, are much better now than one year ago, but his market has been shut off to some extent by the American tariff.

The Vancouver Cooperage & Jute Co. is running full capacity and doing a much larger business this year than last.

The Vancouver Sash & Door Co. are doing a

big business, having orders on file for all they can manufacture.

Robertson & Hackett have orders for more sash and doors than they can fill, and are preparing to move to another location, so they may be able to build or give them more capacity. This concern has a sawmill in connection, with a capacity of 20,000 feet per day.

The Moodyville Lands & Saw Mill Co., at Moodyville, are running full time, and are sawing on cargo orders for two schooners. Mr. Wood, the manager, says the cargo business with them is picking up, with prices better than last year.

At New Westminster the mills are running full time on orders for rail shipment. The Royal City Mills branch at this place is doing a big business in sash, doors, salmon boxes and mouldings.

The Pacific Coast Lumber Co.'s saw mill is not running at present, having shut down for the want of proper help, the men having gone off salmon fishing. The shingle mill is running, however, full time, and is making as fine a shingle as I ever looked at. The shingle saws at this mill are upright instead of flat, as our shingle saws are on the Sound, and while the saw will not saw as many shingles in the same time as the American shingle saw, they make by far a more perfect shingle and are more satisfactory to the trade. This concern has on hand the finest stock of vertical grain cedar lumber on the Pacific coast, all nicely piled and housed in sheds.

The Brunette Saw Mill Co. are doing by far the largest business of any mill in New Westminster. This concern is obliged to run overtime in order to supply the demand. This concern has a new manager in the person of Mr. L. A. Lewis, who was, until elected manager, cashier for the company. The company has on hand about 5,000,000 feet of lumber, with orders on hand for a large portion of it.

The Hastings Shingle Manufacturing Co.'s mill is located at Hastings, about four miles from Vancouver, and has a capacity of 225,000 shingles per day. The mill is equipped with the upright shingle saws, same as the Pacific Coast mill at New Westminster. The management of this concern, so I am informed, are in correspondence with parties on the American side of the line for a large tract of cedar timber, and should they be able to close the deal they will at once build a mill on this side of equal capacity with the one in British Columbia, and in this way be able to hold their customers in the States. No doubt this deal will go through all O. K., for the company is, I am told, very wealthy, and is very anxious to hold the trade they formerly had on this side.

Robert Ward & Co., Ltd., of Victoria and Vancouver, are prominent handlers of lumber, being managing agents for the Moodyville Lands & Saw Mill Co., of Moodyville.

## LUMBER IN GERMANY.

MR. Thomas Ewing Moore, United States Commercial Agent at Weimar, writes as follows of the lumber industry in Germany:

The laws of Germany governing the cutting down of forests being very severe, and the demand for building lumber, and that used in the manufactures of wood, growing annually in proportion to the industrial development and the increase in population, it follows that larger quantities of raw wood must be imported from year to year. The annual production of lumber in Germany is estimated to be 8,300,000 tons. The imports have risen from 2,800,000 tons in 1891 to 3,200,000 tons in 1896, and it is expected, for the reasons above stated, that the importations will continue to increase, while the production will remain at its present figure.

According to her statistics, Germany buys from abroad between one-fourth and one-third of the total quantity of lumber consumed. The value of such imports was: In 1891, 134,100,000 marks ($31,916,800); 1895, 149,600,000 marks ($35,604,800); 1896, 171,800,000 marks ($40,888,400).

The unmanufactured wood exported is insignificant, and fell in value from 18,400,000 marks ($4,379,200) in 1891 to 15,400,000 marks ($3,665,200) in 1896. During the same period the exports of manufactures of wood fell from 85,500,000 marks ($20,349,000) to 82,400,000 marks ($19,511,200). These figures show the importance of the lumber question to Germany. She is becoming more and more dependent on foreign countries for her supplies, and in a very striking proportion; and her export of manufactures of wood does not grow, which is explained by the increased demand at home.

The countries from which Germany draws most of her supplies are Austria-Hungary, Sweden and Russia. The former sends raw lumber in increasing quantities, while the imports for the latter are decreasing.

At the present time the supplies from the above-named lands are sufficient for the demand, but it is feared that the devastation of forests in Russia, Sweden and Galicia will, in the near future, compel Germany to pay higher prices, unless these countries bring their production and consumption into the proper proportion.

## OPINIONS ON VARIOUS QUESTIONS.

MR. James McMullen, M.P. for North Wellington, has expressed himself in favor of an export duty on logs and pulp-wood. He says: "At the last session I introduced a bill, but withdrew it, which I will probably re-introduce and press to a vote, making it unlawful for an alien to hold Canadian lands, mines, forests, etc. I believe the time has come for us to cease extending to United States citizens favors denied our citizens by the United States. A little self-assertion now will perhaps teach our American cousins more courtesy and consideration."

× × ×

Mr. H. R. McDonald, of Thessalon, Ont., referring to the resolution passed at the lumbermen's meeting in Toronto, says: "Should the Ontario government adopt the resolution, it will cripple the lumber industry of Algoma, lose the revenue for the timber, decrease stumpage 60 per cent., ruin limit-holders who invested their money in good faith, and cause a reaction against the government which will place them in the minority as soon as the people have the opportunity of expressing their opinion at the polls."

× × ×

Writing in the Toronto Globe, Mr. Wm. Leak says: "What Canada wants and should have had twenty years ago is a commercial museum for British articles either at Ottawa or Toronto, with fifty to one hundred thousand articles on exhibition, so that our manufacturers might have constantly before them what is required. In 1878 there were two Toronto firms shipping woodenware to Britain—McMurray & Fuller and Brandon & Company. As I was going over on some business the latter requested me to try and sell some spade handles, window-poles, broom-handles, and about a dozen other articles, which had been unsold in the hands of their agents for months. I took a sample of spade handles to Sheffield and Leeds. The manufacturers congratulated me on the fine wood that was in them, but refused to buy, and took me to a show-case and showed me that the handles they were using were slightly bent, while the Canadian handles were perfectly straight. It is nearly the same in everything—not exactly what the Englishman required; but if our government, or the lumber manufacturers would force the government to give the same thought, the same energy, as has been directed to the dairy interest, we should have had ån agent in Britain twenty years ago, collecting statistics of what Britain was importing from the United States and other nations, and sending to our Canadian museum samples of such goods; also gathering samples of designs for our museum, from furniture, pianos, railway car shops, ship buildings, mills, house contractor supplies and domestic woodenware that is being made in Britain."

× × ×

Mr. Wm. Creswell, lumbering foreman for M. M. Boyd & Co., has lately returned from Vancouver Island, where he went last summer to take charge of a large camp operating on the Boyd limits there. The limit, supposed to contain over 300,000,000 feet of fir timber, was acquired some years ago, together with a saw-mill capable of cutting 100,000 feet of lumber per day, but the latter was not operated this summer, as the firm were under contract to take out about 10,000,000 feet of logs for another firm. Mr. Creswell states that lumbering in that country is not prosecuted in accordance with Ontario methods. To begin with, the fir timber is all cut during the summer months, during what is known as the "peeling" season —beginning early in May and lasting till about the middle of August; the reason is that all board timber must be peeled as it falls, and after the date mentioned the sap dries and axes must be used to strip the bark, necessitating much extra labor; in fact, eight men would hardly be able to accomplish the task done easily by two at the proper season. Winter operations are confined to getting out timber for piles, which are never denuded of the bark. The fir trees are of great size, many of them containing 6,000 feet board measure, and towering over 120 ft. in height. Roads 10 and 12 ft. wide are cut into the limit as operations progress, and round logs are bedded into the earth about 8 ft. apart. When a tree is cut down it is at once sawn into sections of the required length, the bark is removed, and by means of a block and tackle affixed to near-by forest monarchs, the huge logs are drawn to the road by a "team" of six or eight horses. Being newly peeled, the logs slide easily over the skids set on the road-bed, and if trouble is found grease is applied with a liberal hand.

× × ×

Writing from Nelsonville, Algoma, Mr. James B Hammond says: "Thirteen million five hundred thousand dollars' worth of logs and lumber were exported last year to the United States from Canada, and a very large proportion of this was logs which were towed to United States mills and an enormous business done on that side in slabs; from tree tops, never scaled, and sold as fuel. Much of the product manufactured there was sent back here free, and our mills had, of course, to compete. This, for one thing, is neither fair to our farmers and laborers, our millmen, nor to our traders, manufacturers, nor any industry in this country, but it is a soft snap for the citizens of the United States. Our labor and our capital need to be clothed likewise. Again, by compelling home manufacture, an impetus would be given our farmers, settlement would be promoted, the manufacturer would profit and trade generally be improved. With a fertile but comparatively empty country, we are far from being yet strong enough to supply any large portion of the population of Britain with food, but she would have no objection to our doing this if we could, and our trade with her cannot be large until we can. This would first mean a very much increased population here. But we can go on meantime supplying timber and lumber, for instance, in enormous quantities. We sent Britain $12,000,000 worth last year. Our total output was $125,000,000, and our pay roll for wages was $30,000,000, an amount that could be easily doubled. Canada now has an opportunity to take a further important step in advancing herself in the great markets of the world and to establish thereby the greatest era of prosperity she has ever known."

# THE NEWS.

—Marshall Bros. have rebuilt their saw mill at Sprucedale, Ont.

—It is said that an axe factory will be started at Renfrew, Ont.

—Oliver Monger has purchased a saw mill at Mount Brydges, Ont.

—Gillies Bros. will rebuild the saw mill at Sand Point burned last month.

—J. P. O'Henley, of Berridale, Ont., has added a band saw to his mill equipment.

—Josiah Watson, of Brucefield, Ont., intends placing stave machinery in his mill.

—The late Hugh McLean, of Salmor River, N. B., left an estate valued at $48,000.

—The Hull Lumber Company have commenced to rebuild their saw mill at Hull, Que.

—A. McPherson & Co., of Longford Mills, Ont., now have their mill lighted by electricity.

—It is reported that Black & Perry, of Fergus, Ont., do not intend to rebuild their saw mill.

—Mr. Coleman has sold out his lumber business at Slocan City, B. C., to McCallum & Millspaugh.

—James Vance, late of Hepworth Station, Ont., has his new mill on Oastler's Lake almost completed.

—In Japanese saws the teeth point toward the handle, and both saws and planes cut toward the workman.

—Messrs. Newton & Sons, of Victoria Harbor, are getting their logs sawn at Chew Bros.' mill at Midland.

—R. Secord, of Huntsville, Ont., is erecting a saw mill on the site of Milne's mill, recently destroyed by fire.

—A syndicate owning a saw mill at Ashland, Maine, are said to be considering the erection of a large mill at Fredericton, N. B.

—Four saw mills have rec tly been established in the parish of Stoneham, Que., and another is being built near Lake Beauport.

—The Rat Portage Lumber Company has established a branch warehouse in Winnipeg, which is in charge of Mr. J. C. Graham.

—Albert Hayden, of Woodstock, N. B., has placed new and improved machinery in his saw mills, from the works of A. Dunbar & Sons.

—Mr. George J. Dewar, of the Export Lumber Company, Ottawa, donated a carload of lumber to the sufferers from fire in Russell county.

—David White, of Brantford, is building a saw mill at Bell City, near Rat Portage. It is his intention to build a planing mill in the spring.

—John Culligan is erecting a saw mill at Culligan's Siding, near Jacquet River, 100 x 30 ft. He will cut long lumber, laths and shingles.

—The Longford Lumber Company, of Longford Mills, Ont., are said to contemplate the erection of a new saw mill in the vicinity of Parry sound.

—We learn that Mr. W. W. Sloan, of Seaforth, Ont., purposes leaving for the Southern States, where he will engage in the manufacture of cypress lumber.

—W. H. Roberts, of Renfrew, is rebuilding his planing mill lately destroyed by fire. The new building is a substantial two story brick structure 100 x 50 feet.

—Mr. Shay has built an addition to his saw and shingle mill at Doe Lake, Ont. He is cutting birch lumber into chair bottoms for shipment to Great Britain.

—The shipments of lumber and shingles from Washington over the Canadian Pacific Railway to 1st October this year were 2,209 cars, against 1,515 cars in 1896.

—P. Payette & Co., of Penetanguishene, Ont., are busy on mill supplies. They are also making considerable machinery for the patent cloth board mill at Parry Sound.

—The Rathbun Company have started a portable saw mill at Ashburnham. About 20 men are employed, under the management of Mr. George Jackson, of Deseronto.

—Mr. Matheson, of Springhill, N. B., is looking for a site on which to erect a saw mill. It is said he will build at Eel River, about twenty-five miles north of Richibucto.

—The Weidmann Stave and Heading Mills Co. are moving their mills from Glen Rae to Southwold Station, owing to a scarcity of timber. There are 30 men employed by the company.

—Ritchie Bros., who purchased Cormier's saw mills at Aylmer, Que., are doing a successful business. They are now employing 90 hands, and propose adding to their timber limits in North Onslow.

—Mayor Wood, of Greenwood, and Hardy Bros., of Grand Forks, B. C., owners of a big timber limit at the upper end of Christina Lake, have let a contract for the cutting of 500,000 feet of cedar timber. In the spring a saw mill will be erected for sawing the logs for the local trade.

—The Commissioner of Crown Lands was recently asked to decide the true location of the boundary line between the timber limits owned by the Hawkesbury Lumber Company and the Klock Lumber Company. Each company had the line surveyed, but there was a difference in the location of it.

—A number of Manitoba lumber merchants held a meeting in Winnipeg last month to discuss trade matters. Among those present were: C. W. Plummer, Boissevain; T. A. Cuddy, Minnedosa; J. M. Neilson, Carberry; G. M. Miller, Virden; D. Stewart, Rosenfeld; J. B. Mathers, Glenboro.

—Michael Sheridan, contractor, of Montreal, is about to establish a saw and planing mill at Aylmer. The plant, which is to cost about $50,000, will be in operation by the first of May, 1898. Mr. Sheridan is now negotiating for the purchase of timber limits near Mattawa, from the government of Quebec.

—W. B. Crossman, late of Coverdale, N. B., but now of New Haven, Ct., has some fine specimens of handiwork. One of these is a workbox, made of ebony, white holly and other woods, into which he succeeded in working over 63,000 pieces. He also carries a cane made of 1,800 separate pieces of white holly and ebony.

—A. Tait, of Orillia, Ont., will probably erect a box factory in that town, and has applied for exemption from taxation. Mr. Tait states that he will build the factory only on condition that the G.T.R. will give him a reasonably fair freight rate on all lumber shipped in from other mills for the purpose of manufacturing into boxes.

—Hon. Justice Rose has given the final judgment in the case of Hurdman vs. Hull Lumber Company, and the result is a victory for the latter company on all important points. A part of the judgment in this case was given in our October issue. The contention of the plaintiff that the company had no right to certain interests, and to pay certain salaries, was decided in favor of the defendants. The judgement confirms the right of the Hull company to buy and own on behalf of the company any timber limits they may desire. The judge also decided that the Hurdman's brought the action to have their share declared too soon.

## CASUALTIES.

—By the falling of a tree on McLachlin Bros.' limits on the Bonnechere, above the Basin depot, Thomas McDonough lost his life.

—While working in Gilmour's mill at Canoe Lake, Ont., Edward Swenore was struck by a piece of wood and died in a short time.

—W. H. Sprentall was killed in Sprentall & Mickel's planing mill at Brighton, Ont. He was caught by a belt and hurled against the floor above.

## PERSONAL.

—Mr. E. F. Stephenson, Crown Timber Agent, Winnipeg, was recently in Ottawa on business with the Interior Department.

—We are pleased to learn that the Hon. E. H. Bronson, of Ottawa, is improving in health, and his early recovery is confidently expected.

—Mr. M. Carlin, for many years connected with the Golden Lumber Co., at Golden, B. C., has resigned his position as manager of that company, and has assumed the position of general manager for the Columbia River Lumber Co., with headquarters at Beaver.

—Mr. Tobias Gillmor died at St. George, N. B., last month. Deceased was a son of the late Daniel Gillmor, of St. George, and a younger brother of Hon. A. H. Gillmor, ex-M.P. He was in his 71st year, and as a member of the lumbering firm of A. H. Gillmor & Bros., was identified with the lumbering interests of New Brunswick for many years.

—Congratulations are now in order for Mr. A. F. Bury-Austin, the well-known lumber merchant of Montreal, he having taken unto himself a bride, in the person of Miss E. Mabel Foster, of Pembroke, Ont. The wedding took place on October 12th, and was attended only by the immediate friends and relatives of the contracting parties. The bridesmaid was Miss Louise Mitchell, while Mr. Gloucester Austin, brother of the groom, acted as best man. Mr. and Mrs. Austin left for a trip to New York and other American cities.

## THE TIMBER REGULATIONS.

The Premier of Ontario has decided that no action will be taken at the present time to compel the manufacture of timber within the province, but that the matter will be considered at the next session of parliament. His reply to Lieut-Col. Davidson, chairman of the meeting of lumbermen held on October 6th, is as follows:

"The Commissioner of Crown Lands has already acknowledged the receipt of the resolution passed at the meeting of lumbermen held in the rotunda of the Board of Trade building on October 6th, and which was forwarded to him by Mr. Wills, the secretary of the Board of Trade. The government have had under consideration for some time past the question to which the resolution relates, and in that connection the resolution of the earlier meeting, which was presented by Messrs. Waldie, Rathbun, Scott and Bertram. What I understand is, that the majority of both meetings desired that a new regulation be passed by order-in-council which will require all pine timber cut upon Crown lands to be manufactured into boards or other sawn lumber, or into square, waney or board timber, in Canada; and that this regulation shall apply to timber cut upon all limits, including those which were originally sold by the Crown without the imposition of that condition. The proposition is a very large one, and the suggested course is not free from legal complications. It is learned that the lumbermen of the western part of the province are almost unanimously in favor of the proposition, while some of the larger operators and some of those who do not operate so largely in the eastern part of the province are adverse to it.

"It has been urged upon the government in opposition to the resolutions that the adoption of such a regulation would affect very seriously large timber interests held by both Canadians and Americans, and that individual holders would suffer serious loss; and it is represented that the aggregate depreciation in value could only be approximately estimated.

"The question, therefore, as I have already intimated, assumed very large proportions, and is, the government cannot but feel, too weighty and momentous to be dealt with simply by order-in-council, without publicity and in the privacy of the council chamber, and the more so as the intent of the resolution is that the regulation shall apply to the timber on all limits without reference to the length of time that has elapsed since the latter were sold by the Crown, or to the prices at which they have since been purchased.

"After very full consideration we are of opinion that the question is one of such gravity and importance as regards both public and private rights, that instead of dealing with it by order-in-council, the Legislature at the approaching session should be asked by the government to enact such legislation as the public interests may require and the exigencies of the situation may appear to demand, in which case the whole question may be fully and openly discussed before definite action is reached.

"The Legislature will doubtless meet early enough to enable any necessary measure to be passed before the time arrives for the issue of the licenses for the next license year."

## UTILIZING PINE STUMPS.

An estimate of the possible profit to be realized in utilizing pine stumps and pitchy waste may be made by assuming that every cord of fat pine will yield forty bushels of the best quality metallic charcoal, twenty gallons of turpentine, forty gallons of tar, forty gallons of tar oil and sixty gallons of pyroligneous acid. By a process of redistillation this pyroligneous acid will yield one and one-half to two gallons of alcohol, with four to six gallons of acetic acid, besides a quantity of creosote. Calculating these first five named products at the lowest usual price, the returns from a cord will net $15. Young sap wood will yield more than one-half this quantity of products. A plant for this purpose can be built in the shape of retorts, each retort of sufficient size for one-half cord of wood, at an outside expense of say $300. The time required for each charge of one-half cord of wood is eight hours, each retort thus handling one and one-half cords of wood in twenty-four hours, resulting, therefore, in some $20 profit per day from a retort costing not more than a coke oven.

The East Kootenay Miner of September 23rd says: Last week another saw mill left Golden for Moyle City, Moyle Lake. The mill belongs to Messrs. Park & Leitch. The distance the mill requires to be hauled from Golden to its destination is nearly 200 miles. Twelve teams, under the direction of Mr. J. A. Munson, Fort Steele, are freighting it. It will be close upon three weeks before the mill reaches its destination and is set up. The mill is supplied by the Waterous Company, of Brantford, Ont.

# WOOD PULP DEPARTMENT

## SCANDINAVIAN VS. CANADIAN PULP.

THE Paper Trade Review, of London, Eng., contains the following with regard to wood pulp:

The Scandinavians are showing a lively interest in the efforts being made to develop the Canadian wood pulp trade. At the present time considerable energy is being displayed, and European capital is likely to be enlisted in extensive undertakings which are being projected. The manufacturing conditions are very favorable for the economical production of chemical wood pulp, and although mechanical has been shipped to Europe, it is evident that success in this direction depends on the prices fixed by Scandinavian manufacturers. During the last few months several heavy cargoes of Canadian pulp have been received, and people interested in the industry are very sanguine of an extensive business being built up with Europe in the course of a year or two. Freightage on moist mechanical has been an impeding element, and consequently Canadian ground wood pulp mills have, in some instances, decided to go into papermaking. This step will make it imperative for other paper mills to put down the latest appliances, and consequently there will later on be a very large output of paper, for which an export market must be found—and no doubt the chief dumping ground will be Great Britain. There are no statistics available to show the imports of trans-Atlantic wood pulp during the present year, but in 1896 the British demand included only 2,714 tons, of the value of £9,370, from Canada, and 847 tons, of the value of £7,266, from the United States.

The Scandinavians, it must be admitted, monopolise the British market, the value of their supplies during 1896 amounting to £1,485,761, or 88 per cent. of the total value of wood pulp (of all kinds) received. The following are the five years' figures relating to British imports of wood pulp:—

FROM NORWAY.

| | | | |
|---|---|---|---|
| 1896 | 205,677 | tons | £894,264 |
| 1895 | 173,898 | " | 803,731 |
| 1894 | 162,346 | " | 694,919 |
| 1893 | 125,889 | " | 538,260 |
| 1892 | 122,215 | " | 488,156 |

FROM SWEDEN.

| | | | |
|---|---|---|---|
| 1896 | 94,917 | tons | £591,497 |
| 1895 | 83,704 | " | 528,952 |
| 1894 | 51,998 | " | 344,021 |
| 1893 | 48,049 | " | 329,190 |
| 1892 | 46,328 | " | 274,508 |

Other countries exporting wood pulp to Great Britain last year were Russia, Denmark, Germany, Holland, Belgium, Portugal, Italy, and the Austrian Territories. Their participation, however (including Canada and the United States), was under 12 per cent. of the total value (£1,684,647).

A later issue of the same journal says: There are several Canadian schemes being projected with British capital, and, if such a step was advisable, British papermakers would be prepared to form themselves into a combination and erect extensive chemical and mechanical pulp works, in Canada or elsewhere, from whence to draw their supplies. British papermakers and financiers are following the example set by American manufacturers in acquiring timber lands in Canada. The negotiations now pending include the purchase of an estate about 54 square miles, with 6 miles frontage to the Gulf of St. Lawrence, and according to the report of an expert, "the greater part of the seigniory is in its virgin state, and is covered with a heavy growth of valuable commercial timber, pine, spruce, birch, etc." American manufacturers admit that they get more pulp per cord from Canadian wood than from the wood of any other country.

Mr. Joseph Leme, manager of the Acadia Pulp Co., Acadia, N.S., was killed in the mills by being caught in the belting.

## PULP AND PAPER MAKING IN BRITISH COLUMBIA.

THERE is in British Columbia an abundance of material for pulp and paper making, which, when exploited, should give excellent results. A company has recently been registered in England under the name of the British Columbia Wood Pulp and Paper Co., Limited, with a nominal capital of £65,000, divided into 35,000 7 per cent. preference shares of £1 each, and 30,000 ordinary shares of £1 each. This company proposes to acquire the works of a small paper mill established some years ago at Alberni, on the Sumas River, in the Pacific province. The mill was erected to convert rags into paper, and as material was scarce and expensive, the venture was not overly profitable. That the new company intends to supply the local market with paper is not the most interesting feature of its plans. An expert who has been looking over the ground points out that "there exists in China and Japan a good demand for wood pulp, which, owing to the absence of suitable wood, these countries are unable to manufacture. British Columbia could supply the markets of these countries with pulp and paper as profitably as any country in the world." It is his opinion that the British Columbian mechanical wood pulp can be produced at 22s per ton, or that British Columbian sulphite will cost only £4 per ton. If this estimate be correct, paper making in British Columbia should be a profitable industry.

Mr. L. F. Burroughs, advocate, of Quebec, on behalf of Messrs. P. Garneau Fils & Cie, has been granted a winding-up order against the Cascapedia Pulp and Lumber Co. The latter admit the facts contained in the petition, and Messrs. Paradis and Jobin have been appointed provisional guardians.

It is stated that the Sault Ste. Marie Pulp & Paper Company are making radical changes in their wood pulp mill to fit it for making dry pulp to be sent to foreign markets. All the wet machines in the mill are being fitted with drying cylinders, one 6-foot cylinder to each machine, and dry pulp will be produced to be exported. The mill has been making very little pulp of late on account of these changes.

MANUFACTURERS

**Of Pulp Machinery** should place their announcements on this page. The pulp industry is a growing one, and a number of new mills are likely to be erected in the near future. Write for card of advertising rates.

## PULP NOTES.

Darblay, Pere & Fils, of Paris and Rouen, one of the largest pulp and paper-making firms in France, have had agents in New Brunswick recently making arrangements for a supply of spruce for pulp-making.

The following figures show the quantity of pulp exported from Montreal to Great Britain in the past five months: May, 6,528 rolls; June, 15,731 rolls; July, 16,593 rolls; August, 30,553 rolls; September, 8,422 rolls.

An Australian correspondent writes to an exchange as follows: Orders have gone forward from here for pulp for paper mills in this country, and correspondence is in process respecting paper. The paper will follow in the wake of the pulp. A proprietor of a leading newspaper said the other day, "When a representative of a Canadian paper mill comes here I want to see him."

A party of Montrealers, including Messrs. Herbert S. Holt, president of the Montreal Gas Company, Lieut.-Col. Whitehead, George F. Hartt, R. D. McGibbon, Q.C., Edgar MacDougall, William F. Robinson and Mr. J. W. Houston, of New York, counsel for the Westinghouse Electric Company, recently inspected the pulp mill and new works of the Laurentide Pulp Company at Grand Mere, Que.

A plan is mooted which shall consolidate the big paper and pulp mills of the United States. The mills interested in the consolidation are the Glen's Falls Paper Mills, the Otis Falls Pulp, the Fall Mountain Paper, the Niagara Falls Paper, the Ticonderogo Pulp and Paper, the Hudson River Pulp and Paper, the Montague Paper, the Turner's Falls Paper, the Olcott Falls, the Winnipegosis, the Glen, the Berlin Mills, and the Falmouth and Rumford Mills Companies. The total capital will be about $22,000,000.

WHY BAND SAWS BREAK

SIXTEEN REASONS,

AND HOW TO AVOID THEM

Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, ONE DOLLAR.

*Over 50 Years of Uninterrupted Advance.*

Fifty years ago we supplied the pioneer upright sawmills to the Canadian lumbermen. These were quickly supplanted by the speedy but wasteful circular saw, these by the faster gang, with its disregard of qualities, and now the economical band sawmill, combining speed and economy, has full sway. We are always to be found in the advance guard in the march of improvements.

Now is the time to consider the important change from a Circular or Gang to the

## ALLIS BAND MILL

Recently a customer, who had steadily refused to abandon the wasteful circular, ordered an "ALLIS" BAND MILL. On enquiring the cause of his sudden change he replied, "I never believed in a band mill till this fall. I had a stock of a million feet cut at a neighbor's mill with one of your Allis Band Mills, and was simply astounded at the quantity of lumber I received, and its handsome appearance."

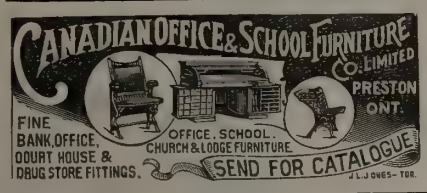
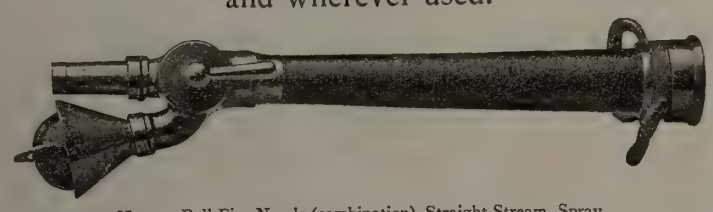
We shall be pleased to send you a copy on receipt of four 3 cent Canadian postage stamps

THE CANADA LUMBERMAN,
*Toronto, Canada*



THE BALL NOZZLE

Highly endorsed by the Underwriters and Fire Departments throughout Great Britain and the United States, and wherever used.



No. 1. Ball Fire Nozzle (combination), Straight Stream, Spray and Shut-off, with or without Play Pipe.

BALL NOZZLES For Fire Hose, Lawn Sprinklers, Fountains, Air Distributors, Tree and Land Irrigation

THE Ball Nozzle Company, of Toronto LIMITED

Offices: Room 1, Confederation Life Building, TORONTO

The A. R. Williams Machinery Co., Limited

Front Street West - TORONTO

WITH BRANCHES AT

345 St. James St., MONTREAL; 193 Colborne St., BRANTFORD, and the London Machine Tool Co., LONDON

Beg to call attention to their new descriptive stock taking list, just issued, which they will be pleased to send on application.

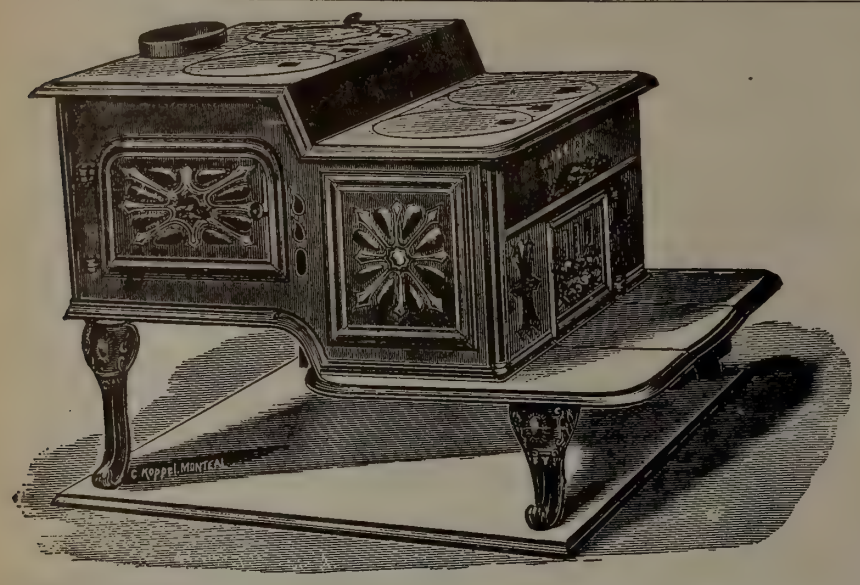
We have **Several Valuable Mill Sites** in good localities for sale on reasonable terms, consisting of a Planing Mill in a northern town, with large new building and full equipment of modern machinery, used only a few months from new;

**One Saw and Shingle Mill Outfit**—good order as last used;

**One Saw and Stave Mill,** having one 5 block Waterous iron frame Saw Mill, Engine, Boilers, and full complement of Heading and Stave Machinery, now cutting out this season's stock;

We are the Sole Canadian Agents of the celebrated **Sturtevant Improved System of Dry Kiln and Heating Apparatus,** and have on hand now for prompt delivery, one of their 120" Fans with engine attached, end 6,140' cap. Heater. This rig cost when new $2,000.00, has only been run a short time, and will be sold at a bargain.

THE A. R. WILLIAMS MACHINERY CO., LIMITED, TORONTO.



# Lumberman's STOVE

Made SPECIALLY STRONG for rough usage, and in every respect adapted for lumberman's use.

**Size of Fire Box, 12 x 13 x 27 Inches. Size of Oven, 8½ x 14 x 27 Inches.**

Fire Box can be made smaller by a moveable grate. Has large Pot Holes. A special air chamber between Fire Box and Oven improves its baking qualities. This stove is the favorite with Lumbermen in Provinces of Quebec, New Brunswick and Nova Scotia.

**Write Us At Once.** **Prompt Shipment.**

## MR. W. MALCOLM MACKAY.

IN the commercial history of Canada there are few persons who have taken a more prominent part than the subject of this sketch, Mr. W. Malcolm Mackay, of St. John, N. B., of whom we take pleasure in presenting a portrait taken a short time ago, and which is, we believe, the first ever given to the public. Though one of the foremost of our continental shippers, handling as he has done, with ever-increasing success, a business which has been running into the millions, so conservative and unpresuming are his proceedings, although far-reaching in their power, that the journalistic world usually hears but little of the extensive trade which he carries on.

Mr. Mackay but personates the unpretentious enterprise of the nation he represents, having been born in Lancashire, England, on October 27th, 1851. He is a son of the late Hugh Mackay, who did business before him of a like natute in Quebec and the Maritime provinces, and who at one time lived in St. John, having a house on Dorchester street. Hugh Mackay was born in 1800 in Pictou, N. S. His father, Colin Mackay, was one of the pioneer settlers of that section, having emigrated from Stirlingshire, Scotland, in 1783, and settled on East River, Pictou, N.S. He was married to a lady of English descent, a Miss Mary Davis, one of an old and representative family. He died in 1863, leaving several sons and daughters.

Malcolm Mackay, the subject of our sketch, was sent to Liverpool College, where he studied for six years, at the time when the Rev. Geo. Butler, M. A., was in authority there. His course being completed in 1868, he entered the offices of his uncles, A. F. & D. Mackay, in Liverpool, who have stood among the most prominent of lumber importers. Having served with them for five years, he came out to Bangor, Maine, as their representative.

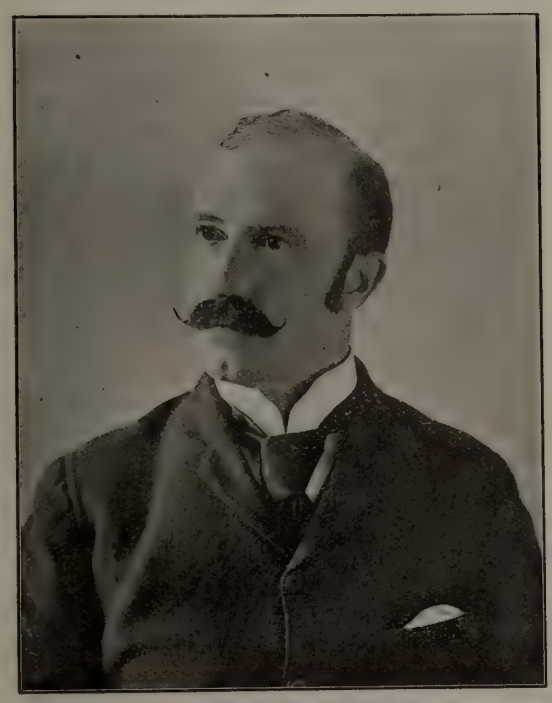
In the year 1875 he removed to St. John, N.B., and entered into business with his brother, Jas. Mackay, and shortly afterwards launched out on his own account. His policy was to ship for the lumber operators, having their stock as security in his operations, and the absence of speculation accounts in a great measure for the firm and steady increase of his business. He is now represented in England by his brother, Campbell Mackay.

Mr. Mackay's offices are in the Reed building, where they have been located for twenty-two years, and from the windows one looks directly over the harbor where lie the many vessels which he charters, to the number of two hundred in a season.

In 1886 Mr. Mackay was married to Miss Susan McMillan, the eldest daughter of Mr. John McMillan, a prominent publisher of St. John. They have now a family of five sons, and live in one of the handsomest residences in the city, situated on Orange street. They have also a beautiful summer home in Rothsay, just outside the city. The family are numbered in the congregation of the "Stone" Church of England.

No matter how business varies, Mr. Mackay has ever been known to be of a calm and even temperament. Recognizing the advantages of giving satisfaction to his customers, he has experienced little difficulty in holding his trade.

Of his lumber operations, it may be said that for years Mr. Mackay has been one of the most extensive shippers of lumber in Canada, handling



MR. W. MALCOLM MACKAY.

nearly one-third of the export from the provinces of New Brunswick and Nova Scotia. By his achievements this year, however, he becomes the largest lumber shipper in the world, having handled over three hundred million feet. His shipments are confined largely to the British markets, the stock being distributed through his Liverpool agents, Messrs. A. F. & D. Mackay.

## BELT DRESSINGS.

THE saving of power, belt leather, etc., that follows the use of a good belt dressing on drive or race belts of spinning mules and other machinery, is of considerable consequence to any manufacturer. In order to detect a good from a poor belt dressing, so far as frictional properties are concerned, an apparatus can be used with benefit. It consists of the upright stand, in which a pulley is arranged to turn in a bearing.

A piece of two or three-inch belting should be secured to the floor and the other end to lever. One end of the lever is studded and the other end held down by a bolt. The pulley may be turned from the main shaft of the mill by putting another pulley on the shaft with the second pulley, and belting the former to a pulley on the mill shaft. The dressing compound to be tested can be applied between the pulley and the belting, and the affair started running. The proportion of increased friction obtained by using the belt dressing may be figured out according to the tables in any engineer's hand-book, using as a basis the proportion of additional friction which has been brought to bear upon the belt as a result of drawing down the lever by means of the bolt. —Boston Commercial Bulletin.

## NEW BRUNSWICK TIMBER RESOURCES.

HON. Mr. Tweedie, provincial secretary for New Brunswick, is authority for the statement that, owing to the drop in the spruce market and lack of ships to carry the products of the forest out of the country, there will be held over in that province this winter 100,000,000 feet of lumber. Mr. Tweedie was at one time surveyor-general, and is, in consequence, perfectly familiar with everything connected with the lumber industry. He declares that the province has 7,000,000 acres of timber land, and although lumbering is most extensively carried on, there are yet no less than 2,000,000 acres which are not under lease. This land can be cut over every seven years, and it would therefore seem that fire is the only thing that can ever bring New Brunswick's wonderful timber supply to an end. Consequently it is only natural to suppose that the Government of the province will take every possible means to protect and husband this great source of wealth and general prosperity.

The provincial secretary states that in 1893 the New Brunswick government could have sold the entire timber limits of the province for a sum ranging from $10,000,000 to $15,000,000, and thus wiped out the provincial debt and provided a comfortable revenue for all time to come. However, the executive decided that the wholesale disposal of such a magnificent asset as the forests of New Brunswick would be an unwise policy and detrimental to the best interests of the province. He explains that had such a policy been carried out, the timber would have fallen into the hands of monopolists, who, only cutting to suit their own purposes, would have, no doubt, lessened the output and deprived thousands of people from earning a livelihood. As it is at present, under the twenty-five years' lease system, the lessee is obliged to cut so much every year, and thus the benefit which thousands enjoy is steady and continuous.

The Robertson Raft Company has been organized in San Francisco with the following as officers: J. F. Kennedy, president; J. A. Hooper, vice-president; J. W. Stewart, secretary, with Messrs. Jackson, Robertson & Holmes as the board of directors. After years of trial the plan of coast rafting as perfected by Mr. Robertson has gained a permanent footing, and the above company has been organized to carry on the work.

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## CANADIAN WEST INDIA TRADE.

To the Editor of the CANADA LUMBERMAN.

SIR,—I have not as yet had the pleasure of reading the pamphlet referred to in the November issue of your valued journal, as compiled by Mr. J. A. Chipman, of Halifax, Nova Scotia, entitled "Canadian West India Trade," but from your comments thereon I am pleased to observe that a resident of one of the Maritime provinces has the courage to direct the attention of our people in Ontario to the fact that our province, contributing the largest proportion of the subsidy to the miserable, inadequate, irregular steamship service, operating as between Canada and the West Indies, derives little or no benefit from such connection.

The annual subsidy of $95,000 was obtained with the distinct understanding that Canada was to be furnished with a first-class fortnightly service from St. John and Halifax to Demerara and Jamaica, touching at intermediate ports; this was some ten years ago.

Instead of this frequent and regular service, so stipulated and promised, the company have employed occasional tramp steamers, such as the "Portia," or whatever others might be available when a sufficient cargo had been secured, and Western Canada, notwithstanding the prominent position we rightly occupy in the Confederation, and paying the large proportion of the subsidy, derives little or no benefit from it.

The lumber interest is but a fair indication of the foregoing, as, for instance, in 1896 Nova Scotia alone exported forest products to the value of $86,053, whereas the figures for Ontario are given as $204—and with British Guiana, the Danish, French and Dutch West Indies, St. Domingo and Honduras, it is equally unsatisfactory.

Apparently the service is maintained and subsidized in the direct interest of the Maritime provinces, and Ontario is called upon to provide for their assistance in this as in other terminal facilities, and at the same time, to secure an efficient and regular mail service, contribute to the steamship service via New York.

As Mr. Chipman points out, in the manufactures of wood alone, of which the West Indies purchase annually one and a quarter million dollars' worth, the United States furnish $700,000 or $800,000 worth, and Nova Scotia and New Brunswick the balance.

The fact that the Americans furnish this large proportion of forest products, the bulk of which doubtless originally comes from Canada, is attributable without a doubt to their efficient and regular service. Many instances are recorded where shipments have been made from Canada to the West Indies via St. John and Halifax, the drafts against same mailed via New York, with the result that the drafts arrived at their destination before the goods were forwarded from the Maritime provinces, such goods being detained awaiting the sailing of our irregular steamers, with the consequence that drafts arrived at the West Indies long before the goods, and were held for a time and then returned unaccepted. Our Ontario people became disgusted with the facilities via our subsidized Maritime steamship line, and refused to execute further orders unless they received instructions to ship via New York—consequently Ontario has been contributing three-fifths of this subsidy for years without deriving any benefit therefrom.

Is it any wonder that the United States are importing from Canada and supplying $700,000 or $800,000 worth of this million and a quarter in forest products, notwithstanding the professions of the present Federal government in regard to Dominion trade extension?

In every instance Ontario seems to be handicapped as against our outlying provinces, owing to the experiences and resulting apathy of our people, the exorbitant rates of our railways for transporting to such terminal points, and the irregularity of the steamship facilities in the Maritime provinces. If they do ship at all they are compelled to give preference to the shorter rail haul to New York and the frequent regular service, and operate this and other trade in the other British colonies through commercial houses in the United States, and thereby develop a trade for the Americans by swelling their shipments, and assist them in obtaining a more favorable interchange in the products peculiar to such British colonies.

Mr. Chipman suggests a through line from Montreal in summer, with most favorable and decided possibilities to Quebec and Ontario. It is commendable, and worthy of note, that the C.P.R. are now awakened and are quoting the same export rates to St. John as are current from the same shipping points in Ontario, &c., to New York, and have sent an agent to the West Indies, who has, I understand, already visited Bermuda, St. Thomas, St. Croix, St. Kitts, Antigua, Dominica, St. Lucia, Barbadoes, Trinidad and Demerara, and we may hope for satisfactory results; but is a railway representative competent to decide and further commercial necessities?

If the favorable disposition of the British West Indies to interchange with Canada has not been entirely absorbed in their unsatisfactory experience with the Pickford & Black steamship lines, there may still be a reasonable possibility of securing at least a portion of this trade, but a reference to the volume of forest products shipped by the United States to the West Indies, of from $700,000 to $800,000, should afford food for thought for Ontario people.

Let it be understood and borne in mind that Ontario furnishes three-fifths of the revenue of the Dominion, and that whatever subsidies are supplied Ontario provides an equal proportion of such expenditure, therefore she is entitled to a corresponding benefit in whatever trade interchange may result.

Geographically, Ontario is seriously at the mercy of our railways in the matter of satisfactory rates on shipments to the West Indies and South America, in consequence of the long rail haul to St. John or Halifax. This, as well as the fact that we are committed federally to three-fifths of whatever subsidy is granted by the Dominion government, should be kept prominently before our government.

St. John and Halifax are continually at sword's point when any assistance or recognition is afforded by the government to either New Brunswick or Nova Scotia, in which they do not equally participate. To wit: I observe to-day in the telegraphic despatches that "the people of St. John, N.B., are up in arms over the terms of the new arrangement made between the Federal goverment and the Beaver steamship line, whereby Halifax is to be made a port of call during the winter service," &c.

It is also to be observed that the deputation from St. John, on their way to Ottawa, called upon Mr. Shaughnessy, Vice-President of the C.P.R., in Montreal, with an endeavor to have St. John's interests more carefully considered. This rivalry and continuous struggle for supremacy, as between the Maritime provinces, would to a very material extent be obviated by the adoption of the valuable suggestions of Mr. Chipman, of Halifax, for a fortnightly service from Montreal and Quebec, with the very valuable intermediate service in the route, from which such steamers would unquestionably profit. By this means only can Ontario ever hope to profitably participate in this West India trade; otherwise New York, with the comparatively short rail haul, is our only hope.

Nova Scotia alone exported to the British West Indies, including British Guiana, about two million dollars worth of goods in 1895, and to all the West Indies $3,449,585; consequently their efforts and anxiety.

We have Boards of Trade (so-called) continually languishing, at banquets and other similar occasions, for opportunities for trade extension, and there is an intense rivalry manifested by certain of our business men in calling forth what might or should be done if such and such were only at their command. As far as Ontario is concerned it ends in such wind explosions, and we are left, Micawber-like, waiting for another occasion to turn up for windy efforts, and in the interim whine at the inactivity of the government, the irrregular service, etc., etc., without exercising effort or influence to remedy the condition.

What we require is that our business men in Ontario, as representing three-fifths of the subsidal assistance, get right down to a practical realization of this matter, and devise some practical, intelligent basis upon which to secure proper consideration, and demand facilities and rates in the interest of Ontario that will admit of some return for the large subsidy which we have had to contribute for years in the direct and only interest of the Maritime provinces.

The proportion of $204 in Ontario against $86,053 to Nova Scotia in lumber interests, is significant of the proportion Ontario derives in the total of the Canadian trade to all of the West Indies.

Deputations from Nova Scotia and New Brunswick have been chasing one another to Ottawa in this matter long enough. Now, let Ontario and Quebec look to it that during this opportune season opportunity is given them to share in this trade proportional to the subsidy paid by each province, or else favorably consider facilities elsewhere.

Mr. Chipman's effort should commend itself to every thinking Canadian engaged in manufacture and export in Ontario. If Ontario had but a percentage of the indomitable and irrepressible spirit which the Maritime provinces possess for asserting their position and value to the Dominion, and their rights, she would be differently treated and more equitably regarded than at present. The efforts and co-operation of our lumbermen are essentially necessary for this purpose. Let unanimity and combined purpose characterize every effort put forth, and Ontario, for her three-fifths subsidy, will obtain her proper share of this trade.

Insist upon a first-class line of steamships; it is not merely a Nova Scotia or New Brunswick venture, but a Dominion interest, and Ontario wants her proper share and must have it.

"PROGRESS."

## CANADA FOR THE CANADIANS.

To the Editor of the CANADA LUMBERMAN:

SIR,—What are our governments and people about, to allow Scandinavia and other foreign countries to monopolize the British market in their demand for wood pulp without putting forth some practical, intelligent effort to secure at least a reasonable portion of this trade to our resourceful Dominion? I observe in the November issue of your valuable journal, THE CANADA LUMBERMAN, that Norway and Sweden furnished Great Britain with 300,594 tons of pulp wood in 1896, valued at £1,485,761, or seven million four hundred thousand dollars' worth in round figures, or 88 per cent. of the total value imported by the mother country, viz., £1,684,647, and that the balance of 12 per cent. of Great Britain's requirements was made up of imports from Russia, Denmark, Germany, Holland, Belgium, Portugal, Italy, Austria, the United States and Canada—our Canadian portion being but 2,714 tons, and the value being £9,370.

Can the lumbermen of Canada explain why this is? Is it through want of intelligent effort, or is it that the pulp wood of Norway and Sweden is considered in Great Britain as superior to that of our country?

American manufacturers, as you state, admit that they get more pulp per cord from Canadian wood than from the wood of any other country. If our wood pulp is so superior in quality as recognized, and more profitable in results than any other, why this 88 per cent. from Scandinavia to Great Britain? Is it that our freight rates are against us? If so, with such preferable material as we are acknowledged to have, and with the possibility of capturing such a volume of trade in this particular interest, with practical Imperial federation and trade within the British Empire as the popular commercial theme of this jubilee year, surely it is worthy of the closest and most practical consideration on the part of our railway and steamship companies.

Australia, I also observe, has sent forward orders for pulp for their paper mills, and anxiety is announced by a prominent newspaper firm to meet a Canadian representative of one of our paper mills. Is it not in order to inquire what is Commissioner Larke doing that this decided opportunity is not looked after?

The federation of the British Empire and the proposal to trade within the Empire should materially assist our Dominion in the development of this department—that is, if Imperial federation means anything but lip loyalty. But it occurs to me that the overtures and efforts to effect such a federation and trade interchange as between the colonies and the mother country, has only so far served to awaken our American neighbors to a practical realization of the possible commercial results of such federation, as in this particular interest, note the proposed amalgamation of the big paper and pulp mills of the United States, with a combined capital of some twenty-two million dollars, so as to protect and strengthen their endeavors for the world's trade. Canadians have, or should have, with the subsidal assistance provided by our governments, the very best steamship and other facilities, and the most favorable rates for conveniencing trade with the mother country,

the sister colonies, Japan, China, West Indies and other sections. Our banking facilities are, with the keen competition and the desire for business, available and applicable for all essential purposes. The question, therefore, is: Are our people lacking in the necessary enterprise, or are our rail and steamship rates prohibitory?

I have very carefully read the report of the meeting of Ontario lumbermen, and I am astonished at the want of unanimity characterizing the same, when matters of such vital importance to their interests are now so prominently engaging the attention of our people. Our American neighbors set forth an exemplary and striking example, inasmuch that when any question arises in their country indicating a necessity for general action in the protection of American interests in any department, they are at once unanimous; whereas in Canada, if momentous questions arise involving general interest, it is as a house divided against itself, section against section, province against province, and while we are wrangling, our astute neighbors slip in, and either legislate or combine for protection and American aggrandizement to our detriment.

Again, we have this export log duty, a very sery serious feature, before us to-day. Does it not occur to those who are in authority, and to all directly or indirectly interested, that while we are wrangling and differing, where active effort and unanimity are essentially necessary, that our American neighbors are actively securing the most valuable concessions and privileges from our governments, sending in their own labor to cut, and actually supplying such alien labor with their necessities from the States, and enacting alien labor laws to the exclusion of Canadians from their conntry, and also shipping our logs to their own mills in the States, and manufacturing from our Canadian raw material to supply the very markets which Canada should, and could, practically control, or at least largely supply. The government may be very carefully considering, as the Hon. J. M. Gibson puts it, but at the same time note the significance of the fact that special notice is taken of the deputation of American owners of limits pressing their views upon our own Ontario government. We may well ask for an explanation from this same Ontario government. Reverse the position and imagine, if possible, such a Canadian overture to the United States.

It appears from Mr. Bertram's resolution and remarks supporting the same that it was considered necessary to restrict the exportation of saw logs, and the Ontario government was requested to so amend the pine timber regulations that all pine timber cut under license in the province of Ontario SHALL BE MANUFACTURED IN CANADA. The government, I observe, informed the deputation that the government entertained the opinion "that during the currency of the existing licenses such action as was proposed by the resolution of the meeting of Aug. 19th could not well be taken," and also "that the government was very carefully considering what policy should be adopted with reference to the logs cut after the expiration of the existing licenses, and it was hoped that in a short time the public would be made aware of the course which may be determined upon." It seems from what Mr. Bertram says, that six days after the Michigan gentlemen and Mr. Charlton were here (Sept. 7th), that the Americans and their appliances were into the bush, so that they (the Americans) seem to have received from our Ontario government that which is almost invariably denied to Ontario people, viz., a prompt, intelligent, definite answer. Mr. Bertram in a very marked and practical manner recognized what is due to the Americans who had invested in Canadian limits, but very properly directs attention at the same time to the duty owing to Canadians interested and to the Dominion at large.

The crisis is, indeed, a grave one, and the results of to-day, necessitating Canadian protection, are but the outcome of the conditions created by the Americans themselves, and an appeal was made to the Ottawa district and other sections for joint action in the interest of the Georgian Bay district and Western Ontario; so that the sawing of our lumber should not be taken from Ontario and carried on in Michigan, and be the means in the near future of enforcing upon those who succeed the present employers to go to Michigan for employment and business.

Allow no logs to be exported from Canada at all, and have inserted in all licenses granted hereafter, in the general interest of our country, that all timber on the crown lands of Ontario shall be sawn, made into square timber, or otherwise manufactured, by Canadian labor in Canada. If the government, as Mr. Beck stated, has the power to raise the dues on all pine timber on crown lands without giving notice, they have assuredly the power to enact the foregoing, and thereby, at least, put us on equal footing with the Michigan lumbermen.

The present season, with the elections at hand, affords a most favorable—in fact, a signal—opportunity for pressing for this important condition, and to have the Dominion government amend the Act so that the export duty on our logs going to the United States would be equivalent to the duty charged on our lumber. They (the Americans) want our lumber and must have it; therefore, take advantage of the opportunity and protect our Canadian interests. It may disturb to an extent our relations with the Americans for a time, but with opportunities such as we now have for developing new industries in pulp manufacture, it will afford an impetus to the disposition of English capitalists to invest their surplus capital in Canada.

The Paper Trade Review, of London, England, says: "There are at present several Canadian schemes being projected with British capital, and if such a step was advisable, British papermakers would be prepared to form themselves into a combination and erect extensive chemical and mechanical pulp works in Canada or elsewhere from whence to draw their supplies. British papermakers and financiers are following the example set by American manufacturers in acquiring timber lands in Canada." This should be practical evidence that we are not entirely dependent on our American neighbors, but, to the contrary, that a plethora of capital can be obtained to develop such new industries in Canada and provide employment for thousands of our men and boys.

Mr. Hammond, of Algoma, informs us that "thirteen million five hundred thousand dollars' worth of logs and timber were exported last year from Canada to the United States, and a very large proportion of this was logs, which were towed to the United States mills, and an enormons business done on that side in slabs from tree tops never scaled and sold as fuel. Much of the product manufactured there was sent back here free, and our mills had, of course, to compete. This is manifestly unfair to our farmers, laborers, millmen, traders, manufacturers, and every industry in this country, BUT IT IS A SOFT SNAP FOR THE CITIZENS OF THE UNITED STATES. By compelling and encouraging home manufacture an impetus would be given to our farmers, settlement would be promoted, the manufacturers would profit, and trade generally would be improved." Surely this should be suggestive.

With the improved condition of affairs in Manitoba and the Northwest, and the abundant crops of last year, and good prices, there is such a demand for lumber that the mills are taxed to their utmost capacity. Farmers are prosperous, and it means an active demand and decided opportunities to the lumber manufacturers of north-western Ontario. Georgian Bay and Algoma should be able to satisfactorily compete for this trade as against Duluth. Here again is the opportunity for the C. P. R. to assert itself, in favorable rates, as against the 500 miles of transportation from Duluth; let them reduce their 18 cents or 20 cents' rate from Port Arthur to a rate similar to a same distance rate in eastern Ontario, and this immense trade is at the command of Ontario, as manufacturers and shippers in Midland, Parry Sound, Penetang, Byng Inlet, Spanish River, French River, Thessalon, and all other millers in the district would capture this trade from Minnesota. It rests with the C. P. R.

Mr. Waldie, in stating that if the Ontario government took no action a very great injustice would be perpetrated on the lumber interests of the Georgian Bay, is eminently clear upon the point, particularly when he set forth the almost startling fact that they have facilities in the Georgian Bay district for taking out 400,000,000 feet of logs, but that out of that 400,000,000 feet, under existing circumstances, not 100,000,000 feet will be manufactured in Canada, and half the mills on the Georgian Bay will be standing idle, and that the wealthy and old established firm of Cook Bros., with their wealth, extensive limits, ample means and mills, have closed their mills and sold their logs to Michigan. His statement that he did not want to see the sons of our prominent lumbermen compelled to follow the logs to Michigan and become residents there was timely. This is, and will be, the result if our governments do not awaken to the serious consequences that their inactivity and want of comprehensive action will undoubtedly lead up to.

Lumbermen never had a more desirable opportunity for presenting their grievances to the governments, both federal and provincial, than they have at present, the elections being so close at hand and a marked desire asserting itself for a change of policy in the general interest of the province and Dominion. With the wealth and influence of the lumber interests in Canada, and the co-operation of manufacturers, storekeepers, farmers and our financial institutions, coupled with our railways and steamships, and the many other interests in different districts almost dependent on the lumber trade of Canada, there should be a collective force with sufficient weight to compel an earnest, complete, and intelligent consideration and necessary protective action. Let those interested have but the courage of their convictions and make public their desires, and the voting element of the Dominion will undoubtedly endorse and assist them, and I feel we can rely on the valued columns of the CANADA LUMBERMAN to assist us also.

"CANADA FIRST."

## THE LOG SCALING QUESTION.

To the Editor of the CANADA LUMBERMAN:

SIR,—My attention having been recently called to a letter in your issue of April, 1897, entitled "Different Results in Scaling Logs," and signed "Lumberman," I ask permission to reply thereto, although I am somewhat reluctant in going into the public press in connection with my duties, and would not have troubled you on this occasion if "Lumberman" had stated all the facts in connection with this important matter. But such is not the case, as he seeks to leave the impression that he has been harshly dealt with by the officers of the Crown Lands Department, "who either do not understand their business or wilfully overmeasured the logs in question, in order to build up a reputation for themselves at his expense." Consequently, I am compelled, in justice to the Crown Lands Department, scalers, general public, myself and fellow ranger, to request the publication of this letter.

"Lumberman" states that he purchased 18,878 pieces saw logs from another firm, but he omits to state that he purchased these logs upon a contract, at a high price, which called for a choice and superior quality of logs, to be scaled by "Lumberman's" scalers; and when the time arrived to inspect the logs on the skids, it was then ascertained that the logs were not equal to what the contract called for. These are the facts as stated by "Lumberman" to the writer. What was the duty of "Lumberman" under these circumstances? Was it not their duty to reject all logs which were not equal to the quality called for by the contract, give an accurate measurement for the logs so accepted, and separate scale of the rejected logs, in order to return the same to the Crown Lands Department for the purpose of paying the Crown dues thereon? But for some reason, unknown to the writer, "Lumberman" and his scalers did not pursue this course, but decided to reject nothing but what they considered worthless logs, and measure the balance in such a manner as would produce results equal to the logs called for by the contract. Having conducted the scaling in this manner, I could not accept a scale on behalf of the Crown Lands Department which scaled out all the coarse lumber.

You will observe, Mr. Editor, when it was proposed to make the returns and pay the Crown dues upon that scale, it was my duty as an officer of the Department to object to the measurement made and insist that the logs be properly measured, in order that a proper and honest return might be made to pay the Crown dues upon. In fact, at the time the re-measurement was being proceeded with, "Lumberman" admitted to the writer that I was justified in recommending a re-measurement of the logs in question, as his scalers had scaled the logs in such a manner as to make them equal to the logs called for by the contract, which was not a fair measurement to the Crown Lands Department, and he distinctly stated that the firm selling the logs should have made a separate scale for the purpose of return to the Crown Lands Department, and upon which the Crown dues should be paid.

"Lumberman" also states that the logs were scaled by a licensed culler. True, but he omits to state that the culler was assisted by an assistant who, upon two occasions, failed to pass the necessary cullers' examination, once previous to the scaling of the logs in question and once since that time, and at present he is not in a position to scale logs cut upon the Crown domain, only as an assistant. The returns sworn to by the culler and his assistant set forth that they had scaled 18,145 pieces saw

logs, containing 1,154,862 feet B.M., and 403 culls, and not 18,878 pieces, containing 1,200,810 feet, as stated by "Lumberman," as the culls were not measured. There were also 255 pieces boom timber, containing 35,659 feet B.M., but as "Lumberman" has not taken this into consideration and gives no returns of same, it is needless to discuss this aspect of the case.

There was another scale made of these logs by two competent and practical licensed scalers, who have been scaling logs cut upon the Crown domain on the Ottawa and in other parts of the province during the past 16 years, whose work during those years has never been challenged, and they are looked upon as two of the most competent men on the cullers' staff. Such being the case, I presume it will be interesting to the public to ascertain the result of their labor. These men were employed by the firm who sold the logs, and having no interest whatever in the transaction, were handed a copy of the contract and instructed to scale the logs in accordance with the wording of said contract. They did so, and the results bore me out in recommending a re-measurement of the logs. They scaled 18,353 pieces logs, containing 1,461,420 feet B.M. I would here ask "Lumberman," if he was disposed to be fair to himself, scalers, rangers and all parties interested, why did he not give the result of this scale to the public.

I presume, Mr. Editor, that you understand that it is the system and duty of all cullers to reduce logs for visible defects only. That being the case, it is improper for cullers to reduce for unseen defects, and I desire to draw your attention and the attention of the public to the fact that for logs scaled in the water, as was done by the scalers mentioned, there should be a large rreduction made for defects than when scaled on the skids, as the logs are reduced for side defects which are not visible on the skids. Would it not be reasonable to suppose that when these scalers, both being licensed, scaled the logs according to contract, the water scale would be under the bush scale? Yet these scalers find 306,558 ft. B.M. more than the bush scale.

In connection with the scale made by the department I desire to say that the men who did the work are considered competent and practical men, and they measured the logs in such a manner as to ascertain the actual quantity of merchantable lumber the logs would produce, and they found the logs would produce 1,547,731 feet B. M., or 18,516 ft. more than the figures given by "Lumberman" and 392,869 feet more than the bush scale. As to the discrepancy between the rangers estimate in this particular case and the bush scale, the ranger's estimate of the logs in question was 1,633,050 feet B. M., and not 1,801,215 feet as stated by "Lumberman." In other words, the ranger's estimate was 73,040 feet B. M. over the actual output, and the culler's actual scale on the skids was 405,148 feet below the actual output. I will now leave the public to judge whether the ranger's estimate or the culler's actual measurement was the most accurate. You will also bear in mind that it was not the intention of the department or its officers to collect the crown dues upon the ranger's estimate, as all the department desire is to have the dues paid upon the actual sound lumber the logs would produce.

Not knowing anything in connection with the scale made over the jack ladder, and the manner in which lumber was treated in the mill, I am not in a position to discuss this question, but when "Lumberman" speaks of an over-run of 20 per cent. over Doyle's rule on account of improved methods in manufacturing, he should be fair to himself and the public and state that all lumber is cut ⅛ inch thick in order to allow for shrinkage and have the board dress plump inch, which means one board in eight, and which is not considered or allowed in calculations made by Doyle's rule. There are other points in connection with the jobbers who cut the logs which could be discussed, and which would be interesting to the public, but as "Lumberman" has not touched on these points, I will refrain from doing so.

In conclusion, permit me to say I will now drop the matter, and will not be drawn into any further correspondence on the subject, as I understand that the whole matter is to be investigated by the courts, but will leave you, Mr. Editor, and the public, to judge whether myself and fellow ranger has in this case sought to build up a reputation for ourselves at "Lumberman's" expense, or have sought to protect the interests of the Crown Lands Department and the people of this province.

Trusting that I have not taken up too much space in your enterprising journal, I remain,

Yours truly, WOOD RANGER.

P. S.—Your editorial in the same issue is timely and to the point—that there is required in this province some uniform system in regard to grading lumber, as the large quantity of mill culls in this case would indicate. As to the present system of scaling logs in the woods, it is as nearly perfect as it is possible to get it, and I can assure you that there is very little friction between the Crown Lands Department, its officers and the lumbermen, notwithstanding the statements of "Lumberman" in your issue of April last.

## CARE AND MANAGEMENT OF BAND SAWS.

By the courtesy of Messrs. Henry Disston & Sons, of Philadelphia, Pa., we are permitted to publish the following on the care and management of band saws, which we believe will be found of interest to saw mill men and filers:

It is generally acknowledged that the band saw is, in a great measure, taking the place of the circular saw for log sawing, and the general introduction of them into new mills demonstrates that the experimental stage is passed and that the band saw as an instrument for manufacturing lumber has come to stay.

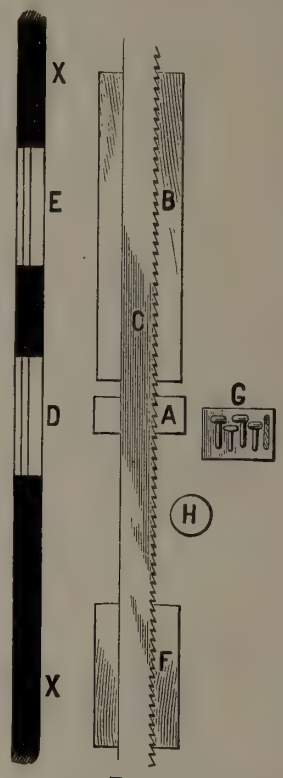


FIG. 1.

(Cut showing proper position of Anvil Levelling Table, Table for hammers and position of operator at work.)

We receive many letters from band mill owners and operators asking our advice as to the best manner to fit, tension and operate the saws to attain the best results in capacity and quality of the lumber made, and at the same time get the most wear out of the saws. It is impossible to lay down a set of rules to fit all cases, or answer correctly any single one without knowing all the conditions under which the saws are run, but we will give a few of the most important points in reference to the care and management of the band saw, which, if followed out carefully, can not be otherwise than a benefit to those who have neglected any of these points.

We will assume that you have a good modern mill, one from a first-class builder who has learned from experience to so proportion and distribute the metal in his machine that the saw can be strained up to the proper point without springing or distorting any part of the machine and have an ample margin of strength to properly stand the additional strain put on it by vibration. Such

FIG. 2.

a mill is the only one a man can reasonably expect to get highest results from.

Vibration is one of the greatest causes of bad results in the use of band saws, and, knowing this, particular attention should be given to the wheels and their shafts, the journals and boxes; the wheels must be round and in perfect balance, and the shafts must run free in their boxes, with no lost motion. Sawyers occasionally complain that their saws, which have been doing good work and giving satisfaction, commence to crack and finally break. This fact is not so surprising when we consider the immense tensile strain the saw is subject to whilst running and the immense number of times in a day that the saw is bent and straightened in running over the wheels, all of which eventually causes crystallization of the steel and cracks the saw.

None of the leading band mill builders are making as much crown to their wheels as they were a few years back, and some of them were making flat wheels; each style has its advocates and will give good results when

FIG. 3.

properly handled, but all of our experiments are in favor of flat wheels, both as to capacity of mill and life of saws, though as some of the best mill builders give $\frac{1}{64}$ of an inch crown in a 10-inch face wheel, it seems a question of education or preference with the operators.

Still, common philosophy shows that the least amount of crown one has in their wheels, the less tension necessary in the saws, which in turn means less hammering and rolling, flatter saws, less kerf, and less tendency to crack.

Perfectly uniform tension is the next important point, for if a saw has fast and loose spots in it, the tendency to crack is largely increased, the fast spot cracking from undue tensile strain and the loose spot from constant buckling of surplus metal.

The tools required for hammering band saws will be a cross-face hammer, a round or dog-head hammer, and a twist-face hammer, each weighing about 3½ pounds. The anvil should have a flat face and be perfectly true.

FIG 4.

Strike light fair blows, using care not to cut or mark the surface of the saw by the hammer, as cracks are apt to start from such marks, particularly when occurring near the edges.

To experiment with, cut a piece three feet long from a worn out or broken band saw, lay it on the anvil, taking your position at H in figure 1. Commencing at the end of the piece furthest from you, place your straight-edge square across the blade, and holding the blade with the left hand cause it to bend or curve, as shown in figure 2. The places drawn to the straight-edge, as in figure 3, are "Fast" and those places that drop from the straight-edge are "Loose." The first object is to make the saw "flat" or stiff, as shown in figure 4, after having knocked down all the lumps. Having located a "fast" place, you will notice that it shows on both sides of the blade similar to the manner in which a lump shows when the saw is lying flat. Remove the "fast" by use of the round hammer, working on both sides of the blade, and trying frequently with the short straight-edge. Be careful at all times to keep the edges true. Now take out the "loose" by use of the same hammer until you have the piece flat or stiff throughout. Then proceed to locate and remove the

"twists," still working from both sides of the blade and using the cross-faced hammer.

Now proceed to open or tension the saw until it shows the required amount of drop from the straight-edge, figure 5, usually about a sixteenth of an inch in a ten-inch saw. The greatest opening should be done in the center of the blade, decreasing gradually to within about an inch and a half from the tooth edge and about an inch from the back edge, varying a little according to the work to be performed. Be careful not to get the saw too open and examine from time to time with the small straight-edge. To insure the saw travelling on the wheels without any lateral motion, the tension must be perfectly uniform throughout the entire blade.

The proper amount of tension varies according to the feed of the mill and crown of the wheel, but $\frac{1}{16}$ or $\frac{3}{32}$ of an inch is about the average used. The use of a tension

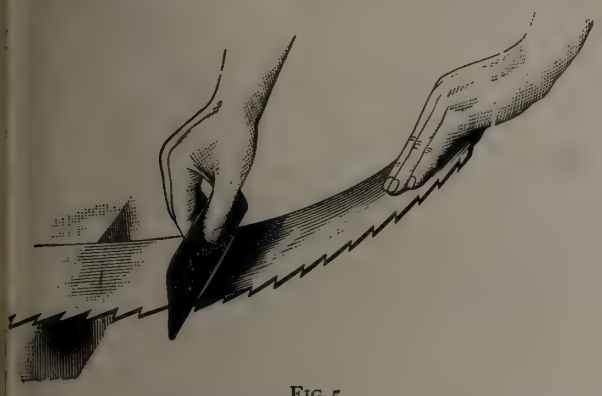

FIG 5.

gauge (see cut) with one edge curved to the amount of tension wanted will be found of great service in adjusting and putting tension in saws. Place the saw on anvil as in hammering, hold the tension gauge square across the blade at arms' length as in figure 2, and if the tension has been properly adjusted the saw will conform to the curved edge of the tension gauge from tooth edge to back. To reduce the amount of tension or stiffen the blade, hammer gently along the edges of the saw (front and back), taking care not to strike nearer than a quarter of an inch from the edge or bottom of a tooth, figure 7. To increase the tension (or "open up") hammer the center or body of blade, testing frequently with the tension gauge, figure 8.

The matter of feed is a very important item in the successful running and life of a band saw. The good sawyer is one who will get all the lumber out of a log there is in it at the rate of speed up to the capacity of the mill, and not strain the saw or machine in so doing. Let the feed "get away" from you but for an instant and a fracture is almost sure to occur.

Do not have sharp gullets to the teeth; this concentrates the bend of the saw, as it runs over the wheels too much at one point. Use as long a gullet as practicable, with no sharp corners or abrupt angles (see cut). Teeth that are too long chatter in the cut and sometimes cause fractures by throwing undue strain on the blade at the root of the tooth.

The swaging and fitting of the teeth is practically the same as in a full swaged gang saw, the swaging being side-filed to a uniform width with an under cut in order to

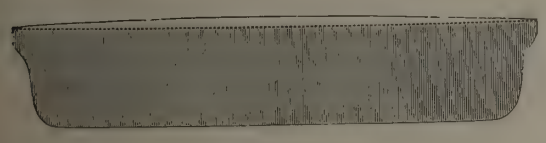

FIG. 6.

TENSION GAUGE.—Made in lengths from 6 to 12 inches, with the curved edge adapted to face of the wheels and the tension required.

leave the extreme point of tooth the widest; the full amount of swage when side-filed should never exceed No. 8 gauge in a 14 gauge saw, and in hard timber can be run on No. 9 gauge. It is advisable to run as little swage as practicable, as it decreases tensile strain on the saw. The amount of hook ranges from four inches to six and one-half inches in a 10-inch saw, being governed by the timber to be sawn and the amount of feed carried; when a properly hammered saw runs perfectly true on the wheels out of the cut, but "chases" back on the wheels as soon as it enters the log, increase the amount of hook until saw retains practically the same position on wheels both in and out of the cut.

In sharpening use a medium soft emery wheel, and do not crowd it on its work, which will result in case-hardening the teeth. Cracks are liable to start from any of these case-hardened spots.

Never let saw come in contact with back guard wheel, as case-hardening is bound to ensue, from which cracks will surely result; in case saw is accidentally forced against the guard and case-hardened, remove the glaze at once by holding a piece of soft emery wheel against back edge while saw is running slowly.

It is essential to have toothed edge of saw tighter than

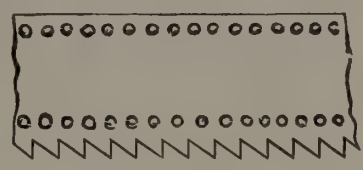

FIG. 7.

any other part, and to accomplish this without materially affecting the uniformity of tension, roll the saw a little longer on the back edge. Let the increased length begin at the point in saw where the greatest tension shows and let the back edge show about $\frac{1}{32}$ of an inch rounding in every five feet, then tilt upper wheel forward enough to make saw have as strong a pressure on wheel at back edge as at front; this will leave part of saw between wheels with a tight toothed edge without subjecting it to that undue strain brought about by making tooth edge tightest by an all tilt movement.

The guides should be lined with either soft Babbit metal or hard end wood and adjusted as closely to the side of saw as possible without heating the blade by friction against the metal or wood. The side of saw would be in perfect alignment with the track and guides adjusted to saw; under no circumstances should the saw be deflected by guides, but have free but small and equal clearance on both sides.

The tensile strain should be only sufficient to prevent slipping of saw on lower wheel; the highest capacity and

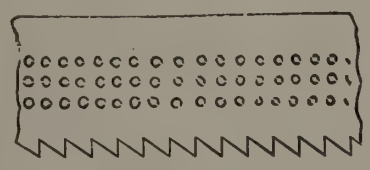

FIG. 8.

best mills now rarely exceed a strain of 5,000 pounds, which is all sufficient if saw and mill are in proper condition, while no amount of strain will make an irregularly tensioned saw or a poorly aligned mill make good lumber, but will instead bring more strain on every part of the mill and cause the saw to crack much sooner. The majority of the large mills are now using the roller or stretcher machine for putting in the tension. The desired effect can be attained in a shorter time and with less injury to the saw than if the tension all be put in by hammer. It is necessary, however, to use the hammer for finishing and regulating after the use of the stretcher.

---

John Morrison, an employee of the Huntsville Lumber Company, was killed by the stub of a tree falling upon him, breaking his back.

Cousult our advertising pages if you are in need of machinery, and mention the CANADA LUMBERMAN when corresponding with advertisers.

Mr. John P. Newman, of Wiarton, writes THE LUMBERMAN as follows: "Permit me to congratulate you on the excellent report of the recent lumbermen's meeting in Toronto."

The Eustis Mining Co., Eustis, Que., have again commenced sinking in their shaft, and for this purpose have placed an order with the Jenckes Machine Co., of Sherbrooke, for one of their special underground hoists, to be worked by compressed air.

It is estimated that 3,000 to 4,000 cords of pulp wood a day enter into the manufacture of paper in the United States. At the minimum, 3,000 cords, the total for a year would be the enormous amount of 900,000 cords. It is safe to call it 1,000,000. If this wood were piled in one continuous string, it would make a wall four feet wide and four feet high a little over 1,515 miles in length. It can be seen what a prodigious thing the wood pulp industry is, and at what a tremendous rate it is devouring trees, mainly spruce. Yet all this wood is converted into paper, which, after being used, vanishes from sight in a few days, and goes back to dust, out of which element the trees grow.

## MICHIGAN LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

THE lumber industry of Michigan is experiencing a boom such as has not been realized for many years past, said to be the direct result of the shutting out of Canadian lumber by the two dollar duty. The quantity of lumber shipped from Saginaw in October was more than double that shipped in the same month last year, and Bay City has also been the centre of some heavy transactions. The trade has been hampered somewhat by the inability of shippers to secure cars for moving the stock.

It would appear that Michigan lumbermen anticipate that some action will be taken by the Canadian governments to restrict the export of saw logs. Operations in the woods both in Michigan and on the Georgian Bay were never, perhaps, so active. Men have been engaged to go into the woods in large numbers, and at better wages. It is estimated that in Michigan the production will be fifty per cent. greater than during any winter for the past five years. In view of the increased value of pine stumpage, we can only conclude that this action is caused by a belief that no logs will be permitted to be exported from Canada, and hence there will be a good demand for both lumber and logs. S. O. Fisher, of Bay City, expectsto lumber about 20,000,000 feet in the upper peninsula of Michigan and in the Georgian Bay country, and Fisher & Turner will lumber some 30,000,000 feet in Canada, the logs to go to Bay City for sawing.

Saginaw and Bay City lumbermen recently rose in arms against the railway companies, claiming that they were not being dealt with fairly with regard to freight rates. The rate from Bay City and Saginaw to the east is supposed to be eighty-four per cent. of the Chicago rate, but it was claimed that the railways had been giving cut rates to Chicago dealers. At a meeting of lumbermen and representatives of the railway, an agreement was reached, and in future if any cut is given to Chicago a proportionate cut will be accorded to the valley dealers.

A log towing association has been formed at Cheboygan, by Thomas Charlton, of Tonawanda, and Thompson Smiths' Sons, of Cheboygan. Three tugs will comprise the fleet.

The A. W. Wright Company, of Saginaw, is shipping a large consignment of lumber to South Africa.

A new hardwood saw mill is being built at Grayling to saw the timber on a tract owned by Frank Buhl, of Grayling, and W. K. Jackson, of Buffalo.

The advance in the price of salt is proving a bonanza for saw mills in the Saginaw Valley with salt block attachments. Over 71,000 barrels were produced in Saginaw and Bay City in September, the advance in price on which amounts to $24,850.

At this end of the river only the mills of Bliss & Van Auken and the Saginaw Lumber and Salt Company are running. The former have several million feet yet to cut, and the latter company will likely continue operations for some time yet, although they will carry over a considerable stock of logs.

This season logs were rafted from the Georgian Bay to Bay City as follows:

| | Feet. |
|---|---|
| May | 9,825,320 |
| June | 37,125,034 |
| July | 43,342,448 |
| August | 22,145,276 |
| September | 20,983,472 |
| October | 13,209,603 |
| Total | 146,630,853 |

The east shore of Lake Michigan has ceased to be a lumber producing district. At Luddington one of the great mills, that of the Pere Marquette Lumber Co., has cut its last pine log, and there is but a few million feet of lumber in pile at Luddington compared to the many millions of feet that used to be sawed there. Luddington has joined Muskegon, Whitehall and Grand Rapids in the group of "has beens" in the lumber manufacturing industry in western Michigan.

SAGINAW, Mich., Nov. 22, 1897.

---

The Bonanza Nickel Mining Co. of Sudbury, Limited, have placed an order with the Jenckes Machine Co., of Sherbrooke, for a 10-stamp gold mill, complete, with two 6-foot vanners. It is their intention to install this mill immediately.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## FUNCTIONS OF A TRADE JOURNAL.

RECENT observations have suggested the writing of a few lines regarding the functions of a trade journal, and THE LUMBERMAN in particular. Briefly, a trade journal is a source of information, by which members may be kept in touch with the transactions bearing upon the trade, and having for its object the improvement of the trade in general. That this is the scope of a trade paper is, we believe, generally recognized, but it is possible that a misapprehension may exist in the minds of some as to how this can best be accomplished.

During the many years of its existence, THE LUMBERMAN has received hearty support from the lumber trade, for which we feel grateful. By the assistance thus given, we have endeavored to place before our readers a creditable journal. As to how far we have succeeded we leave them to decide. It is the purpose to relax no effort during the coming year to render the journal more valuable, and to this end the co-operation of our readers is asked. These columns are open for the free and fair discussion of all subjects affecting the trade or allied interests, and readers are requested to contribute their views. Another way by which assistance may be rendered is by sending in items of news from your locality, which would enable us to compile a fund of information of general interest. Should you contemplate making any improvements to your plant, puchasing additional machinery, erecting a new building, or in any way improving your facilities, you are asked to forward advance information concerning your purpose to THE LUMBERMAN. When about to place an order for machinery, consult our advertisement pages, and mention THE LUMBERMAN in your correspondence.

Now, a word as to the WEEKLY EDITION. Its purpose is to present, as accurately as possible, the condition of the lumber market, both at home and abroad. Therefore, we need scarcely refer to the desirability of obtaining reports of volume of cut, sales of stocks, and information of this character. Only by this means are we enabled to give reliable and up-to-date information.

With this number THE LUMBERMAN closes its eighteenth volume, and before another issue the festive season will have come and gone. To all out readers and lumbermen in general we extend a hearty greeting. May the New Year bring to all increased happiness and prosperity.

## ATTEMPTED BOYCOTT OF CANADIAN JOINERY.

AN effort has been made by the Amalgamated Society of Carpenters and Joiners of Great Britain to boycott Canadian and United States joinery. This society recently issued a circular to its members requesting them not to fix or use foreign joinery, and drawing special attention to the importation of doors, windows, etc., from America, which they claimed were manufactured under unfair conditions and by ill-paid labor. Several weeks were granted before the injunction was put in operation, but on a certain date the members were, in substance, instructed to band together to prohibit the importation of such joinery.

For many years large quantities of manufactured joinery have been exported from Canada and the United States to Great Britain, and this is, we believe, the first organized effort that has been made to restrict importation. The consequences, however, are not likely to be serious, as the trade has now become too well established to be permanently injured by the selfish and ill-advised action of a trade organization.

Before taking such a step, it would have been well had the society endeavored to ascertain the actual facts and conditions. We will consider only the conditions as they exist in Canada, and in this connection will endeavor to prove that Canadian doors, to which particular reference is made, are manufactured under proper conditions, and not by inferior workmen employed at low wages.

By an act passed by the Ontario Legislature on May 5th, 1894, and which is now in force, provision is made for the appointment of councils of conciliation and arbitration for settling industrial disputes arising out of the price to be paid for labor, disagreement with respect to wages, number of working hours, insufficient or unwholesome food supplied by employers, and ill-ventilated or dangerous workshops or places of accommodation. Whenever a complaint arises these councils visit the locality and obtain all particulars of the case. The Ontario Factories Act provides, among other things, that no girl or boy under fourteen years of age shall be employed in any factory, that every factory shall be kept in first-class condition as regards cleanliness, and that proper ventilation be provided. These provisions are generally complied with, and very few complaints are received by the inspectors.

Regarding the wages in our wood-working factories, we have ascertained the average wage paid by several sash and door manufacturers in Canada. One of the largest exporters to the British market writes that the range of men's wages in the factory is from $1.00 to $2.25 per day of ten hours, according to character of work and skill of workman; another that from $1.50 to $1.75 is the average; and another that $1.50 would be about the correct figure. In addition to the adults employed, there are some apprentices learning the trade whose wages would average from 50 cents to $1.00 per day. This would give an average of nearly $1.60 per day for adults and 75 cents for apprentices. Four other firms who manufacture largely for the local trade, but who have also exported doors to Newfoundland, the West Indies and South America, give the average scale of wages as follows: No. 1—$1.50 to $1.80 per day; No. 2—$1.60, $1.75, $1.80 and $2.00 per day; No. 3—$1.25 to $2.00; No. 4—9 first-class joiners, $12 a week; 37 very good, $11; 63 good, $10; 61 pretty good, $9; 49 common, $8.00 to $8.50; 26 3rd year, $7.50; 31 2nd year, $6.00 to $7.00; 19 1st year and apprentices, $3.00 to $5.00. The above figures give an average of $1.60 per day. It must also be remembered that most of the factories are operated the year round, and consequently the average is lower than would be the case if operated only during the building season. For living accommodation the cost in the localities in which the factories are located is not above three dollars per week.

We think the above figures should convince the most skeptical that Canadian doors are manufactured by properly-paid labor and under fair conditions. The average scale of wages compares favorably with that paid in other lines of industry, and we believe that nowhere in the world are laborers given greater remuneration for their services than in Canada, and nowhere does greater harmony exist between capital and labor. The rights of our workmen are respected, and protected by law. The absence of serious strikes is an evidence of the fact that the conditions are such as we have described.

The secret of our success in competing in the British market against home-made joinery is not to be found in the price of labor, but rather in the skilful manipulation of our raw materials by means of improved machinery. England is the great manufacturing nation of the world, but unfortunately she is compelled to import her raw material. Hence Canada, with her forest wealth, becomes a competitor in manufactured joinery, and the country producing the goods at the smallest cost naturally captures the market.

A visitor to some of our woodworking factories will at once be impressed with the marvelous work accomplished by machinery, by means of which the productive capacity is greatly increased and the quality of the work improved as

well. This increased capacity enables the Canadian manufacturer to produce the goods at the smallest possible cost. These are the advantages that have enabled our manufacturers to successfully compete with those of Great Britain.

It is unfortunate that a greater distinction is not made in foreign countries between Canada and the United States. Even in our mother country there is much ignorance regarding Canada. In this may be found the cause of the present protest against Canadian doors, as we understand there was much dissatisfaction with a large consignment of doors that were imported into England from the United States, and which were found to be of very inferior quality. It is possible, also, that Canadian manufacturers are suffering somewhat from the reputation for the sweating system that is reported to exist in some portions of the United States, where female labor is said to be employed in door-making. There is also much antipathy in England to goods made in United States prisons for export, as well as on account of the bitter opposition of American employers to trades unions. In Canada, however, no such conditions exist, and our manufacturers would do well to adopt some means by which foreigners would cease to confound Canada with the United States. This might be done by stamping on all our goods the words "Made in Canada," after the manner of German manufacturers.

## EDITORIAL NOTES.

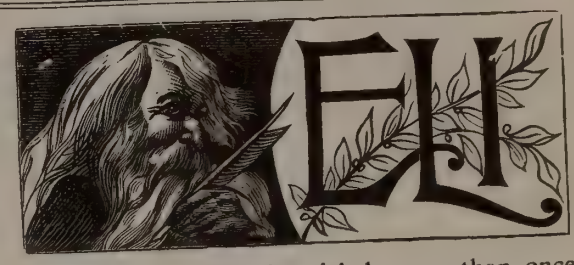
THERE are in course of construction, or projected, in different parts of Canada, a large number of new saw mills. That this should be the case, in the face of the partial closing of the United States market by a two dollar duty on lumber, is significant, and shows that our lumbermen and capitalists have faith in the lumber industry of the Dominion, and that they realize the valuable asset which we possess in our forests. The time is not far distant when Canada will furnish a much larger portion of the world's timber supply than at present.

WE have recently heard the complaint that the lumber trade sometimes suffers owing to an insufficient number of cars to carry the stock. It is claimed that grain is given the preference over lumber as freight, although for what reason it does not appear. Certainly the risk to the carrier is less in the case of lumber than with many other commodities, as should an accident occur the damage is not likely to be great. During the heavy movement of grain this fall both here and in the United States, it was difficult to obtain cars for the shipment of lumber, a condition which is said to be experienced to a greater or less extent every year. We fail to see why the lumber trade should be made subordinate to that of grain.

A PROPOSAL has been made, and has received the support of a number of prominent business men, to establish a commercial agency in London, Eng., where reliable information and statistics could be obtained on all matters relating to Canadian products. The present commercial office is claimed to be unadapted to properly advance the real commercial interests of the country. The present is undoubtedly an opportune time to take such a step, in view of the action of the government in regard to preferential trade. We think there should be placed on exhibit at the agency specimens of the chief products of Canada, of the forest, farm, mine, etc., in order that probable buyers and others interested may become acquainted with the character of our goods. Unfortunately, each day brings new evidence of how little is known even in the mother country of the products of Canada.

THE great exposition that is to take place in Paris, France, in 1900, should not be lost sight of by Canadians, and by Canadian manufacturers in particular. The time is distant a little less than three years, and it is now none too early to begin preparations for making a creditable display of Canadian manufactures and forest products. We are pleased to observe that a deputation from Montreal has drawn the attention of the Dominion government to the matter, and that there is a strong probability of assistance being received from this source. But in addition to a Dominion grant, it would seem fitting that each provincial government should assist to secure the advantages which are certain to accrue to us from a commercial standpoint by having Canada properly represented at this exposition. This year the Dominion of Canada has been advertised abroad as never before, and the benefits therefrom have already commenced to be realized, as shown by inquiries received by manufacturers. Having thus made a start, we should seize every opportunity to further extend our trade relations, and where a foothold is once secured the quality of our manufactures may be relied on to keep the market.

MR. J. S. Larke, commercial agent in Australia, in a letter to Sir Richard Cartwright, calls attention to the unbusinesslike methods of some Canadian manufacturers, and points out that owing to dilatoriness trade that otherwise would come to Canada has gone to the United States. Special reference is made to the timber trade, and an instance is cited where a reliable timber broker in New South Wales was negotiating for goods with a lumber manufacturer in British Columbia, but finally became dissatisfied by reason of the delay and lack of attention to correspondence, and placed the order with a United States firm. Mr. Larke recently called attention to the fact that oak staves for wine casks were wanted, and received replies from United States dealers, but no Canadian manufacturer or dealer intimated any desire to secure the trade. We can readily understand that these circumstances are discouraging to Mr. Larke, and to other agents who may have had similar experiences. Unless they receive the co-operation of manufacturers here, their efforts to secure trade for Canada must prove abortive. We therefore hope, now that the matter has been brought to their attention, that our manufacturers will give the commercial agents no further cause of complaint. Regarding the order for staves, it is only fair to the trade to point out that no oak staves of any consequence are now exported from Canada, and there was probably no Canadian house in a position to supply the stock.



THE fact has been chronicled more than once within the past year that lumber would bring fabulous prices in the Yukon mining region, and saw mill men by the score have been weighing the possibilities of successfully reaching this new Eldorado. A mill in the vicinity of Dyea, writes a miner, is turning out lumber at $100 per thousand feet, and is said to be "supplying an emphatic want." Far away in the interior of British Columbia—where it is the peril of a man's life to go on foot alone—they have managed to take an outfit for converting logs into lumber. On an arm of Lake Bennett there is a saw mill owned by Rudolph & Co., cutting lumber for boats. The man wanting the boat goes into the woods and cuts his own logs, takes them to the mill and pays $70 per thousand feet for having them sawn into boards. If the saw mill owners supply the logs themselves they charge $100 per thousand feet, and if the traveller wants them to build the boat also, from $75 to $150 extra is charged. The mill has a capacity of 9,000 ft. per day, so that if employed full time the revenue would be about one thousand dollars per day. Some manufacturers have endeavored to avoid the hardships of that country by locating mills in civilized parts and shipping the lumber to the Klondyke, but the cost of getting it there is very great, and the venture has not proved a success. The man who goes in with a small outfit has little to lose, and stands a fair chance of coming out on the right side.

* * *

What a blessing it would be to saw mill owners if some commercial use could be made of the immense quantities of sawdust produced. In steam mills it is used as fuel, but in the case of water power mills it is of no service whatever. In the Ottawa valley the sawdust has for years been dumped into the river, but now that this is to be prevented by legislation, the owners of water power mills are face to face with the difficult problem of getting rid of the thousands of tons of this material. Instead of the sawdust being of any value, it is probable that thousands of dollars will have to be expended to consume it. But in these days of inventive genius, it will surely not be long before some scheme is devised to make it revenue-producing. Already novel methods are in vogue in some parts of the United States. In Philadelphia there are about half a dozen dealers in the prosaic commodity. These dealers handle the production of all the local mills and also import quantities from the southern lumber mills. The dealer's wagon goes over a regular route every day, serving the customers, the sawdust being put up in bags containing three bushels and weighing from 40 to 50 pounds. The largest dealers are the cold storage warehouses, each of which take from 50 to 60 bags per week, and the large meat houses, which use about one-third that quantity. The price is from 15 to 20 cents a bag, according to weight, except for boxwood sawdust, which brings as high as $2.50 per bag.

## A PROGRESSIVE LUMBER FIRM.

AMONG the lumber firms in Nova Scotia perhaps that of Dickie & McGrath, of Tusket, is now most favorably situated for doing a large business. This firm is composed of Mr. Alfred Dickie, of Lower Stewiacke, and Mr. Thos. N. McGrath, of Tusket, portraits of whom appear herewith, together with a view of the river front and saw mill. About one year ago they purchased the steam mill and extensive privileges of the Tusket River Lumber Co., and have since

MR. ALFRED DICKIE, Lower Stewiacke.

made some very important improvements to the property. They have put in new furnaces, new box machine, a 1,128 ft. log chain, "live" rolls and other improvements, and have now a daily capacity for sawing 40,000 ft. of long stuff, 30,000 laths, and 400 boxes. The box machine is sometimes used for sawing lobster-trap sills and shingles. Their annual cut is about 8,000,000 feet of logs.

There are loading facilities at their mills for

MR. THOS. N. MCGRATH, Tusket.

crafts of about 200 tons, while at a short distance is a good wharf at which vessels of some 500 tons can lie. Formerly vessels of greater capacity than 500 tons, loading the output of this mill, had to lie in Yarmouth harbor, which meant freighting the lumber nine miles by cart or train; or these vessels could anchor in an exposed position at the mouth of the Tusket river while the cargo was being lightered down to them. In the first instance the expensive freighting absorbed a large percentage of the profits, while in the second it was impossible to make a favorable charter, as the harbor facilities at the mouth of the Tusket did not come up to the ideas of the vessel men.

The lumber manufacturer, as is the case with his compeers in other lines of industry, is ever seeking to increase the margin between the cost of production and the market price of his commodity. Thus it was that Mr. McGrath, the energetic manager of the Dickie & McGrath Company, cast about for a more economical way of getting his output to market. A survey of the situation led him to believe that there was a good harbor for large ships there. He chartered the fine large Yarmouth ship Ruby, of 1,316 tons, with a Yarmouth man, Captain S. B. Robbins, master, as a preliminary step. When the vessel arrived, he arranged with Capt. Robbins and Capt. LeBlanc, of the steamer Ida Lou, to take soundings and make a survey of certain deep water outside the regular channel which serves the Wedge traffic. These gentlemen reported the discovery of a commodious channel running 7 and 6 fathoms (at low tide) which led to a pool of five fathoms, under the protection of Corporon's Cape and Birch Island, in which the Ruby could lie at single anchor and swing clear at all times of tide. Capt. Robbins was delighted with

SAW MILL OF AND RIVER FRONT DICKIE & MCGRATH, TUSKET, N. B.

the new anchorage and the approach thereto, and had no hesitation about bringing his vessel in.

Messrs. Dickie & McGrath secured a privilege along the water front and proceeded with the construction of a wharf, at which vessels of large size can lie afloat at all times of tide and to which navigation is open the year around. Vessels will be permitted to discharge ballast on the wharf. The firm will also bore a well above the wharf, from which it is expected a good supply of water can be obtained for vessels.

This firm has two steam tugs with which to tow their lighters down from the mill. They have lately constructed some of the largest lighters ever seen in these parts, having just completed one of a capacity of 300,000 feet. It is their intention to lighter the lumber down the river during the summer and autumn and pile it on the new wharf for shipment.

Besides their operations at this place, Mr. Alfred Dickie also owns and operates extensive timber limits in Colchester and Pictou counties. He has a large steam mill in connection with his Colchester property, on the Stewiacke river, which has sawn this season over ten million feet. The output of this mill is shipped from Halifax to trans-Atlantic ports. The logs cut on the Picton county property are manufactured by portable mills. Mr. Dickie has shipped from Pictou this season about ten million feet.

## A TIMBER SUIT.

THE Ontario government entered suit against Hiram Sibley, of Rochester, James Beringer, of East Saginaw, and James T. Hurst, of Detroit, to recover $21,000 alleged to be owing for timber dues. The limits are situated in the district of Onaping Lake, and were sold to the defendants for $71,000. Of this sum $55,000 was paid, leaving a balance of $16,000 and $5,000 interest. Judgment was given in the Single Court for the amount.

Mr. Hurst gives the following statement of the case: "The firm of Hale & Booth, of Ottawa, owned the original grant of the land in dispute, and some years ago sold it to Hiram Sibley and Isaac Beringer, who in turn transferred it to me. I only hold a timber claim, and the government put in a man to scale my cut. I had to pay a certain amount per thousand for all I got out. After the timber was nearly exhausted, I found by my books that the lumber as sold to me did not figure up to within several million feet of what the government wanted me to pay for, and I refused to go on, when I found they would take no one's word or records but their own agent's, and the government brought suit against the original owners. Now the decision has been rendered, Hale & Booth will probably come here after me. If they do, I think I will be able to show that, instead of being in debt, the Canadian government owes me a small amount."

Peter Reid, of Lemesurier, Que., is installing a new engine and boiler purchased from the Jenckes Machine Co., of Sherbrooke, which will largely increase the capacity of his saw mill.

Mr. J. H. Walker, who for many years was manager of the Canadian Rubber Company's Toronto branch, has recently severed his connection with the company and established a wholesale agency for rubber goods at No. 88 Bay street, Toronto. Mr. Walker's long and valuable experience in handling this line of goods, coupled with his personal qualifications, will doubtless enable him to make satisfactory business connections and win success in his new venture.

McLaurin & Maclaren, of East Templeton, Que., have just started their new mill, which comprises two band mills, made by the Wm. Hamilton Mfg. Co., of Peterboro', Ont., and steam feed throughout. The mill was erected and built by Mr. T. N. Kendall, of Ottawa, who is now engaged in erecting lath and shingle mills for the same company. The live rolls and other machinery were supplied by the Chaudiere Machine & Foundry Company, Duke street, Ottawa. Everything went oft in splendid shape, and satisfactory in every respect.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. III — TORONTO, ONT., NOVEMBER 24, 1897 — No. 47.

## CANADA LUMBERMAN

PUBLISHED BY

C. H. MORTIMER

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the "Canada Lumberman."*

Toronto, Canada
C H. MORTIMER, Publisher
1895

THE above is a fac simile of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of four 3 cent Canadian postage stamps

THE CANADA LUMBERMAN,
*Toronto, Canada*

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.

35 M 4/4 DRY PINE LOG RUN; ONE CAR 4/4 and one car 5/4 Dry Beech; Hemlock—all sizes. REID BROS., Hepworth Station, Ont.

WANTED.

LUMBERMEN TO ADVERTISE IN THIS column stocks of lumber for sale. Probable purchasers look for this information. Address, CANADA LUMBERMAN, Toronto.

FOR SALE.

A SASH AND DOOR FACTORY, EITHER with or without steam power, and site; also Clapboard and Shingle Machinery. For particulars apply to SAMUEL FREEZE, Doaktown, N. B.

WANTED.

ADVERTISERS ARE OPEN FOR TWO TO three million sup. feet good Spruce Pulpwood for delivery during early part of next year. State lowest price to "ENIXOTARUS," care CANADA LUMBERMAN Toronto.

WANTED.

ALL KINDS OF HARD AND SOFT WOOD lumber, all grades and thicknesses. Quote lowest cash price f.o.b. New York, lighterage free. Will accept draft with bill of lading for 50 per cent. of invoice; balance cash upon receipt of lumber. GREENPOINT LUMBER CO., Brooklyn, N. Y.

POSITION WANTED.

ADVERTISER HAVING HAD 15 YEARS' EXperience in handling men in the woods in connection with logging and export timber operations, is desirous of finding employment in a similar capacity. Sober, and can furnish good references as to character. Apply "BUSHMAN," care of CANADA LUMBERMAN.

FOR SALE.

PLANING MILL, SASH, DOOR AND INTERIor Trim Factory, with Dry Kilns, Storage Sheds, etc., situated in North Tonawanda, N.Y. Two and a half acres of land in the heart of the city. Excellent facilities for railway, canal and lake shipments. Business well established, with good local and eastern trade. Machinery in excellent running order. Factory fully equipped for turning out stock, special and high class work. For price and terms inquire of J. & T. CHARLTON, North Tonawanda, N.Y.

FOR SALE.

PLANING MILL, FACTORY AND SAW-MILL, in Tonawanda, N.Y. Nine acres of land, 950 feet canal frontage; New York Central and Erie railroad sidings; splendid facilities for business. Saw-mill a first-class modern timber and board mill, all modern improvements; electric lighting plant. Factory equipped for stock, special and high class work. One of the best manufacturing sites on the Niagara frontier. Properties will be sold separate or together. For price and terms enquire of J. & T. CHARLTON, North Tonawanda, N. Y.

### BUSINESS NOTES.

Johnson & Co., lumber dealers, Pictou, N. S., are announced to have assigned.

The saw mill, manufactured lumber and property belonging to the estate of John H. Kratz, of the Township of McMurrich, will be offered for sale at the Board of Trade, Toronto, on Thursday, the 2nd of December, at 2 o'clock. This property is situate three miles south from Whitehall Station, on the Ottawa & Parry Sound railway. The lumber consists of 90,000 feet of birch, mill run 1¼ and 1½ in.; 40,000 feet of hemlock, 1 and 2 inches; 30,000 feet of pine at mill, 1 and 2 inch, cutting up and better; 2,000 feet of hemlock, 1 and 2 inch.

### CURRENT TRADE CONDITIONS.

ONTARIO.

The announcement that the Standard Oil Company had purchased several million feet of lumber from Ottawa manufacturers was received with much satisfaction by the lumber trade in general, inasmuch as the stock was composed largely of the lower grades suitable for box manufacture, and which it was thought would be excluded from the United States market by the two dollar duty. We have not learned the exact figures, but understand that the prices compared favorably with those obtained for similar stock in past years. In the Ottawa district the lumber barges have ceased operations for the season, and there is quietness in water shipments. But the quantity of stock moving by rail is of considerable volume. This is also the case throughout the west. The month of November is likely to close with a fair record of lumber shipments, and greater than was anticipated earlier in the season. There is a good local demand for culls, and the stock at the mills is being greatly reduced. A marked revival has taken place in the hardwood trade, and at the present time dealers find difficulty in locating the necessary dry stock. Prices are firm, and notwithstanding the duty, dealers on this side are receiving as high, if not higher, prices than before the duty was imposed. This, of course, only applies to certain stock, such as rock elm, soft elm and maple, of which there is a scarcity. Some basswood is also moving, and shingles are good property. The lumber trade has enjoyed a fairly prosperous season, and the outlook is not altogether without hope.

QUEBEC AND NEW BRUNSWICK.

More lumber has been shipped to the United States within the past ten days than has been the case for several weeks previously. Messrs. Stetson, Cutler & Co., Dunn Bros., Millar & Woodman and A. Cushing & Co. have been the chief exporters. The stock has included planks, deals, laths, clapboards and shingles. The demand for the latter is stronger. Messrs. S. T. King & Sons shipped over one million to Scituate, Mass., and Alfred Mills sent 1,300,000 to Newport. The outlook, however, is not encouraging, owing to the depressed condition of the British spruce market, and the production of logs is certain to be curtailed this winter. In shipping circles there is little doing. Freights are low, and tonnage is being offered for the spring at 39s 6d to United Kingdom ports. There will be the regular fortnightly steamship service to London and Glasgow, and weekly to Liverpool, this winter, but it is improbable that any lumber of consequence will be sent forward.

MANITOBA AND BRITISH COLUMBIA.

The lumber demand throughout Manitoba and the Northwest is subsiding, as the winter quietude now characterizes the trade. In the larger towns and in Winnipeg dealers report a fair demand for finishing lumber and sash and doors. The volume of the British Columbia business is still large, and the mills are taxed to their utmost capacity to supply the stock. Night work has been found necessary by several of the largest mills. The Brunette Mills, of New Westminster, are shipping largely to the east, and have recently filled an order for bridge timber for the derrick of a dredge to be built at Prescott, Ont. The foreign and local trade is also steady.

UNITED STATES.

Unfavorable weather conditions has caused a decrease in the consumption of lumber in the United States, and has put a temporary check to movements by both rail and water. But these conditions have also served to impress upon dealers and consumers the necessity of providing at once for winter stocks. At northern mill points the quantity of pine lumber carried over will be less than usual, and the market will in a large measure be in the hands of the wholesalers, who have ample stocks. The report from Duluth is that piece stuff is all sold out, notwithstanding that during the month the price of this lumber has weakened. The feature of the eastern market is probably the scarcity of cull inch white pine, largely used for boxes. There is also a shortage of 12-inch boards, although there is considerable of this stock held by wholesalers, for which advanced prices are being asked. At Buffalo and Tonawanda there is little 2 x 12 stock, and coarse inch lumber has strengthened. The market appears to have taken a singular turn, and coarse lumber is in greater demand than the upper grades. The spruce market is slow to improve, but dealers are becoming more confident that the spring will bring an active trade. The hardwood trade is surrounded by favorable conditions, and elm, ash, basswood and maple are in constant enquiry. Thick maple in particular is strong, and prices have a tendency to harden, although the orders are mostly for small lots for quick

delivery. Car building lumber and bridge timber are strong factors of the demand. In the Boston market oak and ash are said to be advancing.

FOREIGN.

The reports from the British timber markets are not altogether encouraging. In most classes of wood there is an overstock, and a statement for the ten months of the year shows a very heavy import into the United Kingdom. The figures are: Hewn, 2,413,029 loads; sawn, 6,176,519 loads. For the same time in 1896 the figures were 2,118,733 and 5,267,805 loads respectively. The result is a heavy stock of lumber on the docks, for which it is difficult to find buyers. It was thought that, as the close of the import season drew near, the market would again revive but as yet there have been no indications in that direction. Deal prices are still weak, especially spruce, and holders of stock are becoming anxious to realize. At the late auction sales the ruling quotations have been very low, although the goods were by no means of first-class quality. Hardwoods are steady, with the exception of birch, which has been selling at lower prices than at any previous time for many years. It is rumored that some Canadian exporters have suffered heavy losses. The effect of the engineers' strike has seriously effected the birch trade, and the docks are full of that class of timber, which can be purchased at from nine pence to one shilling per cubic foot. We are reliably informed that eighteen inches wide is selling in London at thirteen shillings per cubic foot.

Regarding next season's trade little can be said. Until the engineers' strike is settled, and the timber business regains its position, there will be little buying. A conference of the Employers' Federation and the Mens' Union is shortly to be held, when some agreement will probably be considered and decided upon. In the meantime the country is suffering by the obstruction to trade.

The South American and South African markets are also overstocked with lumber, and the early foreign demand is not likely to be of great volume.

## STOCKS AND PRICES.

CANADA.

McLachlin Bros., of Arnprior, sent a gang of men to the woods last week.

J. R. Booth, of Ottawa, has a timber camp on the Black river, getting out square timber.

The recent purchases of the Standard Oil Co. in the vicinity of Ottawa are said to include 8,000 000 feet of box lumber from J. R Booth.

Mason & Sons' saw mills at Ottawa closed down for the season last week. The cut was the same as last year, about fifteen million feet.

Messrs. A. Wilson and Thomas Argue, of Shawville, have secured a contract from the C.P.R. for the delivery at Brittania of 25,000 ties.

Messrs. Hanna & Hutchison Bros., of Huntsville, Ont., are in the market for 10,000 cedar ties, hewn or sawn, to be delivered on the G.T.R., between Utterson and Novar, or on Vernon, Fairy, Mary or Peninsula lakes.

Mr. John Carew, of Lindsay, Ont., has contracted with Messrs. McCormack & McLeod, of Bracebridge, to supply from 35,000 to 60,000 ties next spring, and Mr. Sam Parkin will furnish 10,000. Mr. Hugh Thompson, for many years the inspector for the Grand Trunk, is making the contracts for the firm, and is now on a driving trip through the north country.

A dispatch from Halifax, N. S., says: A lumber deal has been consummated by which the timber lands of Hill, French & Co., lumber operators at Musquodoboit Harbor, were transferred to a syndicate represented by D. B. Cummings, of Truro, and Fulton Logan, of Stewiacke. The property sold comprise about 25,000 acres of wooded lands, with a milling plant and water power at Musquodoboit Harbor. The price paid was $50,000.

The following are the prices for sash and doors in Winnipeg:

| | |
|---|---|
| Doors—Discount, 15 to 20 per cent. | |
| 2 ft. 6 in. x 6 ft. 6 in., 1⅜ | $2.00 |

| 10 x 12, 1⅜, C.R | 1.70 |

FOREIGN.

Prices on piece stuff at Manistee, Mich., have weakened during the past week. Cedar shingles have sold at $2.00 on dock there, while pine is quoted at $2.10.

Alpena mills have for the past five years been supplied with about 30,000,000 feet of Canadian logs. This winter there are only two firms operating on the Georgian Bay, while last year there were four.

A conservative estimate places the log input in the Duluth-Superior district this winter at 200,000,000 feet. In addition to this, there are 15,000,000 feet of logs to be carried over, while about 20,000,000 feet may be put in by small jobbers.

F. R. Chesbrough, of Bay City, Mich., and A. M. Chesbrough, of Toledo, have an option on a tract of pine, including 200,000 feet, situated on the north shore of Lake Superior, in Minnesota. It is probable they will purchase the property.

The white pine trade has been fairly active in New York. C. L. & B. J. Becker state that they have been obliged to refuse some orders for barge loads from Tonawanda, being afraid that they could not get them in before the canal closes for the winter.

At Boston mill culls, box, twelve-inch boards and dimension stuff have improved both in price and demand, but the better grades of lumber are still dull of sale. A large concern is reported to have contracted for next season's cut at the same prices as paid this year.

The Timberman announces that a Chicago firm booked an order last week for 1,400,000 feet of rock elm, white ash and cottonwood. Thick white ash is wanted, and elm is exceedingly scarce and brings good prices. Basswood is improving, and birch is also said to be advancing in popular favor.

There continues to be a brisk demand for all classes of shingles at Buffalo, and dealers can only obtain a portion of the required supplies. At Black Rock the Betts Company are putting in a larger stock of lumber than for many years, chiefly No. 2 cuts and better. The Arthur Hill Company have also a large stock.

On November 15th last there were in stock at Minneapolis, Minn., 404,000,000 feet of pine lumber. At the same time last year the stocks on hand were 299,688,000 feet, and in 1895 357,076,000 feet. These figures show that the stock is considerably larger than for the past two years, but the prospects of sale are much better.

Barn boards and common No. one and two dressing are moving readily at Tonawanda; cutting up stock fair to good, with fine common, selects and uppers, steady. Shipments by canal are being rushed forward as fast as possible, notwithstanding that rates have been advanced from $1.90 to $2.10.

The Saginaw Lumber & Salt Co., of Saginaw, Mich., report 50 per cent. more stock moving than at the same time one year ago, while there has been an increase in the price of common stock of $1 per thousand. This concern shipped in the first fifteen days of this month 2,500,000 feet, and finds an active demand for mill culls. The report from Bay City is also encouraging. Prices are firm, and manufacturers will carry over much less stock than usual. Michigan operators will put in a full stock of logs this winter, and it is also stated that Canadian operators will put in over 100,000,000 feet to be sold to Michigan mills.

The Boston lumber market does not improve, while the offerings continue liberal. Prices of lumber most in request are as follows: Spruce—Random cargoes, $12 to $13; frames by car, ten inches and under, $13 to $13.50; 12-in. frames, $14 to $14.50; boards, planed on on one side, $11 to $12.50; extra clapboards, $30; clear, $28; laths, 1⅝ in., $2 to $2.10; do., 1½ in., $1.70 to $1.80; shingles, $1.25 to $1.50. Pine, hemlock, etc.—Eastern pine, $16 to $17; extra clapboards, $35 to $38; clear, $30 to $35; extra cedar shingles, $2.50 to $2.70; clear, $2.25 to $2.50; second clear, $1.65 to $2; hemlock, eastern, $10 to $10.50.

The following prices were realized at auction sale of Churchill & Sims, London, Eng., Nov. 10th: Per steamer "Eda," from Maria, Que. — 12/14 x 3 x 9 2nd spruce, £7 15s; 12/17 x 3 x 9 2nd spruce, £7 10s; 12/18 x 3 x 8 2nd spruce, £6 15s; 12/17 x 3 x 9 3rd spruce, £7 5s. Per steamer "Milwaukee," from Quebec—9 x 3 x 10/14 2nd spruce, £6 15s; 6/8 x 3 x 9/14 2nd spruce, £6; 13 x 3 x 9 unsorted spruce, £7. Per steamer "Parkmore," from Quebec—14/16 x 3 x 12/20, £20 15s; 13 x 3 x 12/22, £21 15s; 12 x 3 x 12/19, £21 10s; 16 x 3 x 11, £20 5s; 13 x 3 x 11, £20 15s; 12 x 3 x 11, £21 5s; 12/16 x 3 x 10, £15 10s; 14/16 x 3 x 9, £16 5s; 12 x 3 x 7, £15. Per steamer "Grangewood," from Quebec — 14 x 3 x 9 white spruce, £6 5s.

## THE NEW YORK MARKET.

The New York market, taken as a unit, has gained ground, coarse pine, hemlock, Eastern spruce and nearly everything in the shape of dry hardwoods being free sellers at holders' prices, says the Review. The market for white pine box lumber probably takes the lead in percentage of gain. A large quantity of the Canadian pine which found its way there prior to the enactment of the new tariff law has been worked off, until it is no longer an important factor in the market. A prominent holder told the writer a few days ago that the advance in the selling price ranged from fifty cents to one dollar, and he felt sure that the market would surely reach $14 when navigation opened in the spring. The market is firm today at $13. A prominent Oswego shipper said he could quickly close orders for every foot he had, at an advance of fifty cents over previous figures, and a large boat load was sold here by a Buffalo shipper several days ago which showed precisely that advance. Careful inquiry shows that the large box makers who possessed means with which to speculate were heavy buyers in the spring months and are still out of the market, while on the other hand, the smaller buyers have worked off their holdings purchased last spring, and are now placing orders with a free hand at the higher prices. When stocks at the large factories are cleaned up, necessitating replenishing, the demand will be strong enough to turn the market over to the seller, where it will probably remain for some time.

The hardwoods are gaining ground steadily, and the market can be summed up in this short sentence: If you have good lumber that is dry, it is no trick to sell it promply at figures ranging from fifty cents to two dollars per thousand higher than ruled in the summer months. This is particularly true of oak if thicker than inch, black ash and soft Western elm.

## FIRES.

The steam saw and grist mill at Wetaskiwin, N.W.T., owned by Leopold Benz, was burned recently.

Ferdinand Ballavance's saw mill at Sayabec, Que., was last week destroyed by fire. The loss is given as $3,000.

The saw mill of Pierre Fortin on Richelieu street, St. Cunegonde, Que., was totally destroyed by fire last week.

The sash and door factory of J. N. Ducherme, situated between Vinet street and Napoleon road, St. Cunegonde, Que., was gutted by fire recently, at a loss of $25,000. The plant was owned by H. Fauteux.

## BUSINESS NOTES.

Ezra C. Shand, maker of doors and sashes, Windsor, Ont., is offering to settle liabilities of $4,000 at 70 cents on the dollar.

The Lestershire Lumber & Box Co., o Lestershire, Broome County, N.Y., has been incorporated, with a capital stock of $60,000.

Archibald Affleck's planing mill at Lanark, Ont., has been sold to John W. Stewart for $4.000. Mr. Stewart will take possession o December 1st.

Charles Heath, assignee, will sell at South River, Ont., on Saturday next, 27th inst., the saw and shingle mill of Samuel McAdam, of South River.

The failure is announced of Henry Sherry, an extensive lumberman of Oshkosh, Wis. Mr. Sherry estimates his liabilities at nearly $1,000,000, but claims that he expects to pay 100 cents on the dollar. The failure also involves the following companies: Ingersoll Land and Lumber Company, Eland; Mineral Lake Lumber Company, Mineral Lake; Sherry Lumber Company, of Neenah, doing business at Amwa; Sutton Manufacturing Company, Park Falls Paper and Pulp Company, and the Park Falls Lumber Company, the last three doing business at Park Falls.

The ship Loanda will load deals at St. John, N.B., for w.c. England, at 41s 3d.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5 cents per 100 lbs.; Arnprior to Montreal, 7 cents; Parry Sound to Montreal, 12 cents per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2 20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively: Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c. From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, and Michigan Central Railways, the rate is 14c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and no advanced rate is charged for hardwoods.

Mr. Geo. A. Fowler, lumber agent for the C.P.R., at Ottawa, writes as follows under date of Nov. 17, 1897: The winter rates went into effect on the 15th inst., and in so far as lumber is concerned the only rates which are materially affected by the change are the rates to Montreal, Quebec and points taking same rate. During the summer season we have on seasoned soft wood lumber weighing not more than 3,000 lbs to the M ft. rates as follows to Montreal: From Ottawa $1.00 per M., excess over 3 0 0 lbs. to the M ft. to be charged for at 4 cents per 100 lbs.; from Arnprior, $1.50 per M, excess 6 cents per 100 lbs. The rates to Quebec during summer season are $2.00 per M ft., excess 8 cents per 100 lbs.; from Arnprior $2.50 per M, excess 10 cents per 100 lbs. The rates during the winter season; in effect from 15th inst., on all kinds of lumber to Montreal are, from Ottawa 5 cents per 100 lbs., from Arnprior 7 cents, and to Quebec from Ottawa 10 cents per 100 lbs., Arnprior, 12 cents; minimum carload, 30,000 lbs.

The rates to Boston and New England points, also all rail rates to New York and New York points, remain unchanged. The rates to New York and New York points via barge from Albany will remain in force until close of navigation.

# THE RETAILER AND Wood-Worker

## LOOKING AHEAD.

It hardly need be remarked that the dealer who never looks ahead, but waits for a demand to develop before preparing to meet it, may not be "looking for trouble," but he is doomed to find it.

The customs and exigencies of the trade are constantly changing in a manner and in directions to demand constant vigilance and discernment to intelligently keep up with them.

We have upon previous occasions ventured to suggest that the management of a retail lumber yard is derelict—unequal to its opportunities—when it does not see and comprehend and take advantage of what its trade requires, and is likely soon to need. If the dealer knows more about these things than his customers and can instruct them regarding what they need, so much the better for the dealer; but if he bestows upon impending conditions, even in a conservative measure, the intelligent study of which the average dealer is capable, he is likely, thereby, to be spared a good deal of otherwise needless sacrifice and disappointment.

The nature and volume of maturing crops, the markets and general conditions considered in combination, will ordinarily afford a sufficient basis or reasonably safe calculation.

A reasonable assurance of good crops in a given locality, with a like certainty of fair or good prices, means additional lumber trade of certain kinds, just about as sure as anything earthly can be. Nor is the resulting trade going to be restricted in such a contingency to farmers' trade only. In the region where farmers are in a position to buy and improve, other trades and labor and every sort of pursuit, the sum of which stands for prosperity, are sure to share in the movement in due time. Except to the fellows who get into office, there is, generally speaking, no mere class prosperity possible in this country for any great length of time. If, primarily, the farmers are prosperous and general confidence in the situation is sufficient at the same time to keep the industries actively alive, labor is thereby assured of employment and the community at large is assured of what we call prosperity. Under such conditions, the demand expands, prices advance, profits flow and everybody with the ability, strength or industry to "pitch in," gets a share accordingly. The essence of the whole fabric of production, industry, trade and commerce inheres in the one word, "profits," because without gain there can be no incentive to inspire active operations.—Timberman.

---

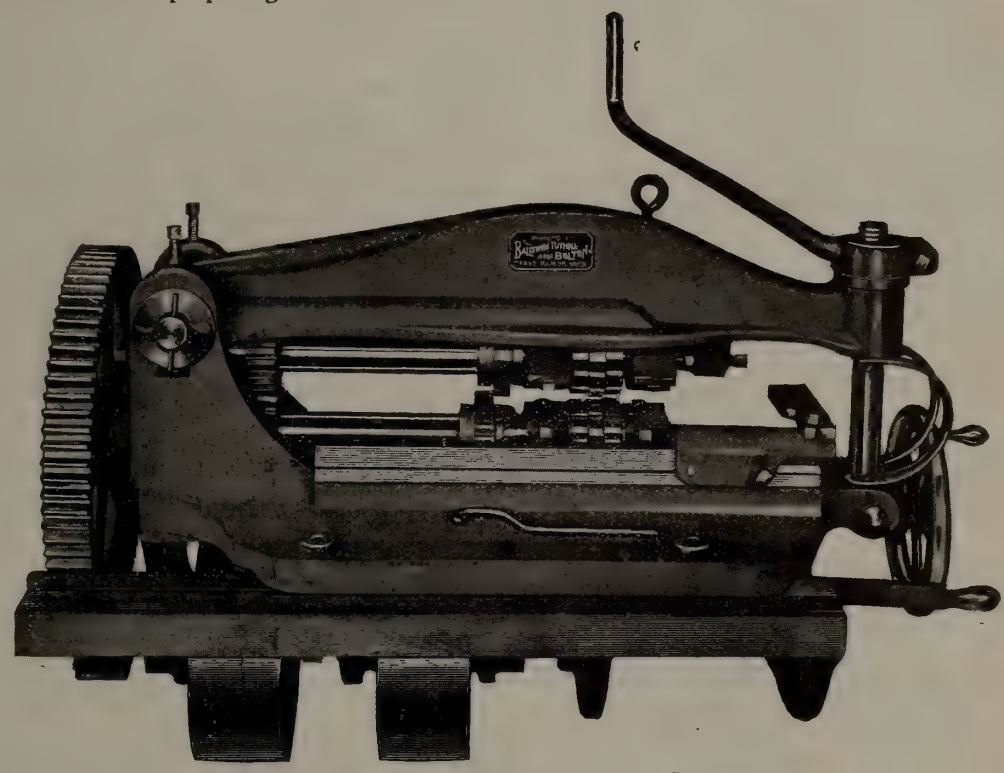
A. J. Mitchell, planing mill, Rodney, Ont., has been succeeded by F. A. McCallum.

The Cookshire Mills Company, Cookshire, Que., wil build a new box factory at that place.

## BALDWIN, TUTHILL & BOLTON'S MOVABLE SAW STRETCHER AND SHEAR.

The fine tensioning of bands, gangs, and band re-saws being so essential to successful work, it follows that every operator of such saws should be interested in high grade saw stretching or tensioning machines, and one of the styles made by Baldwin, Tuthill & Bolton, Grand Rapids, Mich, is illustrated herewith.

This machine is offered by the makers as the most complete stretcher in the market, and the only one equipped with the shear feature, which is very serviceable in preparing saws for retooth-



Bolton 12 Inch Movable Stretcher and Shear.

ing or cutting down pieces to braze in. The machine itself is mounted on a bed-plate or track, over which it is moved laterally by means of hand wheel, thus adapting the rolls to any part of the saw, and avoiding the necessity of moving the saw itself, laterally. The machine is unusually heavy and powerful, and is guaranteed to act on the hardest saws successfully. Special guides are furnished for tensioning and shearing; elliptic springs raise upper roll from saw as pressure is diminished, and the pressure is obtained by a coarse lead screw, maximum pressure being secured by less than one-quarter turn of the lever. Motion in either direction may be secured instantly.

The cutters for shearing feed the saw through at the regular speed of machine as run in tensioning, and make a clean, smooth, true cut of any width. This is a feature which the manufacturers state is not found on any other machine. When not required for use the cutters may be set to one side out of the way, by use of spanner wrench furnished.

Given material strength and power, the success of a stretcher then depends entirely upon the make and grind of the rolls. The rolls are made up solid of the finest steel tempered by an expert and ground mathematically true on the most approved segments. In fine construction, finish, power and general efficiency, the makers claim their machines are unapproached, and furnish their products with an unqualified warranty.

Baldwin, Tuthill & Bolton make saw stretchers as follows: Bolton 12 inch movable stretcher and shear (illustrated), Bolton 12 inch stationary stretcher and shear, Bolton 12 inch stationary stretcher, Bolton 9 inch stationary stretcher, Bolton 6 inch stationary stretcher.

These are distinct machines of different design, adapted to varying requirements, and priced as low as their high grade construction and intrinsic value will permit. These machines are all fully described and illustrated in a new 200 page catalogue for 1898, which is one of the finest machinery catalogues issued, and illustrates a large line of some 60 or more saw fitting machines and tools adapted to bands, gangs, circulars and band resaws. This book also contains a lengthy treatise on the practical side of tensioning and fitting saws, which will render it invaluable to saw filers.

All persons interested in saw stretchers or other saw fitting equipment should send for a copy of the catalogue, and quotations may be had promptly by addressing Baldwin, Tuthill & Bolton, Grand Rapids, Mich., U.S.A.

---

A process is said to be in vogue by which it is claimed that poplar can be made so tough as to require a cold-chisel to split it. The result is obtained by steaming the timber and submitting it to end pressure, technically "upsetting" it, thus compressing the cells and fibers into one compact mass. It is the opinion of those who have had experience with the process that wood can be compressed 57%, and that some timber which is now considered unfit for such work as carriage building could be made valuable by this means.

# THE NEWS.

—L. P. Westergard has opened a lumber yard at Fox Warren, Man.

—Robertson & Hackett, of Vancouver, B. C., have put in a new engine.

—The Utterson Lumber Co. have put in a planing mill plant at their Utterson mill.

—The Three Rivers Iron Works Company will probably increase the size of its works.

—The Rathbun Company recently shipped several carloads of doors to South Africa.

—Typhoid fever is said to be prevalent in the lumber districts of the Gatineau valley.

—Gilmour & Co.'s saw mill at Trenton, Ont., closed down recently, after making a small cut.

—The Pacific Coast Lumber Co., of New Westminster, B. C., has added an upright shingle machine.

—Joseph Campbell, of Newton, N. B., is shipping large quantities of spool wood to Glasgow, Scotland.

—H. Stewart, of Detroit, was recently in Parry Sound looking for a suitable location for a shingle mill.

—Kenectel & Young, of Turtle Lake, have purchased a shingle mill from Buchner & Reid, of Orrville, Ont.

—A large boiler in the Royal City Mills, Vancouver, B. C., exploded on the 4th ultimo, injuring three employees.

—Mr. P. Mutchenbacker has withdrawn from the Snider Lumber Company, of Gravenhurst, and will carry on a lumber business at Rosseau Falls.

—The Rainy River Boom Co. will improve and strengthen its booms very considerably this fall to avert trouble from the usual spring freshet.

—Shepard, Farmer & Co., of Boston, are reported to have booked an order for 1,200,000 feet of yellow pine for railway construction near Montreal.

—H. B. Mitchell, a lumber dealer at Selkirk, Man., was recently accidentally shot in the arm while hunting, and it is reported that he will lose his arm.

—An action in which $70,000 is claimed has been entered against Alex. Fraser by Andrew A. Buell & Co., of Ottawa. The case arises out of a dispute concerning certain timber limits.

—Mr. E. Methot, of Cap St. Ignace, intends rebuilding his saw mill and installing two 40 h. p. boilers, which are being built by the Jenckes Machine Company, of Sherbrooke, Que.

—Buchanan Bros., who have managed the Thompson mill at Gravenhurst, Ont., have purchased a shingle mill at Powassan, which is now being put in readiness for manufacturing.

—John McLaren, of Buckingham, and Louis McLaurin, of Templeton, are constructing a new steam saw mill on the south shore of the Ottawa river at East Templeton. It will cost about $30,000.

—Spencer & Spencer, of Frelighsburg, Que., are enlarging their saw mill, and for this purpose have placed an order with the Jenckes Machine Co., of Sherbrooke, for one of their 25" Special Crocker turbines.

—A reorganization has taken place in the McEachren Heating and Ventilating Company, of Galt, Ont. The business in future will be carried on by J. D. McEachren and W. D. Sheldon, under the same name as heretofore.

—During the month of September heavy losses were incurred by the insurance companies from saw mill fires. There were eight fires, which brought an insurance loss of $116,800, or nearly one-third of the total loss for the month.

—Bentley & Co., of Port Greville, N. S., are operating a portable mill on the property at St. Martins. The firm are getting out a lot of the largset trees and shipping them full length in the round state to the United States market.

—It is stated that a large lumber mill at Ashland, Maine, with a capacity of 20,000,000 feet per annum, will remove to Fredericton, N. B., and be erected on the Simond's property. Scarcity of water is given as the cause of removal.

—It is understood that Gillies Bros. Company, of Braeside, Ont., will build at Calabogie Lake a mill to manufacture cedar ties, shingles, basswood, elm and ash. Another mill may probably be built at Braeside for the manufacture of box boards for foreign shipment.

—Price Bros., saw millers, Quebec, have placed an order with the Jenckes Machine Co., of Sherbrooke, Que., for one of their special refuse burners, 18 feet in diameter and 120 feet high, for their Montmagny mill. This is the second burner of this size that the Jenckes Company have supplied.

—A correspondent in Buenos Ayres writes that the Argentine tariff for next year recommended by the president of the republic contains certain increased duties, among which is a duty of 66 per cent. on yellow pine. The imports of lumber to the Argentine Republic during the year 1896 amounted to $2,926,854.

—The output of lumber in Alaska next year, if it can be compiled, ought to be interesting. There will be over 100 new mills in that region, principally of the portable variety, but the transcontinental roads will not worry about freight rates, nor will the cargo trade be menaced. The Alaska saw mills will devote their attention entirely to boat and house building lumber.

—The Assistant Commissioner of Crown Lands for Ontario has sent a letter to lumbermen requesting that they furnish a statement showing the quantity of logs and round timber proposed to be taken out this winter. The information is wanted to assist the government in determining what steps should be taken regarding the export of saw logs, the statement having been made that Michigan licensees were preparing for an enormously increased cut.

—Messrs. George F. Roy & Sons are moving their saw and shingle mill from Starrat, Ont., to the south end of Doe Lake, in the township of McMurrich, where they will have increased facilities for shipping. From one end of the lake they can ship on the G. T. Railway, and at the other end on the Parry Sound Railway. During the last seven years they have made the remarkable record that no man was ever crippled in their mill, and they never had a break down that cost over five dollars for repairs. There post office will now be Sprucedale, Ont.

—A company of Minnesota lumbermen are said to be considering the building of a canal from Buffalo Bay, on the Lake of the Woods, to the Seine river. There is a fall of 300 feet and over between these points, and the scheme embraces the floating of logs to Winnipeg to be sawed into lumber from the Lake of the Woods timber limits, the supplying of good pure water from the lower end of the lake to the city, and a water power system. It is improbable that the scheme will ever be undertaken, as it is difficult to see how it would be made a paying investment.

—There is a proposition before the Dominion government from the Rathbun Company, of Deseronto, for the manufacture of wood alcohol in Canada. This is a product that is not manufactured in the Dominion. It is used in the United States and found to be very cheap and perfectly suited for the manufacture of methylated spirits, such as is not drinkable. The wood alcohol leaves a charcoal which is disposed of at a profit in the States for smelting purposes. Up to the present there has been no market for the charcoal in this country, but now it is said that since smelting has developed into an industry in Canada the charcoal might very easily be disposed of.

—A member of the Dominion parliament, referring to the recent bush fires, said: "It is my firm conviction that the starting of a fire in the woods should be made a criminal offence, and punishable by heavy penalties. I do not believe that there have been many instances of large bush fires in recent years which have not been the direct outcome of gross neglect and carelessness. Our forest wealth is worth to us as much as any gold mines; much of it has been swept away by the devastation of great fires. Is this to continue? If it does there will very soon be little left. The provincial governments would do well to take the matter into their consideration very seriously. It properly belongs to them, and would, if the law were enforced a few times, be soon understood."

—Speaking of his recent exploration to the Hudson Bay, Dr. Bell says: "The forests extend two-thirds of the way up either shore of Hudson Bay, and further north in the interior on both sides. Around James Bay and to the south of it much of the timber will be valuable for sawing into lumber and for other purposes. The verge of the forests crossed the northern part of the Labrador Peninsula from near Richmond Gulf to Ungava Bay in Hudson Strait, but except around this bay no timber was to be seen on any other part of the strait. Driftwood, brought down by the rivers falling into Hudson and Ungava Bays, was strewn along the southern shore of the strait, and was very useful for fuel. The small quantity of wood stranded on the northern side had perhaps come from Siberia, after drifting for thousands of miles with the ocean currents which set from one coast to the other."

## CASUALTIES.

—Wm. Sullivan, jr., of Bass River, N.B., aged 23 years, while working in the lumber woods near Berlin Falls, N. H., was killed by a falling tree.

—While assisting in building a skidway at J. D. Shier's camp, beyond Dorset, Andrew Kirpatrick, of Uffington, a young man 24 years of age, was instantly killed.

—While C. F. Barker, proprietor of the Burford lumber mills, Burford, Ont., was at work at the mills on Saturday, a big log rolled over him, breaking his collar bone and bruising him terribly. He was injured internally.

## PERSONAL.

Mr. Francis Dubee, lumberman, of Sussex, N.B., died recently, in his sixty-sixth year.

Mr. Robert Kay, a prominent lumberman of Upper Sackville, N.B., is dead. He was 60 years of age.

Mr. Daniel McNab, who is said to have erected the first saw mill in the Nipissing district, died at Powassan, Ont., last month.

Mr. Edwin Haynes, of the Timber Trades Journal, London, Eng., arrived in New York on November 6th, in the interest of his paper.

Mr. R. M. Beckett, of Dobell, Beckett & Co., timber merchants, Quebec, sailed last week for his home in England, where he will spend the winter.

Mr. John H. Eby, bookkeeper for the Southampton Lumber Co., is receiving the congratulations of his friends upon his recent marriage to Miss Pyke, of Elmwood.

Mr. W. Malcolm Mackay, of St. John, N. B., has recently recovered from the effects of a serious sprain, which incapacitated him from business for about six weeks.

While Dr. George Kennedy, of the Ontario Crown Lands Department, was attending the recent Caledonian banquet in Toronto, burglars entered his residence at 147 Bloor street west. They secured $2.58 in cash, a gold medal and diamond ring.

Mr. Honore Petit, M.P.P., of Chicoutimi, returned last month from Europe. He was over in the interests of the spool wood industry, and reports the English market active. Millions of feet will shortly be sent forward by Canadian exporters.

Captain Charland died at Windsor, Ont., on the 12th inst. He was born in Quebec, and when sixteen years of age commenced in the lumber business, and had been engaged in that line from Quebec to the Gulf of Mexico. He helped to build the docks of the Great Western Railway in Windsor.

One of the oldest and most respected lumbermen of Buffalo has passed away, in the person of Mr. George R. Haines, of the firm of Haines & Co. Deceased was born in New York state in 1833, and in 1861 entered the lumber business at Buffalo with his father, who has since died. Alfred Haines and Mr. E. Preisch were his partners.

Mr. Charles K. Eddy, head of the white pine firm of C. K. Eddy & Sons, Saginaw, Mich., with large timber interests in Canada, was married in Chicago on November 3rd to Miss Chapman, of Penobscot, Maine. Mr. Eddy is seventy-six years of age, and his bride is said to be sixty-eight. Mr. Eddy has amassed a fortune in the lumber business.

Early in November death removed Major J. D. Hay, vice-president of the firm of Davidson & Hay, wholesale grocers, and a popular and highly respected citizen of Toronto. Deceased was born on November 13, 1854, his father, the late Robert Hay, being a native of Perthshire, Scotland, and for many years M.P. for Centre Toronto. Besides being connected with the grocery business, his firm for many years carried on extensive lumbering operations. Major Hay took an active interest in military affairs, and as lieutenant of the Tenth Royal Grenadiers, rendered signal service during the Northwest Rebellion. In 1892 he received the rank of major, retiring in 1896, but retaining rank.

# WOOD PULP DEPARTMENT

## COMPETITION FOR BRITISH TRADE.

Canadian manufacturers have within the past two years captured a portion of the British pulp trade from the Scandinavians, as has been shown from time to time by tables published in this department. The Canadian pulp is said to be of excellent quality and preferred by papermakers who have given it a trial.

The Scandinavians, who have heretofore practically controlled the British market, fully realize the competition that has been, and will be, experienced from American pulp, and are taking steps to prevent, as far as possible, the loss of their market. At their request, the Consul of Norway and Sweden at Quebec prepared a report on pulp manufacture in Canada. He states that the pulp shipped from the mills contains from thirty-three to fifty per cent. of moisture. The Consul does not think there is any reason to fear serious competition in wood pulp, but in paper and cardboards European mills may have to contend with Canadian competition. The Sault Ste. Marie mill and the Laurentide Company's mill are putting in paper-machines, and will consume their own production of wood pulp. The above mills and the mills in Nova Scotia can compete advantageously with Scandinavian mills. The cost of the pulp is stated to be £1 18s to £2 8s from "stump to the car," with cost of transport to shipping port to be added.

The Scandinavians are shrewd business men, and the Canadian pulp manufacturers have no easy task before them in replacing their goods. Their efforts to obtain reliable information are worthy of commendation, and should serve as a lesson to our manufacturers. If we expect to accomplish much in the way of an extension of trade, no stone should be left unturned to make known throughout European countries the extent of our resources and quality of our pulp.

If past and present circumstances can be taken as a criterion, it will only be a matter of a short time until a very large portion of the British pulp trade will be supplied by Canadian manufacturers. British capitalists are looking to Canada as a desirable field for investment, and no more promising industry can be found than that of the manufacture of pulp. Within the past six months several foreign manufacturers have visited this country in search of information as to the possibilities of obtaining a supply of pulp and pulp wood, and each have expressed surprise at the abundance of available water powers and extent of our natural resources. We observe that the British Columbia Wood Pulp and Paper Company, an English concern, is about to establish an extensive plant at Alberni, B. C., to manufacture paper and pulp, having in view the marketing of its surplus product in China and Japan.

The Paper Mill, of New York, admires the way the Scandinavians endeavor to fortify themselves against American competition in paper and pulp. This journal says: "They apprehend a sharp competition with the American industry, and so they are coming to America for munitions of war with which to fight us in the English field. Plans for a large paper making plant, to be erected in Sweden, are now being prepared in Appleton, Wis., and a number of western builders of machinery are figuring on the equipment."

---

During October 9,368 rolls of pulp were shipped from Montreal to the United Kingdom.

Donald Fraser & Sons, of Fredericton, N. B., have for some time been considering the establishment of a pulp mill. Mr. Fraser is now in communication with Scotch capitalists with a view to interesting them in the scheme.

## PULP NOTES.

The Canada Paper Company is putting some new pulp grinders into its mills at Fraserville and St. Raymond, Que.

Mr. A. T. Drummond, of Montreal, points out the advantages for manufacturing sulphite fibre in Eastern Ontario.

The Laurentide Pulp Company, of Grand Mere, Que., have made application for incorporation and for additional privileges in connection with the manufacture of pulp, paper and lumber.

D. G. Loomis & Sons are erecting a large brick building at East Angus, Que., for the Royal Paper Co.'s new mill. It is the intention of the company to make it one of the most convenient and up-to-date pulp mills in the Dominion.

The Chicoutimi Pulp Co., Chicoutimi, have decided to extend their mill, and have placed an order with the Jenckes Machine Co., of Sherbrooke, Que., for nine of their perfect 10-plate screens, an additional Crocker turbine and a 50 h. p. steam boiler.

Wood Pulp, London, Eng., says: "We understand that a new Scottish Canadian Company has been formed for the manufacture of sulphite pulp. The name of the company is the St. John Sulphite Company, and as far as we have yet learned the board seems to be a strong one."

A syndicate composed, it is said, of two Chicago men and Mr. F. H. Clergue, president of the Sault Ste. Marie Pulp Company, has purchased a nickel property in Algoma for $90,000. The intention of the new owners is to convey the ore to Sault Ste. Marie to be treated and to produce sulphuric acid from the sulphur extracted from the ore, for use in the manufacture of pulp and paper.

Probably the largest penstock ever used in connection with the development of water power in Canada is being built at the works of the Laurentide Pulp Co., Grand Mere, on the St. Maurice river. The main penstock is 14 feet in diameter, made from 7/16" steel plate, 550 feet long, and with its branches, has used in the neighborhood of three hundred tons of plate. The Jenckes Machine Co., of Sherbrooke, Que., have the contract.

The steamship companies are said to have refused to take on pulp at Quebec, which is seriously affecting the pulp manufacturers in that vicinity who are exporting to Great Britain. The St. Raymond Pulp Company, of St. Raymond, about 36 miles north of Quebec, have been compelled to send their pulp by rail to Montreal, a distance of 180 miles, there to be loaded on the ocean vessels. Notwithstanding this drawback they are still shipping to British ports.

HERCULES BELTING The BEST in the World....

WEARS LONGER and WORKS BETTER than any other Belting on the Market.

HERCULES BELTING is constructed on a scientific plan. The Duck used is Extra Fine, costing nearly twice as much as that used in any other Rubber Belting. Every inch of it is frictioned with good rubber (not shoddy). Drop a postal card for list and discounts to.....

## THREE TYPES OF WATER WHEELS.

The attention of our readers is directed to the advertisement in this issue of Mr. Madison Williams, who has purchased the foundry and machine shop of the Paxton, Tate & Co. estate, Port Perry, Ont. Mr. Williams' predecessors were for many years well and favorably known throughout Canada as the pioneers of water wheel manufacture. Their first production in this way was the "Leffel" wheel, which is perhaps more widely known than any other water wheel made, and has never been superseded in point of efficiency under certain conditions of operation and water supply. Varying conditions, however, called for wheels of special design and proportions, and to meet these requirements many improvements have been added and are embodied in the "Vulcan" and "Perfection" wheels, which have stood the most severe tests, so that for whatever purpose a wheel may be required, whether for heavy or light machinery, driving milling, mining or manufacturing, and under any condition of water supply, high or low head, ample or little water, it is possible from these three types of wheels and the great variety of sizes (23 sizes in each, from 6⅝" diameter to 8 feet) to find one that will absolutely fill the bill. In addition to their water wheels, Paxton, Tate & Co. have for many years turned out modern circular saw mills, shingle machines, lath mills, feed grinders, bark mills, etc., and have had their goods in demand in every province of the Dominion. To this long-established business Mr. Williams, as sole owner, brings practical experience, (having spent many years in the employment of Paxton, Tate & Co.,) fresh capital, a good name and great earnestness in his determination to please customers and make his products a synonym for excellence and money's worth. The shops have been thoroughly overhauled and are already manned with a full staff of competent mechanics in every department, and we are advised that from enquiries and orders received during the past week, Mr. Williams will not only have the good will of all customers of Paxton, Tate & Co., but a full share of the new business springing up throughout the country, which the merits of his machines deserve. Mr. Williams has our best wishes for the permanent success of his venture into the manufacturing world.

---

The village of Grenville, Que., offers exemption from taxation for twenty years for the establishment of a pulp mill. The location is said to be a good one.

Taylor Bros., paper makers, of Toronto, recently received an order from Yokohama, Japan, for 110 tons of paper. Mr. George Anderson reports good prospects for developing a trade in paper with that country.

Among the latest uses to which wood pulp is being put is the manufacture of barrels and casks. The great difficulty in the past has been the production of removable heads. By a plan just patented one head of the cask or barrel is moulded in while the other is made to fasten in place by a series of keys. It is thought that by this process a highly popular barrel will be produced, and, in a measure, revolutionize the cooperage business.

---

Geo. Peters and W. Shaw have purchased a site at Merlin, Ont., for a planing mill, and intend to build.

The Jenckes Machine Co., of Sherbrooke, Que., are building a very large 20 × 10 crusher for the Wilson Carbide Co., St. Catharines, Ont.

It is understood that the Exploits Lumber Company, of which Mr. C. T. Hilliard, of Amherst, N.S., is manager, will erect pulp mills in Newfoundland. This company have acquired extensive spruce and pine timber lands in the vicinity of Botwoodville.

The firm of Wm. Ritchie & Co. are removing their saw mill from Granite Piles to Three Rivers, Que. They will build on the government island at the mouth of the St. Maurice. The St. Maurice Lumber Company is also building a large saw mill to replace the one that was burned this fall.

CORRESPONDENCE SOLICITED

F. Smith has decided to rebuild his planing mill in Goderich, which was burned recently.

Ovide Lefebvre has entered suit for $2,000 against E. Dansereau, of Papineauville, Que., for injuries sustained while working in his saw mills.

The Takush Harbor Timber Company, Limited, at a recent meeting in London, Eng., passed the following resolution: "That it has been proved to the satisfaction of the directors that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily." Mr. Victor George Levett was appointed liquidator.

THE J.C.McLAREN BELTING Co MONTREAL

## TRADE NOTES.

Messrs. Mowry & Sons, of Gravenhurst, the well-known manufacturers of saw and shingle mill machinery, have recently commenced the manufacture of "The Jubilee" printing press.

The large Jewell filters for the town of St. Hyacinthe have arrived and are being installed. These filters were built throughout by the Jenckes Machine Co., of Sherbrooke, and the work is said to reflect great credit on this firm.

In a letter to the E. R. Burns Saw Company, of Toronto, E. H. Heaps & Co., of Vancouver, pay a high compliment to the value of the saws manufactured by this firm. They state that they have just ordered a shingle machine from the Lloyd Mfg. Co., of Kentville, N.S., and have recommended that the two saws required be purchased from the Burns Company, as, having made a specialty of their saws in the province, they find them to be giving the best of satisfaction, and prefer them to the American saws. Accompanying the letter is an order for two saws to be sent to a large British Columbia shingle manufacturer on approval, referring to which Messrs. Heaps & Company say: "We do not think you run much risk, as the shingle saws you have sent us lately are fully equal to, if not better, than the American saws."

In our advertisement pages the Bowmanville Rubber Co. call the attention of mill owners and operators to the merits of their Hercules rubber belting, for which they are able to show the highest testimonials. Our readers will do well to drop a post-card to the company, mentioning THE LUMBERMAN, and asking for further particulars regarding this brand of belting. The Bowmanville Rubber Co. has been lately reorganized, with Mr. E. J. Partridge, of Toronto, as president; Mr. J. B. Martyn, of Bowmanville, vice-president; Mr. J. N. McKendry and Mr. M. W. L. Dingman, of Toronto, business manager and secretary-treasurer respectively. They occupy a three-story brick factory, 140 × 30 feet, with an office 24 × 34 feet, fitted with the latest mechanical appliances for the production of all classes of rubber goods.

The Winnipeg Mining & Smelting Co., of Greenwood, B. C., are developing their property, and have installed a complete mining plant, purchased from the Rossland branch of the Jenckes Machine Co., Sherbrooke, Que. The Jenckes Company report their British Columbia sales as very satisfactory. They are continually shipping to their warehouse in Rossland, where a heavy stock of mining plant is regularly carried.

During the past month the representative of a German lumber firm has been visiting all the prominent mills in Pennsylvania buying up walnut logs for shipment to Germany. His plan has been to inspect and settle for the logs before moving them. Then the ends are painted to prevent quarter-cracking, and as soon as a carload is secured they are sent to the seaboard for shipment.

Nashville, Tennessee, is shipping lumber to the Klondike. John B. Ransome & Co. received an order, through Tacoma parties, for a car of hickory about ten days ago, to go to Dawson City. Last week the same firm, says the Southern Lumberman, received an order for another car of the same stock. It is five, six, and eight-quarter boards, and is to make sled runners. The freight on it to Tacoma is about $50 per thousand, and probably the charges for the remaining three thousand miles of the haul will add another $25. This will make it pretty high-priced hickory f.o.b. Dawson City, but a man can afford a swell "slide" on which to haul gold nuggets.

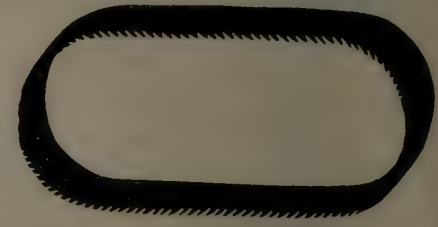
**WHY** BAND SAWS BREAK

SIXTEEN REASONS,
AND HOW TO
AVOID THEM



Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, **ONE DOLLAR.**

## LUMBERING IN BRITISH COLUMBIA.

[BY A SPECIAL CORRESPONDENT.]

LUMBERING on the Pacific coast is a vastly more difficult problem to work out than lumbering in the eastern parts of the Dominion. The absence of snow and hard frosty weather plays its important part in the item of cost of logging; then again, the logs can be bought from the logger as cheaply as a limit holder can take them off his own limits. This seems hard for the eastern lumberman to take in. To put it in other words, the selling value of logs delivered at the mills is the cost of the labor that has been put on them, plus fifty cents per thousand feet timber dues, plus the profit (if any) the logger may have; so that as things have been, and as they are likely to be for a time, the limit holder realizes nothing on his holdings worth the venture.

The local government of British Columbia, who seemingly all along have been selling their berth-right for "a mass of pottage," are to blame to a great extent for this state of affairs, but at the same time the distance from consuming markets and the heavy freight rates regulate the prices that may be netted for forest products. This in turn regulates the price of logs and wages, with the result that a great many men, not satisfied with their lot, are joining in the gold seeking rush to the Yukon country, and the cost of labor is increasing in value on both the Canadian and American sides of the line, while the immediate supply of logs and lumber is less at the present time than has been the case at any previous time since the trade began. All things considered, the lot of the mill-man in British Columbia cannot be called an overly happy one.

Another item that plays its part in the cost of manufacture is the necessity for the operation of dry kilns in connection with every plant. All lumber and shingles shipped, excepting heavy dimension stuff, must be kiln dried, this being done purely to lessen the freight, while the use of a dry kiln always means heavy cost in handling and re-handling stock, besides the cost of the plant and the steady consumption of as much steam in the process of drying as would run a mill of the same capacity in Ontario. Still, in spite of all the difficulties and draw-backs, the Pacific coast lumbermen struggle on with commendable pluck, and whether they are meeting with any great measure of success or not, they surely deserve their share. For several years past none of the mills can claim to have made much money, and a number of large and very expensive plants are still lying idle, the combined capacity of the idle plants being much greater than those in operation. The total capacity of all mills in existence in the province is about 650 million feet of lumber and about 350 million shingles per year. Hopes are entertained by those in the trade that next year will show more encouraging results than any year yet, these hopes being based largely on the prosperous state of the North-West. The volume of trade done shows a steady increase, year by year, but there is room for much more increase in trade before real prosperity can be looked for.

Touching on the woods being manufactured, first in order of commercial importance comes the Douglas fir (Pseudotsuga Douglasii). Our American friends to the south, with their characteristic egotism, call this wood Oregon pine. Eastern Canadians are getting more acquainted with this wood every year, and while it does not and cannot supersede the use of white pine for many purposes, all over Canada it is supplying a want where large and strong dimension timber is called into use. For flooring this wood is particularly well adapted on account of its freedom from knot or defects and tough wearing qualities. Throughout Manitoba and the North-west fir flooring is almost exclusively used, and through the eastern provinces many who are acquainted with the nature of the wood are specifying its use for different purposes. This wood is also exported by water to all points of the world.

Next in order of commercial importance comes red cedar (Thuya Gigantae). Our American friends have the ownership of this wood nailed also, as they call it Washington red cedar. However, red cedar is all right, whether its stump happened to be in British Columbia or in Yankee land. Comparing this wood with Ontario woods in point of usefulness to man, it is about half way between white pine and Ontario cedar, fit for all the purposes for which Ontario cedar is adapted, and used for the same purposes as white pine in some cases, and as door and sash making, shingles, house finish, ceiling, siding, etc. This wood is much softer and takes a bruise easier than white pine, but for non-liability to shrink and swell, and for beauty of natural grain, it leaves pine behind. At present British Columbia mills are shipping red cedar, to some extent, over the whole Dominion.

Lastly, in order of importance, but still a useful wood, is spruce (Picae Englemanni). Our American friends call this wood by a lot of names, and not a little of it is sold in their eastern markets as white pine. It fills a want that neither fir or cedar can. Its main use at present is in box making, the consumption of it in salmon and fruit boxes totalling to a surprisingly heavy quantity. Considerable of it is also shipped in the form of clear squares for turning lumber for piano and organ building, and for refrigerator construction, and it is also manufactured into various finished forms, such as ceiling, siding, etc.

Apart from these three woods no other Pacific coast wood need be mentioned. The province is practically without hardwoods, and where such are required for mechanical uses, they are imported from the eastern parts of Canada. Some experiments have been made in using Australian hardwoods, but without much satisfaction, and where the good old hardwoods of Ontario, such as oak and hickory, are useful in Ontario, they are equally useful in British Columbia.

WISHING YOU

A

PROSPEROUS NEW YEAR

## INVENTOR OF THE BAND-MILL.

WRITING from Charleston, West Virginia, a correspondent of the Chicago Northwestern Lumberman says: The inventor of the band-mill, without which no modern saw-mill is thought to be complete to-day, lives in Charleston, W. Va. This man is J. R. Hoffman, who made the first attempts to produce lumber with a band-saw in Fort Wayne, Ind., in 1868. He did the first work alone, working out his own ideas against the advice and opinion of saw mill men everywhere, who did not believe such a device was practicable. The first band-mill had a 7 foot wheel, and the saw used was 45 feet long, 6 inches wide and 16 gauge. The pulley was built up from an iron center with wooden arms and a wooden rim. The saw for this mill came from France, there being no works in this country at that time that could furnish a saw of this kind. During the Franco-Prussian war the factory from which this saw was obtained was destroyed, and it became necessary to seek another factory. This was finally found in France, and the industry proceeded without further interruption. After putting up 50 or more band-mills in various parts of the country the Hoffman patents began to expire, and Mr. Hoffman abandoned the business to return to that of sawmilling, with which he had been identified for a long term of years.

## A PIONEER CANADIAN LUMBERMAN.

FORTY-FIVE years ago, in the townships of Ancaster and Beverley, not many miles from the future city of Hamilton, saw the beginning of the great lumber firm of Mickle, Dyment & Co., of Barrie, Gravenhurst, Severn Bridge, Thessalon and other places. It was then that Mr. N. Dyment, a bright, enterprising youth of seventeen years, laid the foundation of the large firm of to-day in which he is the chief figure.

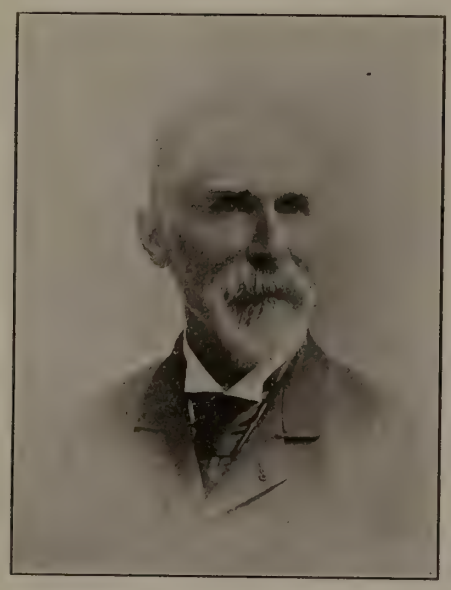
From his earliest years Mr. Dyment was disposed toward a business career. The bustle and activity of the pioneer saw mill, with its possibilities of supplying the lumber demand of a rising country, caught his fancy. His first operation involved one pine tree, which he purchased for a dollar. This dollar he earned by cutting two cords of wood. This first transaction of his long and successful business career he describes with evident pleasure, when recalling the pioneer days of the lumber trade, in which he has been so prominent a figure for twenty-five years past.

In Ancaster and Beverley there were originally rich pine forests, and he soon established a large business and built several other mills on the line of the Great Western Railway. As the country developed the timber became scarce and dearer. Mr. Dyment has seen the time, in that part of the province, when $100 would purchase 100 acres of choice pine. He has also seen the time when the same timber was worth $312 per acre.

About twenty-five years ago, having cut most of the available timber of that country, he extended his operations into Simcoe county, Muskoka, and the North shore, removing his place of residence to Barrie. Here pine was plentiful and cheaper. Many mills were established in the northern country, to be removed to other points from time to time, as the timber supply became exhausted. The mills at Thessalon, however, have been in operation continuously since they were started twenty-five years ago.

The output of the firm has been as high as fifty million feet in one year. Now the average is thirty-five million feet.

Mr. Dyment has always been conceded as one of the best posted men we have on lumber and the lumber trade.



MR. N. DYMENT.

He has been through every stage of the business, from the machinery to the counting room or camp life in the pine woods. A close observer of life, events and business methods, he has a most interesting individuality. One cannot converse with him without acquiring useful knowledge for any walk of life, the fruit of his long and active business experience. His quiet, thoughtful manner and genial disposition renders him an enjoyable companion. The firm employ from 300 to 400 men the year round.

---

The Jacquet river property in New Brunswick, owned by Mr. J. P. Doyle, has been sold to Capt. Geo. R. McDonough, the St. Martins lumberman, and others. The business will be managed by M. A. Ferguson, who has been in the employ of the Prescott Lumber Company.

## LUMBER IN WISCONSIN AND MINNESOTA.

"The Story of a Pine Board" is the title of an article by W. S. Harwood in the November St. Nicholas. Mr. Harwood says of lumbering in Wisconsin and Minnesota :

About 4,160,000,000 feet of logs were cut in the season of 1895—that is to say, what is equivalent to 4,160,000,000 pieces of board twelve inches square and one inch thick. I wonder if even the lumbermen themselves, and the log cutters, and the manufacturers of lumber in the great mills, realize what an enormous amouut of lumber this is. Why, it would build a house around the globe, with a main roof ten foot high and a large attic, ceiling up the inside walls and roof with sweet fragrant pine ; it would put down a matched floor, and then, when the house was all completed, there would be left enough lumber to build tight board fences on either side of the house, three and a half feet high, the whole distance around the globe. Besides all this there would be shingles enough for a good portion of the house; and then, if the mighty builder of such a globe circling house wanted to fit it up a little more neatly, there would be a large supply of laths, and, I suppose the plasterers could furnish him enough stucco and lime.

Or, if he wanted to construct a roof shelter for all the people of the globe, our mighty builder could accommodate them all, allowing to each man, woman and child a clear space of two square feet in which to stand, and still have room left over for five hundred millions of men, with the same room in which to stand. And to look at it in still another way, the same builder would have material to construct a bicycle path of pine a little over two feet wide from the earth to the moon, for there would be nearly 800,000 miles of board a foot wide and an inch thick. In sawing this lumber up into the required length and thickness, there was a great waste of sawdust, so great indeed that the sawdust pile would stand 112 feet high on a city square and 500 feet square at the base, and this is saying nothing about the vast amount of pieces of slabs which are split up into kindling.

This enormous quantity of lumber represents merely the output of two forests, one in the northwestern part of the state of Wisconsin and the other in the northern part of the state of Minnesota, and at the rate the logs are being cut there will not be a piece of forest left standing in all this vast region at the end of ten years, unless something is done by the government to put a stop to the ravages.

---

## CANADIAN CAPITAL IN NEWFOUNDLAND.

Reference was made in THE LUMBERMAN recently to the formation of a company to develop the timber resources of Newfoundland. This company, we are now informed, is composed of Rhodes, Curry & Co., of Amherst, C. P. Pelton, B. B. Barnhill, C. T. Hillson, W. T. Pipes, W. W. Black, Josiah Lusby, J. Avard Black, Thompson Smith, Dr. Smith and G. A. Fowler. The company will at once apply to the Newfoundland Government for incorporation, and the provisional directors will be Hon. W. T. Pipes, N. Curry, William Black, C. T. Hillson and T. W. Smith. There are twelve in the company, two of the others being Messrs. Rhodes and D. B. Barnhill. The name of the company will be the Exploits Lumber Company.

The property acquired is that formerly held by the Exploits Wood Company, an English concern, and consists of 820 square miles, or nearly 560,000 acres, located in the southwestern part of Newfoundland and largely covered with pine. There is also a large quantity of spruce and poplar pulp wood, besides a good deal of white birch suitable for spool-wood. The English company, which has been operating there for a few years, leased a considerable part of the property from private individuals and some from the Government. The new company has acquired the limits under twenty-year leases at $2 per square mile yearly rental, with the option of renewing at the end of twenty years.

The seat of the milling operations will be at the village of Botwoodville, so called from an Espiscopal clergyman who was one of the original lumber company and a founder of the settlement. It lies nine miles from Exploits bay and 260 miles from St. Johns, with which it is connected by rail. The mill is fitted with gang and rotary saws and has a machine shop in connection. There is also a steamer valued at $5,000, which is used in towing lumber down the river. The company expect to manufacture 4,000,000 feet of lumber this season, but when greater facilities have been provided and contemplated improvements secured, the annual output will reach twelve millions, nearly all of which will be sold in the English market. Sixty hands will be employed this season, all natives, the conditions of sale requiring that native labor shall in all cases be employed, except the mechanical portion.

In addition to the property secured, the Exploits Wood Company have the refusal of 350,000 acres more, heavily timbered, and including all the timber worth mentioning on the island. Possession of this will give them a monopoly of the lumber trade and place great possibilities within their reach.

Mr. C. T. Hillson, of Amherst, N.S., is manager of the company. He has lately returned from the scene of operations, and will reside in Amherst until the spring.

---

## ESTABLISHED OVER FIFTY YEARS.

In the year 1840 the late R. Anglin established the lumbering business at Kingston, Ont., now known as S. Anglin & Co. Upon the death of the founder, his son, Mr. J. Anglin, who had been associated with the business for some years, became the senior member. The portrait of this gentleman, now fifty-five years of age, is herewith presented.

The premises occupied by this firm are very conveniently situated on the banks of the Cataraqui river, with ample

MR. J. ANGLIN.

wharfs and a well equipped saw-mill and planing-mill, fitted with the usual saw-mill machinery. The sawdust and refuse of the mill is carried direct to the boiler-room by a number of chutes, keeping the planing factory and the saw-mill free from refuse. The yards, covering about three acres, are well supplied with shed room for finished material, and have good railway shipping facilities, with switch lines from both the Grand Trunk and the Kingston and Pembroke railways. A commodious and nicely finished office building has lately been erected, being isolated from the other buildings as a precaution against fire. The firm have also a large up-town yard and wharf at the foot of Ontario St., adjoining the Kingston Water Works.

Mr. Anglin constantly strives to keep all his equipment up-to-date, and has lately installed one of the largest-sized McGregor, Gourlay & Co.'s stickers to meet the requirements of his increasing trade.

---

## UTILIZING SAWDUST.

The following receipt for utilizing sawdust and shavings is taken from an English exchange :

Take two pounds of pitch and six pounds of resin ; melt over a slow fire, add half a pint of turpentine and mix thoroughly with a quantity of sawdust and shavings. When cold break into pieces to be used for lighting fires, a small piece being all that is necessary to light a fire. In England this method of utilizing sawdust is said to give profitable returns, and might, we think, be adopted by lumber manufacturers in Canada.

---

In recent issues we have presented the facts showing the development of quite a demand for sound, straight-grained hickory with which to build sleighs for transporting passengers and freight through the Yukon country, says the Lumberman's Review. Most of this lumber goes to Tacoma, where the sleighs are built, and several carloads have already been shipped to that point from Tennessee. It is mostly five, six and eight-quarter stock.

# THE DUDE IN THE LUMBER CAMP.

## A Narrative of Facks, by "Josiah the Truthful."

ROUND the lumber shanty fire, one cold and stormy night,
The boys were gathered to enjoy the genial heat and light;
And pipes of sundry shades and strengths were sending forth a cloud,
That filled the place with fragrance blue and nearly hid the crowd.

A rude and wholesome supper had, as usual, closed the day,
And now for these big brawny chaps has come the hour of play;
And the special form of pastime to-night is spinning yarns,
At which the champion, sans dispute, is huge Josiah Barnes.

Josiah had a giant form and a very solemn face,
And told the toughest stories that found utterance in the place;
But he told 'em as the gospel truth, with ne'er a ghost of smile,
As "ackshell facks he'd know'd hisself," and air devoid of guile.

"I guess I never tole you 'bout that dude we had up here,
A-livin' in the shanty as a hand the other year?"
And looking slowly round the crowd he met a general shout
Of negatives, politely backed with cries of "Spit it out!"

"Well," said Josiah the Truthful, "You see His Dandyship,
He came up to the limit that summer fer a trip,
And camped out with a party of other dudes from town,
Jest nigh the river yender, to git their skins done brown.

"You'd see 'em out a-fishin', or bathin'—every one
A-holdin' up their faces and bare arms to the sun;
They on'y had a fortnight, and wanted it to 'pear
They'd bin away a-roughin' it abroad fer 'bout a year.

"Well, in about two weeks or so they all went back agin
Exceptin' this here rooster, a feller small and thin,
With legs jes like two matches and a little red mustache,
A-wearin' a blazer jacket and a belly-band, or sash.

"He took a sort of notion he'd like the shanty work,
And it would be more helthy ner bein' a bank clerk,
So our foreman reely hired him—to let him have his fling—
A-loggin' all the winter and a-drivin' in the spring.

"Fust night he said he liked it, tho' he did feel ruther tired,
But he was bound to stick it through all season now he'd hired;
And yit, tho' he was hungry es a wolf from extry work,
You'd ought to saw him squirmin' at the fat and salty pork!

"He couldn't go it nohow, and the thick merlasses stuff
Was too many fer his feelins,' he sed 'twas "wather wuff,"
So he riz up from the table and went and told the chief,
He'd take some maple syrup, or tenderloin of beef.

"I grieve to state our fellers didn't seem to symperthise
With him, and frequent used to knock his eyeglass off his eyes;
And when that fust night he sot down and lit a cigarette,
Jim Bludso held a pistol, boys, and made him swaller it!

"Our chaps they didn't like his ways—too much of lawdy-daw,
And it made 'em mad and vicious whenever he said 'aw!'
So they done their best to cure him and make him walk aright,
By tossin' him in blankets and so forth every night.

"And then their efforts at reform in day-time didn't slack,
Out in the woods they'd frequent drop a snowball down his back;
Or set him hitchin' up the mules, not mentionin' their tricks,
Which led, es they intended, to a few improvin' kicks.

"Now, thinkin' it all over I'm free to say that Dude
Was treated in a manner that bordered on the rude,
And I can't help a-feeling some pity in my heart
When I remember how he finally—er—sorter—went apart.

"He never was a favorit around the lumber camp
Es you kin guess from wot I've said—too much of "swagger" stamp;
But then agin the luck he had, jes' like hisself, was slim,
And I am reely sorry fer—wot is left of him.

"He's livin' in the city now, or leastwise his remains
Resides down there quite healthy, his body, head and brains—
The rest of him is scattered round the limit more or less,
Tho' they've got a portion of him at the hospertal, I guess.

"The fust slight break he made wus when he went to cut a tree
And let the ax slip somehow and chopped a foot off, see?
And as he lay a-groanin' he didn't lay quite clear,
And another bit of timber fell and kinder took an ear.

"Yet still he didn't leave us, he certainly had grit,
But about a fortnight later his skull got somewhat split;
I can't tell how it happen'd fer the facks got mixed, you know,
With his losin' of the other leg by an accidental blow.

"And yet he stayed on with us and seemed to gain and thrive,
Till in the spring we started down the river with the drive,
But when we struck the rapids the logs jammed, as they will,
And he got both arms a-mangled in the mix-up and the spill.

'They took him to the city where them arms wus amputated,
And subsequent he lost an eye—or so I've heerd it stated.
There's nothin' left to tell about, so I will close right here
By statin' thet he hain't a dude no more sense that same year."

—J. W. BENGOUGH.

# EXPORT OF SAW-LOGS.

## Future Ontario Licenses will Provide for the Manufacture of the Timber in Canada.

On Monday, December 20th, the Ontario government submitted the timber bill to the House. This bill, in brief, provides that Ontario saw-logs shall in future be manufactured within the borders of the Dominion, a provision which will meet with the hearty approval of lumbermen and Canadians in general. Hon. Mr. Gibson, Commissioner of Crown Lands, introduced the measure, and accompanied it with a somewhat lengthy statement of the situation. It is entitled "An Act Respecting the Manufacture of Pine Cut on the Crown Domain," and reads as follows :

THE TIMBER BILL.

1. All sales of pine timber limits or berths by the Commissioner of Crown Lands which shall be hereafter made, and all licenses or permits to cut pine timber granted by the Commissioner, shall be so made or granted subject to the condition set out in the first regulation of schedule A of this Act, and it shall be sufficient if such condition be cited or mentioned as 'The Manufacturing Condition' in all notices, licenses, and permits or agreements or other writing.

2. The regulations set out in schedule A to this Act are hereby approved.

3. The Lieutenant-Governor-in-Council may make any further or additional regulations necessary to enable the Commissioner of Crown Lands to carry into effect the object and intent of the regulations contained in schedule A.

4. This Act shall come into force on the 29th day of April, 1898.

SCHEDULE A.

1. Every license or permit to cut pine timber on the ungranted lands of the Crown, or to cut pine timber reserved to the Crown on lands located, sold, granted, patented, or leased by the Crown, which shall be issued on or after the 30th day of April, 1898, shall contain and be subject to the condition that all pine which may be cut into logs or otherwise under the authority or permission of such license or permit shall, except as hereinafter provided, be manufactured into sawn lumber in Canada, that is to say, into boards, deal, joists, lath, shingles, or other sawn lumber, or into waney board or square or other timber, in Canada ; and such condition shall be kept and observed by the holder or holders of any such license or permit who shall cut, or cause to be cut, pine trees or timber under the authority thereof, and by any other person or persons who shall cut or cause to be cut any of such pine trees or timber under the authority thereof, and all pine so cut into logs or otherwise shall be manufactured in Canada as aforesaid.

2. Should any holder of a timber license or permit, or any servant or agent of such holder, or any person acting for him, or under his authority or permission, violate or refuse to keep and observe the condition mentioned in the preceding regulation, then, and in such case, the license or permit to cut pine timber on the berth, territory, lot, or lots included in the license or permit, and on which or any part of which the pine was cut, and in respect of which or any part of which there was a breach of such regulation or a refusal to observe or keep the same, shall be suspended and held in abeyance, and shall not be re-issued, nor shall a new license issue, unless and until so directed by the Lieutenant-Governor-in-Council, and then only upon such terms and conditions as the Lieutenant-Governor-in-Council may impose.

The Commissioner of Crown Lands, his officers, servants, and agents, may do all things necessary to prevent a breach of the aforesaid condition or regulation, and to secure compliance therewith, and may, for such purpose, take, seize, hold, and detain all logs so cut as aforesaid, and which it is made to appear to the Commissioner of Crown Lands it is not the intention of the license, owner, or holder, or person in possession of, to manufacture or cause to be manufactured as aforesaid in Canada, or to dispose of to others who will have the same manufactured in Canada, until security shall be given to her Majesty satisfactory to the Commissioner that the said condition will be kept and observed, and that such logs will be manufactured in Canada as aforesaid ; and in the event of refusal on the part of the licensee, owner, or holder, or person in possession of such logs, to give such security within four weeks after notice of such seizure and demand of security by, or on behalf of the Commissioner, then the Commissioner may sell or cause to be sold such logs by public auction, after due advertisement, to some person or persons who will give such security to Her Majesty as the Commissioner may require that such logs shall be manufactured in Canada. The proceeds of such logs shall, after such sale, and after deducting all expenses of such seizure and sale, and any sum due and owing to Her Majesty for or in respect of any timber dues, trespass dues, ground rent, or on account of the purchase of any timber or timber berths by the owner, licensee, or holder of a permit, or other person who has cut or caused to be cut such logs, or who is the owner or holder of the same, be paid over to the person entitled to the same.

4. Provided, nevertheless, that nothing in the preceding regulations which requires pine logs or timber to be manufactured in Canada as aforesaid shall apply to logs or timber cut and in use in Canada for any purpose for which logs or timber in the unmanufactured state are or may be used.

5. Provided, further, that these regulations shall not apply to the east half of the township of Aweres, in the district of Algoma, containing 18½ square miles, nor to 22 square miles in the district of Thunder Bay, composed of berths 2, 3 and 4 of the timber sale of 1890.

6. The foregoing regulations shall not come into force unless and until they shall be approved by an Act of the Legislature.

MR. GIBSON'S SPEECH.

In introducing the bill, Mr. Gibson referred to the fact that not until recent years had the question of the exportation of saw-logs from the Georgian Bay called for special consideration. He submitted the following statement, compiled from the trade and navigation returns of the Dominion, showing how far these particular exports have been going on from Ontario from the year 1880 down to the end of last year :

| Year. | Feet. | Value. |
|---|---|---|
| 1880 | 72,000 | $ 784 |
| 1881 | 2,020,000 | 13,298 |
| 1882 | 2,632,000 | 20,208 |
| 1883 | 1,243,000 | 13,323 |
| 1884 | 1,641,000 | 11,397 |
| 1885 | 964,000 | 7,906 |
| 1886 | 378,000 | 2,284 |
| 1887 | 2,864,000 | 24,429 |
| 1888 | 6,349,000 | 49,000 |
| 1889 | 383,000 | 3,270 |
| 1890 | 10,834,000 | 94,254 |
| 1891 | 32,116,000 | 261,479 |
| 1892 | 36,699,000 | 313,281 |
| 1893 | 73,887,000 | 651,122 |
| 1894 | 125,837,000 | 1,050,550 |
| 1895 | 277,837,000 | 2,359,278 |
| 1896 | 211,745,000 | 1,859,369 |
| Total | 787,481,000 | |

Mr. Gibson pointed out that during the past 30 years the Dominion government had taken the following steps in connection with an export duty on saw-logs : The Canadian parliament in 1866 fixed an export duty on saw-logs of $1 per thousand feet board measure. That remained the law of the land for about twenty years. In 1886 the Dominion parliament increased the export duty to $2 per 1,000 feet, and by the same measure the Dominion government were authorized by order-in-council to increase it to $3 per thousand if thought expedient. Then in 1888 the Dominion government were authorized by the Dominion parliament, whenever it was deemed to be advisable in the public interests, to reduce or remove the export duty on saw-logs. On Nov. 13, 1888, under the Act of 1888, the export duty was increased to $3 per thousand feet board measure. Then again in 1889, by order-in-council, the duty was reduced to $2 per thousand feet board measure, and on Nov. 11, 1890, a further order-in-council was passed entirely removing the export duty.

It was always considered, Mr. Gibson said, that there was more money for the country in a free export of lumber or manufactured timber from this country into the United States than there would be by the imposition of any duty upon the export of the unmanufactured material. That seems to have been the view by which the parliament of Canada and the Dominion government had been actuated, and he had no doubt that that was the correct view so far as this country was concerned, in realizing on the products of our forests, whether they be pine timber, cedar, tamarack, or any other variety of our timber resources.

The position remained as above described until a recent date, when the Dingley bill was passed by the American Congress, imposing a duty of $2 per thousand upon lumber going into the United States from this country. That was, of course, a reversal of the policy of the previous Administration, and naturally a very important change in policy. But the feature of the legislation which has caused the trouble was the retaliatory clause, the effect of which was that while our mills, or lumbermen, after manufacturing their logs into lumber and taking that lumber to the American market, are charged $2 per thousand, the Michigan lumbermen who tow the logs over to the American side and manufacture them into lumber in their mills there have an absolute advantage of $2 per M over their Canadian competitors.

Referring to the cost of sawing logs, Mr. Gibson said : "It is urged that the main part of the industry is in the sawing of logs. That is not the case. Since taking charge of my department, the duties of which have necessarily brought me into contact with these questions, I have been surprised to find how small the proportion of the labor engaged in the conversion of saw-logs into lumber was to the whole cost of the production of lumber, from the cutting of the material as it stands in the tree. I have here a calculation showing pretty conclusively that four-fifths of the total cost of labor is expended in the cutting of the trees in the woods, piling them, hauling them out to the streams, running them down the streams to the lake, and putting them into rafts for towing. I have a statement from a lumberman of great experience, one whose testimony on such matters would, I am sure, not be gainsaid for a moment in this House, as to the actual cost of milling. It is as follows :

Cost of sawing lumber at Peter's mill, including repairs, breakages, breakdowns, oil, fitting up in the spring, labor, and everything else—17,000,000 feet being shipped—$1.14½ per M.

Cost of shipping, freight and loading on ship, $1.12½ per M., the shippers themselves loading it from the front rows of piles.

In years when we did the loading ourselves the entire cost was about 17 cents per M. So that the moving of the rear piles to the front would be from 8 cents to 10 cents, or in all :

| | |
|---|---|
| Sawing | $1.14½ |
| Loading (if all done) | 17 |
| | $1.31½ |
| If, in loading, the shippers as part of freight load the front piles, the moving to the front would not cost more than 10 cents, thus, deducting from above | 7 |
| | $1.24½ |
| If freight is per Canadian vessels, then there is to be added freight | 1.12½ |
| | $2.37 |

The speaker then referred to the fact that the Michigan lumbermen themselves, who were

dependent upon Canada for their raw material, had assisted in bringing about the condition of affairs now existing. The rights of limit holders were then dealt with. It was admitted by a large majority that it would have been unfair on the part of the government to apply the manufacturing clause to licenses that are current at the present time. Moreover, the government had to consider what would be the effect of such a course upon the interests of those who have been in the habit every winter of receiving employment in connection with the lumbering operations on the Georgian Bay limits. Had these conditions been imposed, practically no logs would have been taken out during the present winter, and that would have meant almost starvation to large numbers of settlers in the communities who live in the neighborhood of these lumbering regions and who depend from year to year upon the work they themselves and their teams are able to get during the winter's lumbering operations. There had been changes on previous occasions during the existence of licenses, but they had not been so serious in nature as the present one. The government had raised the Crown dues on logs from 75 cents to $1 per thousand feet, and increased the ground rent from $2 to $3 per square mile. Every limit that was sold from time to time now was sold on the distinct and thorough understanding that the dues might be increased. But for reasons which he had stated, the government had felt that it would be a confiscation to have interfered with the operations of lumbermen under licenses existing during the present year.

Mr. Gibson then compared the position of the Georgian Bay and Ottawa lumbermen. The latter were nearer the eastern market, and were in a position to pay the two-dollar duty. They were therefore opposed to anything that would have the appearance of retaliation. Other arguments against the manufacturing clause were that it would depreciate the value of Canadian limits, and would prejudicially effect Canadian capital, seeing that the limits held by Americans were largely carried by Canadian banks; also that it would lead to the suspension of the operations of Americans in this province, thereby throwing a great many men out of work, and causing a stoppage of the expenditure heretofore made for teaming and supplies. All these considerations had to be carefully considered by the government, but while no doubt there were risks to be run, the government concluded that the objects to be gained, viz., the preservation of our timber supply, the decreased annual cuttings, and the home manufacture, were worth the risk.

Mr. Gibson, in conclusion, stated that the new regulations might serve the useful purpose of ultimately leading to the adoption of some practical forestry scheme whereby the amount of the timber cut each year might be controlled.

Mr. Whitney, leader of the Opposition, asked if the intention was that all licenses hereafter renewed will contain provisions compelling the sawing of the logs in Canada, but that they will not be interfered with during the present year. He was given a reply in the affirmative.

Mr. Reid inquired regarding the restriction of the present winter's cut.

Mr. Gibson replied that, from information received of the probable cut, they had not thought it necessary to impose any restrictions.

## INTERVIEW WITH THE ATTORNEY-GENERAL.

A DEPUTATION of Canadian lumbermen waited upon the members of the Ontario Cabinet on Friday, December 10th, and renewed their request that such measures be adopted as would compel the manufacture of saw-logs in Canada. The chief speakers were Messrs. James Scott, John Waldie, John Bertram and E. W. Rathbun, comprising the committee appointed at the previous meetings of lumbermen in Toronto to wait upon the government.

Ald. Scott gave the following reasons why all new licenses issued after April 30th, 1898, should contain a regulation that all timber cut on the Crown lands of Ontario shall be sawn, made into square timber or otherwise manufactured in Canada:

(1) The retaliatory clause of the Dingley bill passed by the United States has made it difficult for the Dominion government, without grave hardship and dislocation of trade being threatened, to place an export duty on saw-logs.

(2) Under present conditions of free logs for export and a duty of $2 per thousand feet, sawing on the Georgian Bay for the American market could not be continued; the business of sawing lumber would, of necessity, be transferred to Michigan.

(3) This would effect not only Canadian operators, but also Americans who have established their saw mills in Ontario, and who are certainly entitled to consideration.

(4) It would be a ruinous policy to provide the raw material free from our forests for competition against our own mills, who would be handicapped by the $2 duty.

(5) If the exportation of logs cut on Crown lands was entirely stopped, Canadian lumbermen would enter no complaint of the $2 duty, considering it entirely a matter under the jurisdiction of the United States.

(6) While fully recognizing the rights of proprietorship, both of Canadians and Americans, in all licenses issued by the Crown, we consider the retaliatory clause an interference with our rights, and as Americans have induced the situation, it is for them to apply the remedy.

(7) What Canadian lumbermen want is simply equality and fair play in the work of utilizing the product of their own forests.

(8) If a duty of $2 is charged on lumber entering the United States, then an equal export duty should be charged on logs.

(9) Until the privileges contemplated by clause 7 be enjoyed, the only remedy is to prohibit the export of logs cut on Crown lands, and place American stumpage owners on the same footing as Canadians.

(10) Whenever, therefore, an equalization of conditions is brought about the embargo placed on the export of logs should be taken off.

This statement was signed by Messrs. J. Scott; Huntsville Lumber Co., N. Turnbull, sec'ty.; E. W. Rathbun, Wm. Irwin, John Bertram, Thos. M. Sheppard, Imperial Lumber Co., C. D. Waren, president; J. & T. Conlon, James Playfair, W. J. Sheppard, Chew Bros., Burton Bros. and J. S. Playfair, on behalf of the deputation.

Ald. Scott supplemented the statement with a few observations. He said that the lumbermen of the province had not changed their views in regard to the matter, and did not take back nor modify anything that they had said on former occasions. He stated that he had never taken the position that Canadians were not willing to trade with the Americans under a free exchange of forest products. He did not think the lumbermen of the country took the view that under no circumstances should the export of logs be permitted.

Mr. Gibson: The Government are being told every day that every log should be manufactured in the country.

Ald. Scott replied that he did not think the former deputations had urged that there should be no exception to the rule.

Mr. John Bertram favored a policy that would secure the free entry of all our products into the United States. There was a large quantity of timber other than pine, such as spruce, hemlock and cedar, standing on the lands which had been sold, the cutting of which into ties, posts and other articles would give work to Canadians. If free entry into the United States market could be secured for this, great advantage would result to this country. The utilization of the coarse products of the forest with free entry into the United States would be worth more to the country than all the logs that Americans had purchased.

Mr. E. W. Rathbun thought the recommendation of very mild form. It was not a question of how much standing timber we had, but of the quantity of white pine and spruce there was in the United States which could be put in a marketable form to compete with similar kinds of Canadian timber on the markets of the world. Accepting the statements of authorities in the United States and in the Old World, the supply from both sources was very limited. Therefore the important question for us to decide, bearing in mind our own resources, and the resources of our competitors, the industries that the forests would sustain, and the demands of foreign markets for the products of these forests, was whether we were not justified in taking the position that Ontario timber should be manufactured within our own borders. He approved of the principle of not restricting the sale of timber limits, and not excluding anyone who would bring capital into the country, but he believed that if the whole of the timber was required to be manufactured here, capitalists and enterprising men would be attracted to Canada from the United States to a greater extent than ever before.

Mr. Hardy: The Michigan lumbermen are very powerful in their own state. Does it occur to you, Mr. Rathbun, that the Michigan Legislature might throw obstacles in the way of Canadian trade, in connection with railway traffic, etc.?

Mr. Rathbun replied that these things should be considered. He was strongly opposed to retaliation, but did not anticipate any danger from restrictions such as Mr. Hardy mentioned.

Mr. Hardy asked if any estimate had been made of the quantity of lumber cut by small local mills.

Mr. Rathbun could give no accurate figures. He admitted that the smaller mills were too apt to be lost sight of. Pine was not everything. Our cedar, hardwoods, spruce, etc., were more and more wanted in the markets of the world. The demand for box shooks and similar stock was rapidly increasing. Replying to a question by Mr. Hardy, he stated that he did not think there would be any slump in the value of timber limits by compelling timber to be manufactured in this country.

Mr. Waldie followed, also touching upon the bonding question. He was strongly in favor of compelling the manufacture of saw-logs in Canada, and gave the following reasons therefor:

1st. As I believe it is the only name by which we can retain any portion of the business of sawing lumber in the Georgian Bay, and prevent the depopulation of our towns in that district.

2nd. It is the only available means that will tell as a factor if Michigan mill men desire to influence legislation at Washington. The lumbermen of Canada having already asked the Dominion government to take power to put an export duty on logs, and that power not being exercised, has prejudiced the position of Michigan men at Washington, who ask that the agreement covering the $1 duty on lumber and free logs between the two countries should be restored. I firmly believe that an absolute restrictive condition should be inserted in all the licenses that will be issued on the 30th of April next, and to prevent if possible the impression that has by some means gained a footing in the United States, that Canada will do nothing to retain the manufacture of the logs within the Dominion.

3rd. If the Georgian Bay is to obtain a fair share of the export trade to England, it must be by increasing the manufacture at certain points, so that a sufficient quantity can be supplied by the foreign trade in competition with such points as Albany, Tonawanda and Saginaw. What the English buyer requires is to get a large quantity of a certain class of lumber at one point; and this condition not only applies to the lumber trade, but to all other manufacturing industries in Ontario which are looking to an export market for their products.

Some remarks by Mr. Loughrin, M.P., brought up the question of the utilization of the coarse forest products. Mr. Rathbun held that a greater manipulation of the coarse timber should be encouraged in this country. There was a wide market in England for box shooks.

Mr. Hardy: How much lumber could Great Britain use for box shooks?

Mr. Rathbun: All we can manufacture in Canada from cull lumber.

The question of an import duty on lumber was then raised. Mr. Ross asked: Is it a fact that coarse lumber manufactured in Michigan mills from Canadian logs is being shipped into Canada, competing with Canadian lumber.

Mr. Waldie replied that it was a fact. This lumber was being brought into Sarnia, Windsor, Chatham, London, Hamilton and Toronto. He believed from twenty to thirty million feet were imported annually.

Upon being asked, Mr. R. Laidlaw, of Toronto, stated that this year he had brought to Sarnia from Duluth some 4,000,000 feet.

Mr. Hardy said he had noticed that Manitoba took 14,000,000 feet of lumber. What was the duty, he enquired.

Mr. Bertram: None.

Mr. Hardy: Would it be practicable to put a duty on in Ontario and the eastern provinces, and not in Manitoba?

Mr. Bertram replied that it would not. Any duty imposed would have to apply to the whole of Canada. He pointed out that the mill owners in Northwestern Ontario who sold their output in Manitoba, would at once request the same protection for that province as was given Ontario.

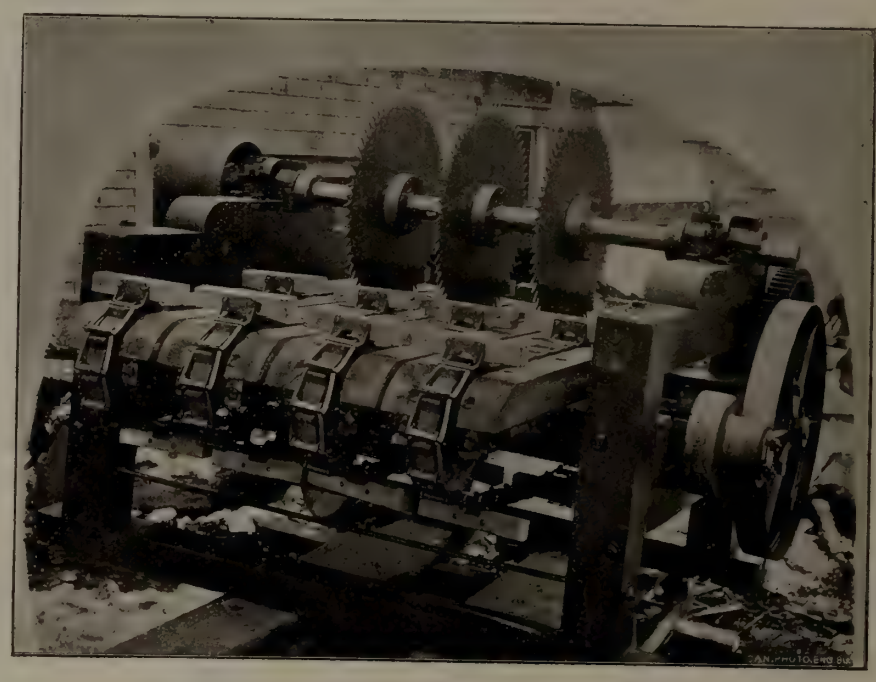
Mr. Waldie said that the Georgian Bay mills could supply the Manitoba market if the C.P.R. would give reasonable rates, but they could not be induced to do so.

## MACHINE FOR CUTTING SLABS AND EDGINGS INTO FIREWOOD.

MANY lumber manufacturers have experienced considerable inconvenience in disposing of their lath edgings and slabs, owing to the difficulty in getting the material to the furnaces to be burned. This induced Mr. Kilgour Shives, of Campbellton, N.B., to design a machine for cutting slabs and edgings into firewood. This machine, of which an illustration is presented herewith, is said to give exceedingly good results. Referring to its construction, Mr. Shives writes as follows :

"This machine was built to cut 4-foot slabs or edgings into 16-inch or 12-inch lengths, as may be desired. It is a strong, heavy, substantial machine, built to do very heavy work and stand lots of rough usage. It is a self-contained machine, requiring only one belt to drive from shaft, the feed being driven by a small belt from end of arbors. The arbor is of 3-inch steel, and the driving pulley 12-inch diameter and 9-inch face. The saws are 30 inches diameter, and make 1,350 revolutions per minute. The chains that carry the wood through the saws and the sprockets are very heavy for the work, No. 85 Ewart chain and $F^2$ attachments being used. The saws, being on the arbor above the table, do not break as they frequently do when the saw arbor is placed under the table, and there is no danger of the operator being injured by pieces of wood flying towards him, as is the case when the arbor is placed under the table."

Mr. Shives is prepared to build these machines for any persons desiring same, and will be pleased to give further particulars and quote prices upon application.



MACHINE FOR CUTTING SLABS AND EDGINGS INTO FIREWOOD.

## A DOUBLE-ACTING BAND SAW.

THE idea of utilizing a band saw so that a board will be taken off from the log at both the forward and backward movement of the carriage is not entirely new, although it has not been heretofore considered practicable. Now a Minneapolis firm claim to have attained success. They took an old discarded band saw and cut teeth on the smooth side. The double-acting band saw was then swung over the wheels of the Allis band on the "long side" and put in operation. At first the men on the carriage were a little slow in getting onto their job. It made them hustle to have to set the logs over at both ends of the track, but when they got used to it very little time was lost, excepting, of course, that the carriage would not return as fast with the saw cutting its way through the log as it would be in the old way doing no sawing at all.

The experiment was declared satisfactory, and next year the firm hope to be able to increase their output by 75 per cent. All the changes that will have to be made in the mill will be to move the sawyer's lever back a little to permit of the live rolls being extended between the two sides of the band saw, and along in front of the log deck for a distance of about 14 feet, in order to bring back the board sawed off on the return of the carriage. The live rolls will have to be extended to this distance. The reason why this method of sawing has not been successful heretofore is the fact that it was not possible to keep the saw on the wheels. In other words, the tension was not strong enough at the right point. While sawing in the ordinary way, the large wheels of the band saw are tilted toward the log, and the saw is rolled a little shorter on the teeth side in order to hold the saw to the wheels. Now, with the log coming against both sides of the saw, it will be necessary for the wheels to be placed perfectly straight, but the face of the wheel will have to be made convex, and the saw will have to be so rolled that it will be longer in the centre, and shorter and having greater tension on the teeth sides. This will hold the saw to the wheels, no matter which way the pressure of the log is against the saw.

## SECOND-HAND MACHINERY.

FROM various causes, such as death of proprietor, insolvency, fires, dissolution of partnership, etc., there is always a large amount of second-hand machinery for sale all over the country. The objective "second-hand," when applied to machinery, takes from it whatever of distinctive price may have attached to it when new. The further description that it is "as good as new" adds but little to its value, and if one has been used only a day, a week, a month, or a year, no wear may be perceptible, but it is logically true that much of its life and usefulness is spent.

There is perhaps more second-hand saw mill, wood-working and cooperage machinery for sale now than at any previous time. The improved prospects in the lumber, cooperage and wood-working trades are also creating a larger demand for it.

Very many widows and orphans have the most part of their inheritances left them in the form of machinery plants, either as whole or part owners. Where the surviving parties are competent to carry on the business successfully, and are honest, the widow and the orphans may secure an income. But at best the widow owner of stock in a machinery plant is at a disadvantage, and nine times out of ten it is better that she sell out and put her means where she can control it. Where a widow, suddenly bereft of her husband, is left a saw or planing mill or other machinery plant as sole owner, she will find it about the most unsatisfactory of all species of property. She cannot operate it herself, and it is next to impossible to find anyone else who can or will operate it successfully, or who will take proper care of it. The remedy in such a case is to sell the plant as soon as possible. Of course, there are some widows who can and do operate the plants their husbands left them with fair success, but their number is but one out of two thousand. We can call to mind only two or three in all the southern states.

A large proportion of the idle second-hand wood-working machinery is the result of financial embarrassments. It generally falls into the hands of bankers or capitalists who advanced money to the original operator. As a rule the banker or the capitalist will hold on to the machinery in the hope of getting at least a large per cent. of his money back, until it so deteriorates that it becomes a question whether he can sell it at all. The writer has in mind one wood-working plant, consisting of a saw mill, planing mill and attachments for producing all sorts of finished wood-work for the wholesale or retail trade, said to have cost originally $25,000, that fell into the hands of a banking firm early in 1893, and has been held awaiting a purchaser since. No effort was made to advertise the plant for sale, as the bank officials felt confident that the plant would bring the small sum of $5,000 or $6,000 that had been advanced upon it. After four years of idleness the machinery has deteriorated greatly in value, the cost of a watchman and insurance has enlarged their claims against the plant, and now they are looking for someone to take the entire plant off their hands at $2,000. As a rule, machinery that has been run for any length of time deteriorates more rapidly in value by standing idle than it would under constant operation in careful hands.

It is not difficult to sell a small saw mill plant to a neighbor for a fair price on good terms, because in every locality there is always someone anxious to embark in the lumber manufacturing business, and generally the less he knows of the business the more enthusiastic he is on the subject. But for large plants buyers are few, and their views on prices, if based on experience, are very low. Parties finding themselves with a large amount of second-hand machinery on their hands as assets to be realized on should lose no time in seeking a purchaser. If there is not one in the neighborhood able and willing to buy it at a fair price, and the owner has no acquaintance or but a limited acquaintance with people engaged in the trade for which his second-hand machinery is suitable, he should immediately proceed to cultivate their acquaintance. This can be done by a judicious advertisement in the trade papers that represent the interests that use the class of machinery to be sold. Pick out the right sort of an advertising medium and go in to win. Remember that while there is a fixed price on all standard new machinery, there is none on it at second-hand. It is worth only what it will bring. The more bidders the better offers will be had.—The Tradesman.

J. Woodruff is building a saw mill at Sydenham, Ont.

## MR. GEORGE McKEAN.

THE shipping and lumbering reports of the North Atlantic coast bear the names of men who have achieved a success unrivalled in other branches, and who have been among the most important factors of our commercial and industrial progress. The subject of the present sketch, Mr. Geo. McKean, of St. John, N.B., is one of the three or four shippers who take undoubted precedence in the exportation of lumber from the Maritime Provinces to the markets of Great Britain.

Mr. McKean was born in Newry, Ireland, in the year 1841. As he grew to manhood he became interested in the lumber trade, and in 1867 came to St. John as the representative of Francis Carvell & Co., of Liverpool and Newry, who were at that time heavy importers. He afterwards became a member of the firm and continued with them until early in the eighties, when they ceased business. Mr. McKean then became identified with the large firm of Jas. Smith & Co., acting as their agent, and about the first of the present decade launched into the shipping business for himself. He is now the representative of the large importing firm of Liverpool, Price & Pierce.

Mr. McKean's shipments from St. John for the years 1890 to 1895, averaged over twenty million feet annually. For the past two years they have not been so large from that port, but his St. John shipments are small in comparison with those from other ports in New Brunswick and Nova Scotia. From Parrsboro alone, a small shipping town in the latter province, he has shipped between twenty and twenty-five million feet in one year. He has been doing business there since 1885, through his well-known agent, Capt. Norby. He also ships largely from Grindstone Island, Baie Verte, Shediac, Pugwash and other points in their vicinity.

Mr. McKean deals exclusively with the European markets; his vessels are all transatlantic, and are chartered sometimes to the extent of 60 and 70 in a year.

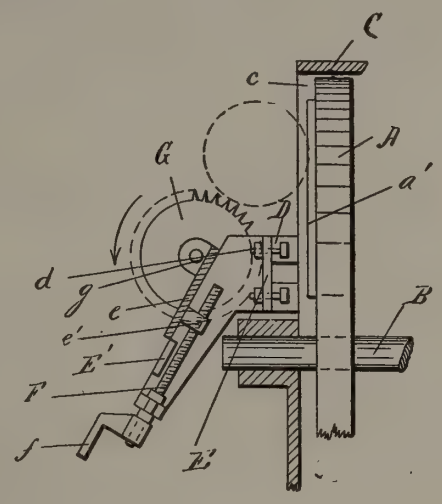
In April, 1854, Mr. McKean married a daughter of the late P. P. McGivern, of St. John. They have a residence on Sewall Street and a beautiful summer home at Rothsay. Though never courting publicity in personal matters, Mr. McKean is always considerate to those calling upon him. He is extremely popular in business circles, and is frequently spoken of as a perfect business man.

## THE SAND BLAST FOR SHARPENING FILES.

J. J. Holtzapffel, in a paper recently read before the Society of Arts on the uses of the sand blast, alluded especially to the value of the process in sharpening files and the superiority of the process, the sand blasted file doing twice the work of the ordinary file in the same time, this superiority being now so fully recognized that 240,000 dozen files are so prepared in Sheffield yearly. They can also when worn be resharpened over and over again, without grinding out the old marks, for about 2½ per cent. of their value. He also spoke of the efficacy of the blast in removing every trace of scale from iron castings so that the finest tools may be applied at once to the metal, and of its usefulnes in refacing grindstones and emery wheels, cleansing bicycle tube surface before brazing, granulating or frosting electric plate, gilding metals, gold and silversmith's work, and jewelry, and many other purposes suggestive of a widely extended field for the sand blast in metallurgy.

## RECENT PATENTS OF INTEREST TO LUMBERMEN.

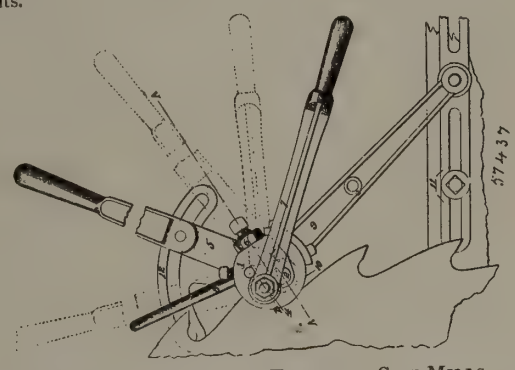
PATENTS have recently been granted in Canada for the following devices, which will be found of interest to lumbermen and woodworkers :



BARK CUTTER.

Patentee : S. W. Butterfield, Three Rivers, Que. ; granted September 4th, 1897 ; 6 years.

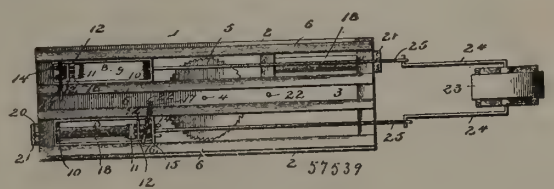
The claim is for a bark cutter, the combination, with a revoluble disc provided with knives on its face, and a casing provided with an opening at its upper part, of a carriage secured to the front end of said casing, and provided with an inclined support, a bracket slidable on the said support, toothed wheels journalled in the said bracket and arranged to support the logs in front of the cutters, and driving mechanism for revolving the said wheels. The slidable bracket carries the shaft and wheels, being supported by the carriage. The driving pulley is carried by the said carriage, which pulley drives the shaft and intergearing bevelled toothed wheels, with an intermediate shaft, and universal joints coupling the adjacent ends of the two shafts.



SWAGE FOR UPSETTING TEETH OF SAW-MILLS.

Patentee : J. H. Steedman and G. F. Steedman, St. Louis, U.S.; granted 16th September, 1897 ; 6 years.

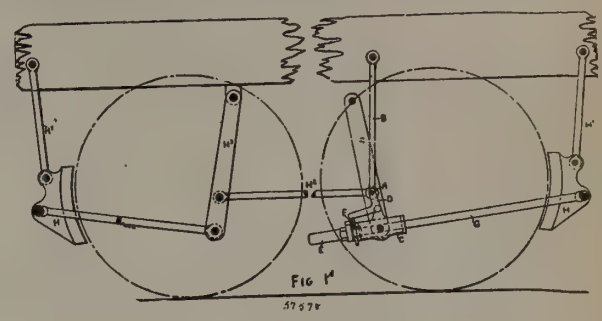
The claim therefor consists in a saw swage wherein the saw tooth is swaged by the rotation of an eccentric die, swaging out the tooth against an anvil the combination of the head 1, having slot 10, the eccentric die 2, the cylindrical anvil 3, clamping screws 4, the lever 5, set screw 6, the clamping lever 7, the adjusting stop 8, the arm 9, the adjustable slide 11, and the adjustable arc 12.



CLAPBOARD MACHINE.

Patentee : Patrick Conroy and Jere Neterer, of New Whatcom, U.S.; granted 22nd September, 1897 ; 6 years.

This clapboard machine consists in a reciprocating bolt-carrier, consisting of an open rectangular frame having inwardly-projecting teeth on one end of its walls, and a flange extending from side to side in advance of the other end wall and parallel therewith, a toothed dog arranged in front of the flange and having a stem projecting inwardly through the flange, and the end wall of the carrier, a spring on the stem abutting against the end wall and tending normally to force the dog forward, an arm extending rearwardly from the dog through the flange and bent upwardly, a lever pivoted at one end to one side of the carrier and connected intermediate at its ends with the said arm, and a fixed stop on the machine-frame to engage the free end of the lever and cause it to retract the dog. In a tilting table provided with central end journals, one being supported in end of machine-frame and projecting outwardly beyond it, and the other in a suitable bearing within the frame, a segmental rack 21 secured to the outer face of the said end bar concentric with the projecting journal, with a spring arm to rock the table and lock it in its adjusted position, combined with a reciprocating bolt-carrier and means to release the bolt from the carrier to permit it to drop onto the table.



LOG PEELING MACHINE.

Patentee : John Moravec, Chatham, N.B., granted 25th September, 1897 ; 6 years.

The points claimed by the patentee are the combination, with a bed, a head stock and tail stock mounted on said bed, and a chuck, of a hollow live-spindle carried by the head-stock and arranged to operate the chuck, a plurality of centre-points carried by the tail stock, a slide rest, a tool pivotally mounted on the slide, rest and means for keeping the tool at a uniform distance from the periphery of the log. In a means for holding and revolving the log, of a tool-holder, a pair of knives placed in said tool-holder, one knife being arranged to cut at right angles to the other, and means for holding the knives in a predetermined relation to the periphery of the log, whereby one knife rips the periphery of the log and the other knife cuts a strip therefrom. In a bed having channelled extensions, of a slide-rest provided with brackets, and a series of balls running in the channelled extensions and supporting the brackets, and a hollow cylinder forming a life-spindle mounted in uprights and rotatable on the balls.

## TIMBER IN THE KLONDIKE.

The following interesting letter on the timber resources of the Klondike region is from the pen of Mrs. Alice Palmer Henderson, and appeared in a recent number of the Timberman.

If sawdust is gold dust, why dig in the mines? Why not live in town, even if it is the wickedest town on earth—Dawson, the river metropolis for the Klondike, fourteen miles back in the mountains? It is safe to assert that Harper & Ladue, owners of that saw-mill, haven't a more profitable gold mine than that same little engine, working away 20 hours out of 24 under the shed roof. It was netting them about $1,000 a day when I was there in August and must be making much more now, for lumber prices are much advanced, I hear, and the mill is run the other four hours. This is the same mill that was erected at Forty-mile, the first on the Yukon, but was removed when the rush to the Klondike began a year ago. When I was at Dawson they were working two shifts ten hours each and couldn't get enough logs for the rest of the day. They averaged 7,000 to 8,000 feet cut a day and employed seventeen men. The engineer and sawyers received $15 a day, the others $10. One of the sawdust haulers is an ex-mayor of Seattle. The firm is obliged to pay $3 a thousand tax to the government. When I was there they were paying $50 a thousand for logs and charging $150 for the sawed lumber and as much for slabs, but some months before they were receiving the modest sum of $750 a thousand.

The only other saw-mill in the Yukon Valley is at Anrik, where one is owned by the Episcopal mission and leased by the year.

Several new saw mills will doubtless go in next season. They are needed now, and will be imperatively so next summer. The only one I know of so far, however, is that to be taken in ready to set up at once and capable of turning out enough "to build a town in a day," as early as possible in the spring. It is part of the project of the million-dollar company, formed of rich and practical mine owners from Colorado, recently formed.

Loggers are in demand there and are paid $15 to $20 a day. They float their logs down the river in small rafts. There is a curious current in front of Dawson, part of the river flowing up and part down, so that it is a difficult thing to land the rafts there.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

C. H. MORTIMER
PUBLISHER
CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Special pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

### OUR REVIEW NUMBER.

FOLLOWING our custom in past years, the next issue of THE LUMBERMAN will contain the annual review of the lumber trade for the year 1897. This we desire to make even more complete than heretofore, and would ask the assistance of our readers to this end. In order to secure the required information, printed circulars have been mailed to a large proportion of the saw mill owners throughout the Dominion, and it is earnestly hoped that manufacturers will answer as many as possible of the enquiries and return the circular to this office at their earliest convenience.

Those who through inadvertence may not recieve the circular are asked to send us particulars of the season's trade, including volume of output as compared with the previous year, quantity of lumber in stock, and such other information as will assist us in compiling a review which will be of interest and value to the trade generally. A copy of the circular will be sent on application to any manufacturer who may have failed to receive one. Whenever a wish is expressed that the name of the manufacturer should not appear in connection with the particulars supplied, the request will be complied with.

Manufacturers are asked not to confine their remarks to answering the questions asked in the circular, but to supplement these with any comment which they may feel disposed to offer regarding the season's trade and the outlook for the new year. By the kind assistance of lumbermen we hope to present in our February number a more complete review than ever before.

### TIMBER POLICY OF THE ONTARIO GOVERNMENT.

IT was generally understood that the Ontario Legislature was convened earlier than usual this year for the purpose of dealing with the timber question, public sentiment having demanded that some action should be taken. In the speech from the throne on November 30th, the Lieutenant-Governor announced that among other measures to be submitted to the House would be a bill relating to timber and timber licenses. The question was also referred to at length by both the mover and seconder of the address, and the debate thereon continued for several days. Mr. Whitney, the leader of the Opposition, led a vigorous attack upon the Government for not having immediately announced its policy, his contention being that no saw-logs should be allowed to be exported from the country.

While this discussion was in progress, a deputation of Georgian Bay lumbermen interviewed the members of the Cabinet, reiterating their claims for the compulsory manufacture of the timber in Canada. By a report of this conference, published elsewhere in this number, it will be observed that the deputation urged that whenever conditions between the United States and Canada were equalized, then the Government should have power, by order-in-council, to remove the manufacturing clause.

The Government remained sphinx-like, and not an intimation was given as to what course was likely to be pursued. The report gained currency that an effort would be made to relieve the situation by imposing increased stumpage dues on all logs intended for export. This proved to be without foundation. The Opposition also claimed that the delay in presenting the bill was the result of a faint hope on the part of the Government that such reciprocal arrangements might be entered into between the authorities at Ottawa and Washington as would relieve the Provincial Government of the necessity of providing a remedy.

When, therefore, on the 20th of December, the Government brought forward a bill which provides that all licenses issued after April 29th next shall contain a provision that the timber must be manufactured in Canada, it came somewhat in the nature of a surprise. That the bill will be passed by the House may be said to be certain, as from no direction is there reason to expect opposition. The firm and decisive stand taken by the Government must be commended, and will, we feel assured, meet with the approval of lumbermen in general. The application of the manufacturing clause to current licenses has some advocates, but the majority are free to admit that it would be an injustice to interfere with the present winter's log production. From statistics received it is shown that the cut by American operators has thus far only slightly exceeded that of last year, and the season is now too far advanced to admit of any material increase.

The nature of the legislation is different in character from any heretofore adopted affecting the export of saw-logs. In some instances in the past a provision has been made at the time of the sale that the timber should be manufactured in Canada, but the present regulation provides that in future no timber shall be allowed to be taken out of the country in its raw state. Furthermore, no provision is made for changing the regulation by order-in-council, and it will therefore require another Act of Parliament to remove it from the Statute Book.

The legislation as framed at Washington has for years contained a retaliatory clause, by which it was hoped to retain free access to the timber of Canada, while at the same time compelling our manufacturers to pay a duty for the privilege of selling lumber in the United States market. We do not underestimate the value of this market to the lumbermen of Canada; on the other hand, we recognize the advantages of free interchange, but when it is presumed to so legislate as to place all the advantages on one side of the line, then the time for action here would seem to have arrived. The step that has now been taken may serve to bring our neighbors to a realization that there are mutual interests to be considered.

### SPAIN AS A MARKET FOR CANADIAN LUMBER.

MR. William Wyndham, consul at Barcelona, in a communication to the Department of Trade and Commerce at Ottawa, draws special attention to Spain as a possible market for Canadian lumber. The Spanish forests have been depleted, and supplies are now obtained from Russia, Norway and Sweden. It is gratifying to learn that this market has already received the attention of Canadian lumber shippers. During the past summer the first cargo to Spain was shipped from Quebec, and a second within the past month, while several smaller cargoes have gone forward from New Brunswick ports.

Particulars of only the first shipment from Quebec are to hand. The cargo consisted of 680 standards of 3-inch deals for Barcelona and 166 standards for Valencia, or a total of 1,675,080 feet. The freight from Quebec per standard of 1,980 feet was $13.20 for deals and $8.80 for ends, 9 feet and under. The deals were mostly 12 to 16 feet, and 3x6, 3x7, 3x8 and 3x9. The cargo for Barcelona was valued at $13,810, the manifest value being given as $15.677, and the 166 standards delivered at Quebec were invoiced at $3,696. Although we have no particulars of the prices at which the goods were sold, it is believed that the venture proved quite satisfactory to the shippers, as the fact of another shipment being made would indicate. Next season further efforts will no doubt be made to capture this market.

A correspondent of the Northwestern Lumberman furnishes some information regarding freight rates and duties which may be of interest to intending shippers. Rates of freight to Barcelona from Russia and Norway and Sweden rule from $9.75 to $12.25 per standard, and from the United States about $18. The customs duty on a cargo is three pesetas (59 cents) per cubic foot. The duties payable by ship are 4.875 pesetas (94 cents) when coming from Europe and 8.75

pesetas ($1.69) when coming from other parts of the world, for each 1,000 kilogrammes, or 2,240 pounds, of cargo discharged.

Prices of timber in Barcelona are from $6.30 to $7.50 a dozen pieces of planks, which is about 60 per cent. more than quotations in Norway and Sweden.

## EDITORIAL NOTES.

THE construction of the Ottawa and New York Railway, now nearing completion, will doubtless prove of great benefit to the lumber industry of the Ottawa valley and Eastern Ontario, shortening, as it will, the distance to the New York market. The distance by this road from Ottawa to New York, via Cornwall, will be 424 miles, while the distance via the Canada Atlantic, Delaware and Hudson, and New York Central railways is 469, 504 and 590 miles respectively. The new road will cross the St. Lawrence at Cornwall.

THE contention that carrying charges will prevent the shipment from Ontario to European countries of anything but the better grades and highest-priced lumber meets contradiction in the facts as they exist to-day. Already some of our largest manufacturers have been shipping box shooks to England, and we are informed that the Buckley & Douglas Lumber Company, of Manistee, Mich., recently loaded eight cars of two-inch hemlock, dressed, for shipment to South Africa. This shipment stands as an evidence of the new markets that are daily opening up for the timber products of the American continent.

A RECENT number of an English exchange states that sufficient attention is not paid by the wood-working establishments of Great Britain to the manufacture of trifles. This remark is equally applicable to Canada, and touches the point upon which hinges much of our future success in the disposition of our timber. The markets of foreign countries are limited, and when the supply exceeds this limit, the buyer is in a position to dictate to the seller, and prices immediately weaken. To guard against this condition, we should endeavor to manufacture as much of our lumber as possible into articles of woodenware, and by this means afford employment to a greater number of workmen. As an instance, the United States exports annually hundreds of thousands of stepladders to Great Britain, France, Germany, South America, and other countries. These stepladders are made of spruce or pine, from material which in many mills is allowed to go to waste or finds its way to the furnace to be used as fuel.

WE have recently heard the complaint that the insurance rate on saw mill property and lumber was too high, and in view of the excessive rate, some lumbermen have been carrying their own insurance. Owing to the inflammable nature of saw mills and the lumber in surrounding yards, the losses by fire are greater, perhaps, than in any other line of industry, and to this is attribuable the high rate charged by the insurance companies. Saw mill owners would no doubt find it profitable to equip their mills more thoroughly with fire-fighting appliances, of which there are a number on the market. Among the most efficient methods of protection is the ball nozzle system, controlled by the Ball Nozzle Company, of Toronto, which can be arranged to protect the lumber yard as well as the saw mill. The provision of such apparatus would lessen the danger of loss from fire, and, by reducing the percentage of loss in proportion to the value of property insured, eventually secure a reduction by the insurance companies of the rate charged on saw mills.

ADVERTING to the remarks in our last issue pointing out the wisdom of making a forestry display at the Paris Exposition in 1900, we have been advised by the Honorable the Minister of Agriculture that it is the intention of the Dominion government to make a special exhibit of forest products at this Exhibition. Just what steps the provincial governments will take to assist this commendable movement is somewhat problematical, although, in view of our rapidly increasing export trade, we feel reasonably certain that the matter will receive the consideration which its importance demands. In this connection, we observe the somewhat singular but undoubtedly correct statement, made by Major Moses P. Handy, special United States Commissioner to the Paris Exposition Universal, that South American purchasers go to Paris to buy. Thus, not only will a creditable exhibit of forest products tend to popularize our manufactures in the European markets, but visitors from almost the whole world will view the exhibit. At a time when so much attention is being directed to the pulp industry of Canada, we hope the opportunity to make known our possibilities in this direction will be taken advantage of.

## CANADIAN WEST INDIA TRADE.

HALIFAX, N. S., Dec. 24th, 1897.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—In your issue of this month "Progress" writes a long article on Canadian West Indian trade, which contains statements so wholly inaccurate and contrary to facts, so far as the steamship service to the West Indies is concerned, that we feel called upon to put you and the public in possession of facts.

Irregularity of sailings seems to be the chief grievance so far as we, who are managers of the steamers, are concerned. In refutation of this alleged irregularity, we would tell "Progress" that since the spring of 1891, when we became managers of the steamers performing the work, they have sailed in accordance with contract with the government regularly each month both from St. John and Halifax, and also on fixed dates from Georgetown, Demerara, on the passage north. As evidence of this we enclose the company's Windward Island sailing cards for portions of years 1894, 1895, 1896, 1897, those previous to 1894 having been destroyed. The Jamaica service has been as regular as clock-work since 1888.

So far as the lumber trade is concerned, we refer "Progress" to the lumber producers and sellers of Ottawa and other western cities, who will probably tell him the true reason for Canadian pine finding its way to the West Indies via United States ports. The fault does not lie at the doors of the Canadian subsidized steamers.

Yours respectfully,

PICKFORD & BLACK.

## NEW BRUNSWICK LETTER.

[Regular Correspondence of the CANADA LUMBERMAN.]

NOW that nearly all the exporting for the year has been completed, shippers find more time to review their season's work, to cash up their accounts and reckon gains and losses. The confident feeling of the early part of the summer has in a measure been sustained by the large shipments, and it is probable that the losses will be found in the background.

It is safe to conclude that during the year at least 50,000,000 feet has been shipped from St. John in excess of the output of 1896, and as last year exceeded 1895 by 40,000,000 feet, the increase of the two years will be appreciated.

In making the following detailed review of the three years, the chief importing ports are given. The item set down opposite Manchester in the list of 1897 shipments shows some benefit to have been derived by Canada on account of the new ship canal.

The lumber shipments from St. John, N.B., to United Kingdom and continent of Europe were:

1895.

| Ports. | Spruce Deals. (Superficial Ft.) | Birch. (Tons.) | Pine. (Tons.) |
|---|---|---|---|
| Liverpool | 46,003,954 | 7,774 | 324 |
| Fleetwood | 5,917,199 | | |
| Bristol Channel | 23,973,809 | | |
| Other Ports (British) | 15,001,004 | 945 | |
| Ireland | 37,491,843 | | |
| Continent | 1,039,139 | | |
| Total | 129,426,848 | 8,719 | 324 |

1896.

| | | | |
|---|---|---|---|
| Liverpool | 67,292,634 | 8,740 | 128 |
| Fleetwood | 8,695,446 | | |
| Bristol | 37,797,014 | | |
| Other Ports (British) | 22,866,977 | 2,120 | |
| Ireland | 27,350,705 | | |
| Continent | 4,657,174 | | |
| Total | 168,659,950 | 10,860 | 128 |

To October 31st, 1897:

| | Spruce Deals. (Super. Ft.) | Bir h Deals. (Super. Ft.) | Birch. (Tons.) | Pine. (Tons.) |
|---|---|---|---|---|
| Liverpool | 55,854,896 | 1,906,852 | 7,801 | 92 |
| Fleetwood | 14,167,369 | 334,656 | | |
| Bristol Channel | 52,019,207 | 574,289 | | |
| Ireland | 51,208,528 | 31,637 | 40 | |
| Continent | 7,139,961 | | | |
| Manchester | 26,069,577 | | | |
| Glasgow | 11,080,677 | 1,599,447 | 314 | |
| London | 3,950,055 | | | |
| Other Ports | 3,323,661 | 112,559 | | |
| Total | 224,813,931 | 4,559,440 | 8,155 | 92 |

A shipment was sent last month to Spain by A. Cushing & Co., through Mr. Geo. McKean, as shipper, amounting to 600,000 feet of deals and ends. Very little, I am informed, has been sent to that country heretofore. Malcolm McKay sent two cargoes of 250 standards each this year to Valencia, Spain. He also sent a couple of small casgoes to Cartagena, Spain. I am also informed that Hon. J. B. Snowball, of Chatham, N. B., shipped two small cargoes to Valencia this season. Shippers report a number of inquiries for lumber from Spain and France. They think the continental lumber outlook is quite promising. St. John also sent 1,930,643 feet of spruce deals to Australia this season.

ST. JOHN, N. B., Dec. 22nd, 1897.

The following table shows the amount of timber lands placed under license in Ontario to this date, both before and since Confederation:—

| | Sq. miles. |
|---|---|
| Before Confederation | 12,465 |
| Sold by Sandfield Macdonald's government | 635 |
| Sold by the Blake government | 5,031 |
| Sold by Oliver Mowat's government during 24 years: Under Mr. Pardee as Commissioner, 3,226; Under Mr. Hardy as Commissioner, 1,009 | 4,235 |
| Sold under the present government | 159¼ |
| Total | 22,525¼ |

## THE PATENT CLOTHBOARD COMPANY.

THE organization of the Patent Clothboard Company was recently referred to in this journal. This company is now located at Parry Sound, on the Georgian Bay, at the terminus of the Ottawa, Arnprior and Parry Sound railway, which gives them excellent facilities for direct shipments and export trade.

The manufacture of cloath boards (which are used for rolling cloth and other fabrics) is the object of the company. These are exported to European and American markets, and are made of basswood, which, from its lightness and freedom from knots and resin, is much in demand. The process of manufacturing is a new one, and turns out a smooth, clean board, much superior to those made from pine and other heavy woods which are subject to knots, resin and sap. The company will also export hardwood veneers to the European market.

The mill proper has been planned and built for its special purpose, and is so arranged as to save labor at every possible point. The main building is 50 x 100 feet, with addition 65 x 35 feet containing steaming vats, etc. The boiler and engine house, 32 feet square, is erected of stone and brick, and is entirely separated from the main structure. The company have also erected a wharf, with tramway, to facilitate the loading and unloading by water transport.

The factory is unique in many respects, and is thoroughly equipped with modern machinery, many of the machines being the first and only ones brought into Canada, and of the best and up-to-date manufacture.

PATENT CLOTHBOARD COMPANY'S FACTORY, PARRY SOUND, ONT.

The process of manufacturing is about as follows: The logs are drawn up the ladder, cut in two, put into steam vats and thoroughly steamed. They then go through a 16-ton Keeley veneering machine, claimed to be the largest of its kind in Canada. By this machine the logs are sliced into quarter-inch or three-eighths inch boards, according to order. These boards are then passed through an automatic jointer, which cuts them the proper width, then twice through a six ton giant wringer, which squeezes out all the water absorbed in steaming; then into an automatic drier, which is a marvel of its kind, contains seventy-two steam drying chambers and works like a bellows, the automatic motion of opening and closing being regulated by electric batteries; when dry the cloath-boards are taken from the drying machine, passed through champing machines, then to the frizzing machines and finally to the sand paper machine, when they are ready for packing. The logs are pared by the veneer machine down to eight inches and the cores are run through a slab re-sawer and cut up into box shooks. There is also an automatic knife grinder, a saw table and other machinery, and the logs are handled from the steam vats to the veneer machine by pulleys and an overhead railway.

The machinery is propelled by a steam engine of 125 h. p., steam being supplied by a battery of two 60 h. p. tubular boilers. The factory was built by A. Logan, contractor, and the machinery was all put in under the supervision of Mr. E. T. Henry, foreman of the works, late of Honox, Michigan, and an expert in his line, assisted by Mr. Thomas Yates, of Parry Sound. The capacity of the factory is 20,000 pieces in a day of 10 hours.

Trial shipments of cloth-boards in car load lots have been made to American and English cloth makers. The company expect to work up a large trade and intend running day and night.

The concern is a limited joint stock company, the capital being held by Canadian and American gentlemen. Mr. W. H. Marcon, late of Steele, Briggs & Marcon, Toronto, is president, and Mr. W. W. Keighley, late of Smith & Keighley, Toronto, secretary-treasurer. The company have given contracts for large quantities of basswood timber and expect to manufacture largely. At a later date we hope to give a more complete description of this new enterprise.

## LAKE OF THE WOODS MILLS.

TO a representative of the Commercial, Mr. D. C. Cameron, of Rat Portage, said that business had been very good this season with the Lake of the Woods mills. Sales had been larger and payments better. Another favorable feature was the large reduction in stocks. This winter the mills were carrying over much lighter stocks than have been carried for many years, and this meant more money in hand and reduced interest and insurance charges. Prices obtained for lumber this season, however, were lower than ever before in the history of the lumber trade in this territory. Profits were small and the lumber trade generally was being done on a very close margin. If business continues to increase, however, they could afford to work on a closer margin. The cut of logs in the woods would be the largest, Mr. Cameron said, since away back in the "boom" days. He thought about 70,000,000 feet of logs would be taken out this winter. One year back in the "boom" period, the cut was reported to have reached about 80,000,000 feet, but it proved to be twice as much as was needed, and it broke the back of the lumber trade to carry the load, which remained a drug on the market for years. For the last couple of years the annual cut has been about 40,000,000 feet. Mr. Cameron said the mills were, of course, all closed, but they were working full force at their sash and and door factory. They kept a large force of men busy all winter in the factory and they would be in good shape to handle the Manitoba and western trade in sash and doors, and supply the market with home manufactured goods equal in quality to the best imported lines. They were building up a large home industry in this branch, which would render it unnecessary to bring in imported goods. Their supplies came largely from Winnipeg and Manitoba, thus making their industry a benefit to the people here. Regarding the talk a short time ago about the proposal of certain Minnesota people to start large saw mills in Winnipeg, Mr. Cameron said he did not think there was anything in it. The party who had first given out these reports, and whose name, with others, had been mentioned in the proposed enterprise, had, he understood, since taken an interest in a mill at Rainy river, in connection with the former proprietors.

## NEW PULP MILL IN NEW BRUNSWICK.

WOOD Pulp, of London, Eng., in a recent issue, contains particulars of a Scottish-Canadian company, formed to erect a pulp mill at Mispec, N. B. This journal says:

The St. John Sulphite Pulp Company, Limited, has been registered, with a capital of £60,000. The directors are: John Galloway, of Seggie, Managing Director of the Guard Bridge Paper Co.; Charles Anderson, of Fettykil, Leslie, and Thames Paper Mills, Purfleet, London; William Denison Dickson, Markinch; Forbes T. Wallace, Banker, Director of the Guard Bridge Paper Company, and Phillip Grosset, Leven, the latter being Managing Director.

The prospectus states that the company has been formed for the manufacture in Canada of sulphite pulp for the European market. Within the last few years the manufacture of paper has been completely revolutionized by the substitution of wood pulp for esparto and rags as a paper making material, and it is probable that at the present time there is no other industry offering such certain and lucrative results as the production of wood pulp, for which a great demand exists.

A site for the works has been secured at Mispec, extending to 24 acres or thereby, with valuable water power equal to 800 horse power, taken at a minimum flow. Mispec is in the parish of Simonds, in the county of St. John, N. B., and situated on the Bay of Fundy, about 7 miles to the eastward of St. John. The site, including water rights, was recently acquired by Mr. M. F. Mooney, of St. John, a practical pulp-maker, who has had a long experience in the manufacture of sulphite pulp both in Canada and the United States, and has been sold by him to the company at the price of £2,000, which sum he is to invest in shares of the company. The Mispec river receives its supply of water from four lakes, one of which, Loch Lomond, is about 12 miles long and one mile broad, and the quality of the water, which has been analyzed, is pronounced as most suitable for the manufacture of pulp. These lakes are surrounded by spruce forests, which are mostly in the hands of small farmers, from whom the wood can be purchased as cheaply as anywhere else in Canada. The principal supply of timber will be drawn from the St. John river, which is 450 miles long and runs through a woodland the whole length of New Brunswick, part of the province of Quebec, and part of the state of Maine. There are, moreover, numerous tributaries flowing through woodlands into the St. John. The supply of timber is thus practically unlimited.

Buildings will be erected to accommodate plant to produce 40 tons of dry pulp per day, but, in the meantime, machinery for 20 tons per day only will be put in. The buildings will be of stone and brick, and are estimated to cost £6,500. The machinery, plant and utensils are estimated to cost £24,500. The details have been carefully considered, and the cost fairly estimated. The cost of the machinery to double the output is estimated at £15,000. The erection of buildings and placing of machinery will be superintended by Mr. Mooney, along with Mr. Philip Grosset, of Penobsquis, Canada, who has also a thorough knowledge of the manufacture of first-class sulphite pulp. These gentlemen will manage the works after erection.

---

Among the many souvenirs to hand is a paper weight, in the form of a horse-shoe, bearing the inscription, "Thomas Meaney & Co., wholesale lumber, 103 Bay street, Toronto, Canada."

The author of a paper presented to an English society says that in the only case of a split steam pipe within his recollection, the accident was caused by the boiler water having been allowed to prime into it, producing, probably, sudden contraction. It is difficult to see how water of the same temperature as the pipe could produce contraction. Water hammer would be a better explanation.

By a recent concession of the French government, Canadian exports of wood pulp via New York will have the benefit of the minimum French tariff. Under the commercial treaty between France and Canada pulp from this country is entitled to admission at the minimum tariff rate, but as most of the shipments made from Canada to France must go via New York—there being no direct steamship connection—the pulp was likely to be classed as American and taxed the maximum rate of duty.

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. III. TORONTO, ONT., DECEMBER 29, 1897 No. 50.

## CANADA LUMBERMAN

PUBLISHED BY

C. H. MORTIMER

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the "Canada Lumberman."*

Toronto, Canada
C. H. MORTIMER, Publisher
1895

THE above is a fac simile of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of four 3 cent Canadian postage stamps

THE CANADA LUMBERMAN,
*Toronto, Canada*

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

### HARDWOOD FOR SALE.

4,000 ACRES OR MORE BIRCH, MAPLE, basswood and soft elm land for sale cheap, on Lake Huron. Cargo lots logs can be shipped, also rail facilities; good mill site for sale. Address COLONIZATION AGENT, Can. Pac. Ry., Montreal.

### WANTED.

A PRACTICAL PULP MAKER, AS MANAGER for new Mechanical Pulp Mill, who is conversant with all modern improvements both for making and drying. Applicants please write, stating qualifications, business career, and salary required, to "MECHANICAL," Post Office, Missanabie, Ont.

### WANTED.

ALL KINDS OF HARD AND SOFT WOOD lumber, all grades and thicknesses. Quote lowest cash price f.o.b. New York, lighterage free. Will accept draft with bill of lading for 50 per cent. of invoice; balance cash upon receipt of lumber. GREENPOINT LUMBER CO., Brooklyn, N. Y. Reference, National Broadway Bank, New York.

### VALUABLE Saw Mill Property FOR SALE

**A Valuable Mill Property at Cache Bay, North Shore of Lake Nipissing, on Main Line of Canadian Pacific Railway.**

The mill is a first-class frame building with iron roof. It has two first-class band mills (Waterous make) one steam feed, the other with oscillating twin engines, and rotee feed for cutting long stuff; also one circular saw rig, steam feed, and one Wicks stock gang, made by the Wm. Hamilton Manufacturing Co, of Peterborough; two large double edgers and three sets trimmers; two slash tables and carriers, complete; one lath mill and bolter, made by the Wm Hamilton Co, and one Boss shingle machine and jointer. Power is derived from six large steel boilers, with one large engine 24x30, also one engine 18x24, all made by the Wm. Hamilton Manufacturing Co.; also shafting, boxing and belting, everything complete.

The mill has only been running for a few years and is in good repair.

There is a first-class storehouse on the premises, with iron roof, and stabling for ten teams of horses.

There is a good boarding house, capable of boarding 150 men, besides a good general store and office, and about 25 dwelling houses for employes.

This is a very desirable property, and should command the attention of leading lumbermen, as it is situated within six miles of the mouth of the Sturgeon River, where the logs from all the large tracts of pine still unsold by the Provincial Government on the Sturgeon, Tomako, Tamagamingue and Pike Rivers will be delivered.

There is a good supply of filing machines, swedging machines, rolling and hammering machines, and gumming machines, besides all necessary saws and tools required for the running and keeping in repair of the mill.

There is also a good yard, with railway sidings and piling grounds for from 16,000,000 to 20,000,000 feet of lumber

Favorable rates ran be secured by the C. P. R. to Montreal and points for Old Country shipments

The property will be sold cheap and on Country shipments.

Intending purchasers coming to inspect the property should write or wire Alex. Hamilton, of Warren, Ont., late manager of the mill, who will meet them at the mill and give them all necessary information regarding the property and the standing timber tributary to the mill.

### WANTED FOR CASH.

SOFT ELM AND BROWN ASH—FIRSTS AND Seconds and Good Common. Address, JOHN S. MASON & Co., 240 11th avenue, New York City.

### WANTED.

LUMBERMEN TO ADVERTISE IN THIS column stocks of lumber for sale. Probable purchasers look for this information. Address, CANADA LUMBERMAN, Toronto.

### CURRENT TRADE CONDITIONS.

#### ONTARIO.

Dealers in white pine lumber are finding ample time for enjoying the holiday season, there being little business to engage their attention. The cold weather and snow have caused a total cessation of building operations, and the local demand, which was of fair volume during the fall months, is now largely confined to finishing material. It is expected that the spring trade will consume a considerable quantity of timber, as there are a number of new buildings in contemplation in the principal cities. Several charters for railways are also before the Ontario Legislature, which, if built during the coming year, will prove a benefit to the lumber trade. Prices in the Eastern States are firm, and on some grades an advance is being realized, so that as soon as the spring trade commences to move, we may expect a good demand from this quarter. A fair trade continues in hardwoods, maple, birch, elm and basswood being in greatest enquiry. There is now a scarcity of dry stock, and this promises to restrict trade greatly before the new cut becomes available.

#### QUEBEC AND NEW BRUNSWICK.

The Quebec timber trade is quieter at the present time than at any other period during the past six months. One of the most prosperous seasons in the history of the trade is drawing to a close, as will be observed by the statement of shipments from Montreal published in another column. These show a considerable increase over the previous year. Although the outlook for 1898 is not all that might be expected, dealers and manufacturers are disposed to the belief that as spring approaches business will increase to a fair volume. The New Brunswick deal market is featureless. No contracts are being made, and only very light shipments are going forward by the regular lines of steamers. Some small lots of shingles and lath have been sold in the United States market. Work in the woods is progressing favorably, there being plenty of snow to permit of hauling to the streams.

#### MANITOBA AND BRITISH COLUMBIA.

The lumber business in Manitoba, until recently quite active, has suddenly decreased in volume, the result of unfavorable weather conditions. Dealers look forward to an early spring trade, as the farmers generally have had a prosperous season and feel encouraged to carry out needed improvements. Just at the present time collections are slower than they should be. In British Columbia there is also a hopeful feeling, as British capital is being invested quite liberally at Vancouver, Victoria and other centres. Increased trade with the Northwest is also expected next year.

#### UNITED STATES.

If we confine our remarks to the moving white pine trade, we find that conditions have changed but little since our last report. Business is very light, and wholesale buying is practically over for the year. The demand for building materials is now confined to the class of stock that is used for interior finish, the cold weather having checked all out-door operations. A feature of the trade of the season now closing was the increased demand for common lumber. The reason for this is found in the prosperous condition of the farmers in the west, who have found themselves with necessary capital to carry out needed improvements and new works. This has consumed much lumber that would otherwise have been thrown upon the eastern market and come in competition with Canadian lumber. At the present time prices of the better grades are firm, while the lower grades have advanced slightly during the year. Turning to the prospects for 1898, there is a general belief among the trade that business will show a marked improvement at an early date. Contracts have already been made for spring delivery, and negotiations are now pending for several large stocks. Although at wholesale points the supply is quite ample, there is less stock held at the mills than usual, and dealers are inclined to hold prices firm during the winter. Shortages prevail in 12-foot boards, piece stuff and shingles. The spruce market is featureless. At Albany 1¼ x 9 spruce is scarce, and prices are consequently a little firmer for this size only.

The hardwood trade has steadily improved during the last six months. Even at the present time dealers report numerous inqiries for stock, and wholesalers are buying whatever dry stocks they can find. At Buffalo black ash is moving well,

though white ash is quiet. Prices generally have an upward tendency. In Wisconsin the stock of dry hardwood is short. In hickory, rock elm and hard maple there is almost a famine.

FOREIGN.

There appears to be a little more activity on the part of British importers in buying for next season's delivery. The Timber Trades Journal announces that a number of leading shippers have sold over a third of their year's production, while of a few specially favorite stocks more than half has already been placed. There are indications that current prices will be maintained, unless the engineering strike should prove a greater barrier to trade than is anticipated, but it is almost certain to be settled before many weeks, and then increased consumption may be expected. New Brunswick and Nova Scotia spruce deals continue low in price. Quebec deals are firmer, especially the better grades. The prospects for Canadian spruce are not discouraging, as the wood seems to be growing in favor at many of the ports. A little caution on the part of shippers will greatly assist the market in recovering its former strength. At Liverpool there are numerous enquiries in the market from contractors, railway companies and other large consumers, and important contracts will shortly be entered into.

## STOCKS AND PRICES.

CANADA.

The Kalousa is loading lumber at Chemainus, B.C., for Sydney, Australia.

M. M. Boyd & Co., of Bobcaygeon, Ont., sent a gang of men to their limits in Glamorgan last week.

Prouty & Miller, of Newport, Que., are getting out timber this year from their limits in Oxford.

James Hart, of Rosseau, Ont., has a contract to get out 15,000 feet of logs and 1000 cords of shingle bolts.

The Lake of the Woods Milling Company have a camp of 20 men getting out stave timber on the Rainy River.

David Maxwell & Sons, agricultural works, St. Marys, Ont., are in the market for hardwood logs of all kinds, cut to fourteen feet lengths.

Mr. G. M. Warren, of the Imperial Lumber Co., Toronto, has been in Michigan recently. This company handles about 30,000,000 feet of deals in a season, securing a portion of the stock in Michigan.

Two timber berths were sold at the Crown Lands office, Fredericton, N.B., last week, as follows: 2 miles on Muniac river, Vic. Co., to Geo. T. Baird, at $35 per mile; 2 miles on N.W. Miramichi river, below Chaplain's Island, to P. Hennessy, at $112 per mile.

The following shipments were made from St. John, N.B., last week: For Buenos Ayres, per bark Antilla, 239,532 ft. boards, 275,096 ft. scantling, 25,596 ft. planks, by A. Cushing & Co. For Belfast, per s.s. Teelin Head, 2,070 ft. white pine plank, 31,798 ft. do deals, 1,709 ft. do ends, 2,933 ft. hemlock boards, 95,999 ft. deals, 1,515 ft. ends, 89,358 ft. deals and battens. For Glasgow, per s.s. Concordia, 116,369 ft. pine deals, 1,158 bales wood pulp, and 38,349 ft. deals, by W. M. Mackay; 193,115 ft. deals, by N. H. Murchie; 24,516 ft. box boards, 64,827 ft. pine deals, 187 ft. ends, 22,279 ft. spruce battens, by A. Cushing & Co. For Liverpool, per s.s. Lake Winnipeg, 140 tons pulp, 27,626 ft. deals and battens.

FOREIGN.

The Saginaw Salt and Lumber Co., of Saginaw, Mich., are shipping considerable lumber to the Argentine Republic.

The Buffalo market wants dry soft elm and hickory. There is a good export demand anticipated as soon as business commences to move in the spring.

At Boston the lumber market is quiet. The call for clapboards is better than for any other material. Short lumber is in very light supply. Spruce frames are gaining in strength, and efforts are being made to get the ruling price at $13. From Portland, Maine, a large quantity of lumber is being exported.

In the Wisconsin valley the production of logs this winter will exceed that of last year by about one-third. An increase will also be made in the Upper Mississippi.

It is estimated that the mills at Alpena, Mich., will have 100,000,000 feet of logs for next season's supply. The output of these mills this year was 105,200,000 feet.

C. H. Bradley & Co. estimate that there is 130,000,000 feet of lumber on the docks at Duluth—Superior, of which 30,000,000 feet is sold, leaving 100,000,000 feet of unsold lumber.

It is reported that the Kirk-Christie Company, of Cleveland, Ohio, have contracted for the supply of 4,000,000 feet of basswood, birch and elm logs, to be sawn at Menominee.

Messrs. R. Wade, Sons and Co., Limited, Hull, Eng., have obtained the contract for supplying the Midland Railway Company with timber, deals, scantling, &c., required during the next twelve months.

There is some improvement in the hardwood trade at Buffalo and Boston. At the former place black ash is moving well, and at Boston yard stocks have become greatly reduced and prospects are good for next year's business. Good grades of dry stock are scarce at the mills.

A statement, compiled from reports obtained from the collectors of customs, gives the quantity of logs rafted to Michigan from the Georgian Bay during 1897 as 252,344,532 feet. A comparison of the two years is as follows:

| | 1897. | 1896. |
|---|---|---|
| To Saginaw River | 147,280,234 | 166,967,208 |
| To Detroit | 19,966,000 | 20,269,000 |
| To Tawas Bay | 18,344,000 | 19,680,000 |
| To Alpena | 35,000,000 | 27,472,446 |
| To Cheboygan | 31,754,298 | 40,000,000 |
| Total | 252,344,532 | 274,388,654 |

It has been estimated that next season the quantity rafted will be between 350,000,000 and 400,000,000 feet.

The receipts of lumber, lath and shingles at Tonawanda this year were greater than for six years past. In 1890 the receipts were the largest on record, the figures being 718,600,000 feet of lumber. The following table shows the comparative receipts for the past ten years:

| | Lumber, feet. | Lath. | Shingles. |
|---|---|---|---|
| 1887 | 501,237,000 | 4,096,000 | 53,400,000 |
| 1888 | 269,522,000 | 16,617,000 | 64,9 0,000 |
| 1889 | 676.017,000 | 11,506,000 | 68,700.000 |
| 1890 | 718,650,000 | 13,039,000 | 52,232,000 |
| 1891 | 505,512,000 | 8,209,000 | 52,561,000 |
| 1892 | 498,000,000 | 6,243,000 | 42,809,000 |
| 1893 | 130,249,000 | 13,23 ,000 | 35,250,000 |
| 1894 | 406,538,000 | 8,495,000 | 31 478,000 |
| 1895 | 421,372,000 | 8,547,000 | 41,310,000 |
| 1896 | 489,676 000 | 7,186 000 | 35,822,000 |
| 1897 | 601,378,000 | 7,528,000 | 48 501,000 |

Lumber prices at Boston rule as follows: Spruce—Random cargoes, $12 to $12.50; car lumber, frames, ten inches and under, $13 to $14; 12 in., $14 to $14.50; wide and long, $15 to $16; boards, planed one side, $11 to $12.50; kiln dried floorings, $20 to $24; No. 1, $17 to $19; laths, 1⅝ in., $2 to $2.15; do, 1½ in., $1.75 to $1.90; extra clapboards, $29 to $31; clear, $27 to $28. Pine, hemlock, etc.—No. 2 eastern pine, $16 to $17; matched boards, $19 to $22; extra clapboards, $35 to $40; clear, $30 to $35; second clear, $28 to $30; extra cedar shingles, $2.65 to $2.70; clear, $2.25 to $2.50; second clear, $1.75 to $2; eastern hemlock, No. 1, $10.

## LUMBER EXPORTS FROM MONTREAL.

This has been a record breaking season in the export timber business from Montreal, the shipments being 300,420,c69 feet, which are the largest in the history of the trade, and although these figures do not include sundry shipments, they show an increase of 79,416,460 feet, as compared with the grand total of 1896; an increase of 131,748,041 with 1895, and an increase of 123,011,641 with 1894. The total shipments for the season 1895 were 168,672,628 feet, and for 1894 they were 177,408,428 feet. This season Messrs. Dobell, Beckett & Co. head the list with 98,000,000 feet, an increase of 44,000,000 feet as compared with 1896, and Messrs. W. J. Sharples come second with 56,829,640 feet, an increase of 11,959,800 feet compared with 1896, while Messrs. R. Cox & Co. take third place with 38,125,185 feet, showing an increase of 12,107,885 feet as compared with 1896

The following table shows the exports of timber made by the principal shippers from the port of Montreal for the season 1897, with comparisons:

| | 1897 Feet. | 1896 Feet. |
|---|---|---|
| Dobell, Beckett & Co | 98.000,000 | 54 000,000 |
| W. & J. Sharples | 56,829,640 | 44,869,840 |
| R. Cox & Co | 38,125,185 | 26,017,300 |
| J. Burstall & Co | 36,319,608 | 24,521,0 7 |
| McArthur Bros. | 32,786,506 | 19,192,515 |
| Watson & Todd | 30,359,130 | 25,642,000 |
| E. H. Lemay | 8,000, 00 | 4,932,000 |
| Sundry shippers | | 21 828,927 |
| Total feet | 300,420,069 | 221,003,609 |

The following figures give the quantity and value, in detail, of timber, deals and sawn lumber, etc., exported from Montreal during the season of navigation ending 30th November, 1897:

| Description. | Quantity. | Value. |
|---|---|---|
| Battens | | $ 2,784 |
| Deals, pi e, standard, hundreds. | 70,569 | 3,478,843 |
| Deals, spruce and other, standard hundreds | 13,683 | 432,148 |
| Deal ends, standard hundreds | 7,157 | 353,346 |
| Palings, standard hundreds | 30,502 | 290 |
| Planks and boards, million feet | 35,510,726 | 739,931 |
| Scantlings, million feet | 289,190 | 6,676 |
| Staves, others, etc. | | 34,004 |
| All other lumber | | 51,884 |
| Timber, sq. ash, tons | 1,787 | 16,920 |
| " sq. birch, tons | 5,801 | 55,951 |
| " sq. elm, tons | 1 808 | 18,507 |
| " sq. maple, tons | 97 | 1,111 |
| " sq. oak, tons | 395 | 5,781 |
| " sq. white pine, tons | 4,450 | 57,773 |
| All other, tons | 643 | 17,865 |

## AN AUSTRALIAN REPORT.

Fraser & Co., of Melbourne, Australia, in their last monthly timber report, say:

An improved tone has been perceptible in the market during the past four weeks. The demand has been better for most of the principal descriptions imported, due partly to an increase in the actual consumption, and partly to the fact of the trade recognising that first costs at the shipping centres are very firm, and likely to continue so, while for some important classes of lumber, notably Oregon, mill quotations and freight rates have lately advanced. Business has generally been concluded without any material change being made upon late values, but we are inclined to the belief that somewhat better prices will be experienced in the course of the next few months for many of the lines which usually are upon this market. There are indications of higher rates ruling in the near future for Oregon pine, spruce deals, and white pine, while for other classes of timber there is every appearance of values remaining quite firm. Supplies on the way and loading are generally moderate in extent, and, as just mentioned, export prices are not likely to be interfered with, and as freight quotations to this port will probably be enhanced, we are therefore justified in anticipating a brighter state of business locally, even though the forecast of our coming harvest is far from satisfactory. It is now estimated that we shall have but little wheat to export after meeting our own colony's requirements.

The imports of Oregon pine have been 1,690,000 superficial feet. A shipment per Sonoma has been placed to the trade, and some other business has been done "ex yard." Prices rule from £4 15s to £5, according to sizes required. At the former figure the bulk of the Sonoma's cargo was disposed of.

## LOG PRODUCTION.

The quantity of logs cut this winter in Northwestern Ontario promises to slightly exceed that of last season. The output of the Thunder Bay district will be about 10,000,000 feet, against 3,000,000 feet last winter. Probably 12,000 cords of pulp wood will be cut, this being an increase of 2,000 cords. Last season 4,000 cords were hung up, which may possibly be gotten out next spring also.

In the Algoma district there will be a curtailment in the production of board timber, only one cargo being made this winter. The American firms are operating quite extensively, especially the Central Lumber Co. and the Estate of S. G. M. Gates, the former making an effort to clean up their limit in the township of Montgomery, and the latter intending to clean up two of the limits belonging to the Estate, viz., Grassett and Ratton. This will increase the amount taken out by Americans from former years, but the aggregate will be nearly the same as last year. Cook Bros., who formerly took out from ten to twenty million feet per annum, are this year doing nothing. Last year they sold the bulk of their logs for export. Moiles Bros., on Johns Island, have also suspended operations for this winter at least.

There's MONEY in It!

Send Description and Weight of the SCRAP IRON you have, and turn it into Cash. If you have an abandoned Mill or Machinery fit for scrap heap, will also buy that.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5 cents per 100 lbs.; Arnprior to Montreal, 7 cents; Parry Sound to Montreal, 12 cents per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghamton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum we ght 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2 20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively: Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, and Michigan Cenrtal Railways, the rate is 14c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and no advanced rate is charged for hardwoods.

Mr. Geo. A. Fowler, lumber agent for the C.P.R., at Ottawa, writes as follows under date of Nov. 17, 1897: The winter rates went into effect on the 15th inst., and in so far as lumber is concerned the only rates which are materially affected by the change are the rates to Montreal, Quebec and points taking same rate. During the summer season we have on seasoned soft wood lumber weighing not more than 3,000 lbs. to the M ft. rates as follows to Montreal: From Ottawa $1.00 per M., excess over 3 0 0 lbs. to the M ft. to be charged for at 4 cents per 100 lbs.; from Arnprior, $1.50 per M, excess 6 cents per 100 lbs. The rates to Quebec during summer season are $2.00 per M ft., excess 8 cents per 100 lbs.; from Arnprior $2.50 per M, excess 10 cents per 100 lbs. The rates during the winter season; in effect from 15th inst., on all kinds of lumber to Montreal are, from Ottawa 5 cents per 100 lbs., from Arnprior 7 cents, and to Quebec from Ottawa 10 cents per 100 lbs, Arnprior, 12 cents; minimum carload, 30,000 lbs.

The rates to Boston and New England points, also all rail rates to New York and New York points, remain unchanged. The rates to New York and New York points via barge from Albany will remain in force until close of navigation.

## DOUR DAVIE'S DRIVE.*

PINNAGER was on snow-shoes, making a bee-line toward his field of saw-logs dark on the ice of Wolverine River. He crossed shanty roads, trod heaps of brush, forced his way through the tops of felled pines, jumped from little crags into seven feet of snow—Pinnager's men called him "a terror on snow-shoes." They never knew the direction from which he might come—an ignorance which kept them all busy with axe, saw, cant-hook, and horses over the two square miles of forest comprising his "cut."

It was "make or break" with Pinnager. He had contracted to put on the ice all the logs he might make; for every one left in the woods he must pay stumpage and forfeit. Now his axe-men had done such wonders that Pinnager's difficulty was to get his logs hauled out.

Teams were scarce that winter. The shanty was eighty miles from any settlement; ordinary teamsters were not eager to work for a small speculative jobber, who might or might not be able to pay in the spring. But Pinnager had some extraordinary teamsters, sons of farmers who neighbored him at home, and who were sure he would pay them, though he should have to mortgage his land.

The time was late February; seven feet of snow, crusted, on the level; a thaw might turn the whole forest floor to slush; but if the weather should "hold hard" for six weeks longer, Pinnager might make and not break. Yet the chances were heavily against him.

Any jobber so situated would feel vexed on hearing that one of his best teams had suddenly been taken out of his service. Pinnager, crossing a shanty road with the stride of a moose, was hailed by Jamie Stuart with the news:

"Hey, boss, hold on! Davie McAndrews' leg's broke. His load slewed at the hill-log catched him against a tree."

"Where is he?" shouted Pinnager furiously.

"Carried him to shanty."

"Where are his horses?"

"Stable."

"Tell Aleck Dunbar to go get them out. He must take Davie's place—confound the lad's carelessness!"

"Davie says no; won't let any other man drive his horses."

"He won't. I'll show him!" and Pinnager made a bee-line for his shanty. He was choking with rage, all the more so because he knew nothing short of breaking Davie McAndrews' neck would break Davie McAndrews' stubbornness, a reflection that cooled Pinnager before he reached the shanty.

The cook was busy about the caboose fire, getting supper for fifty-three devourers, when Pinnager entered the low door, and made straight for one of the double tier of dingy bunks. There lay a youth of eighteen, with an unusual pallor on his weather-beaten face, and more than the usual sternness about his formidable jaw.

"What's all this, Davie? You sure the leg's broke? I'd 'a thought you old enough to take care."

"You would?" said Davie grimly. "And yourself not old enough to have yon piece of road mended—you that was so often told about it!"

"When you knew it was so bad, the more you should take care."

"And that's true, Pinnager. But no use in you and me choppin' woods. I'm needing a doctor's hands on me. Can you set a bone?"

"No, I'll not meddle with it. Maybe Jack Scott can; but I'll send you out home. A fine loss I'll be at. Confound it—and me like to break for want of teams!"

"I've thocht o' yer case, Pinnager," said Davie, with a curious judicial air. "It's sore hard for ye; I ken that well. There's me and me feyther's horses gawn off, and you countin' on us. I feel for ye, so I do. But I'll no put you to ony loss in sendin' me out."

"Was you thinking to tough it through here, Davie? No, you'll not chance it. Anyway, the loss would be the same—more, too. Why, if I send out for the doctor, there's a team off for full five days, and the expense of the doctor! Then he mightn't come. Wow, no! it's out you must go."

"What else?" said Davie coolly. "Would I lie here till spring and my leg mendin' into the Lord kens what-like shape? Would I be lettin' ony ither drive the horses my feyther entrustit to my lone? Would I be dependin' on Mr. Pinnager for keep, and me idle? Man, I'd eat the horses' heads off that way; at home they'd be profit to my feyther. So it's me and them that starts at gray the morn's morn."

"Alone!" exclaimed Pinnager.

"Just that, man. What for no?"

"You're light-headed, Davie. A lad with his leg broke can't drive three days."

"Maybe yes and maybe no. I'm for it, onyhow."

"It may snow, it may———"

"Aye, or rain, or thaw, or hail; the Lord's no in the habit o' makin' the weather suit ony but himsel'. But I'm gawn; the cost of a man wi' me would eat the wages ye're owing to my feyther."

"I'll lose his team, anyhow," said Pinnager, "and me needing it bad. A driver with you could bring back the horses."

"Nay, my feyther will trust his beasts to nane but himsel' or his sons. But I'll have yer case in mind, Pinnager; it's a sore necessity you're in. I'll ask my feyther to send back the team, and another to the tail of it; it's like that Tam and Neil will be home by now. And I'll spread word how ye're needin' teams, Pinnager; it's like your neighbors will send ye in sax or eight spans."

"Man, that's a grand notion, Davie! But you can't go alone; it's clean impossible."

"I'm gawn, Pinnager."

"You can't turn out in seven feet of snow when you meet loading. You can't water or feed your horses. There's forty miles the second day, and never a stopping-place; your horses can't stand it."

"I'm wae for the beasts, Pinnager; but they'll have no force but to travel dry and hungry if that's set for them."

"You're bound to go?"

"Div you tak' me for an idjit to be talkin' and no meanin' it? Off wi' ye, man! The leg's no exactly a comfort when I'm talkin'."

"Why, Davie, it must be hurting you terrible!" Pinnager had almost forgotten the broken leg, such was Davie's composure.

"It's no exactly a comfort, I said. Get you gone, Pinnager; your men may be idlin'. Get you gone, and send in Jack Scott, if he's man enough to handle my leg. I'm wearyin' just now for my ain company."

As Davie had made his programme, so it stood. His will was inflexible to protests. Next morning at dawn they set him on a hay-bed in his low, unboxed sleigh. A bag of oats supported his back; his unhurt leg was braced against a piece of plank spiked down. Jock Scott had pulled the broken bones into what he thought their place, and tied that leg up in splints of cedar.

The sleigh was enclosed by stakes, four on each side, all tied together by stout rope. The stake at Davie's right hand was shortened, that he might hang his reins there. His water-bucket was tied to another stake, and his bag of provisions to a third. He was warm in a coon-skin coat, and four pairs of blankets under or over him.

At the last moment Pinnager protested: "I must send a man to drive. It shan't cost you a cent, Davie."

"Thank you, kindly, Pinnager," said Davie, gravely, "I'll tell that to your credit at the settlement. But ye're needin' all your help, and I'd take shame to worsen your chances. My feyther's horses need no drivin' but my word."

Indeed, they would "gee," "haw," or "whoa" like oxen, and loved his voice. Round-barrelled, deeply-breathed, hardy, sure-footed, active, gentle, enduring, brave, and used to the exigencies of "bush roads," they would take him through safely if horses' wit could.

Davie had uttered never a groan after those involuntary ones forced from him when the log, driving his leg against a tree, had made him almost unconscious. But the pain-sweat stood beaded on his face during the torture of carrying him to the sleigh. Not a sound from his lips, though! They could guess his sufferings from naught but his hard breathing through the nose, that horrible sweat, and the iron set of his jaw. After they had placed him, the duller agony that had kept him awake returned; he smiled grimly, and said, "That's a comfort."

He had eaten and drunk heartily; he seemed strong still; but what if his sleigh should turn over at some sidling place of the rude, lonely, and hilly forest road?

As Davie chirruped to his horses and was off, the men gave him a cheer; then Pinnager and all went away to labor fit for mighty men, and the swinging of axes and the crashing of huge pines and the tumbling of logs from rollways left them fancy-free to wonder how Davie could ever brace himself to save his broken leg at the cahots.

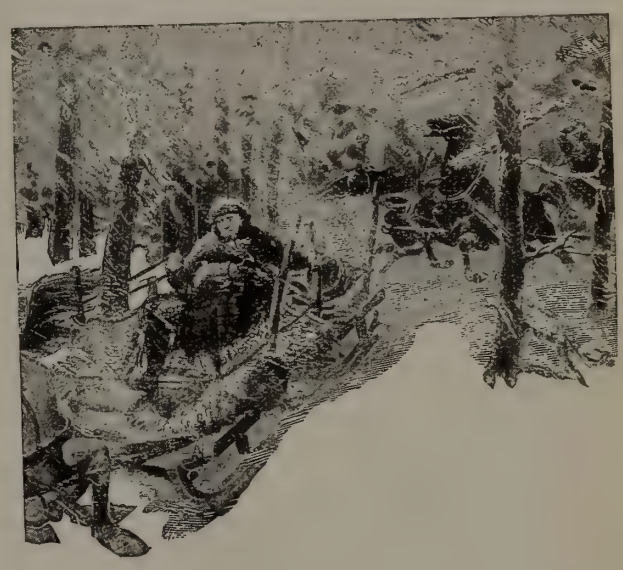
The terrible cahots—plunges in snow-roads! But for them Davie would have suffered little more than in a shanty bunk. The track was mostly two smooth ruts separated by a ridge so high and hard that the sleigh-bottom often slid on it. Horses less sure-footed would have staggered much, and bitten crossly at one another while trotting in those deep, narrow ruts, but Davie's horses kept their "jog" amiably, tossing their heads with glee to be travelling towards home.

The clink of trace-chains, the clack of harness, the glide of runners on the hard, dry snow, the snorting of the frosty-nosed team, the long whirring of startled grouse—Davie only heard these sounds, and heard them dreamily in the long, smooth flights between cahots.

Overhead the pine tops were a dark canopy with little fields of clear blue seen through the rifts of green; on the forest floor small firs bent under rounding weights of snow which often slid off as if moved by the stir of partridge wings; the fine tracery of hemlocks stood clean; and birches smuggled in snow that mingled with their curling rags. Sometimes a breeze eddied downward in the aisles, and then all the undergrowth was a silent commotion of snow, shaken and falling. Davie's eyes noted all things unconsciously; in spite of his pain he felt the enchantment of the winter woods until—another cahot! he called his team to walk.

Never was one cahot without many in succession; he gripped his stake hard at each, braced his sound leg, and held on, feeling like to die with the horrible thrust of the broken one forward and then back; yet always his will ordered his desparate senses.

Eleven o'clock! Davie drew up before the half-breed



Peter Whiteduck's midwood stopping-place, and briefly explained his situation.

"Give my horses a feed," he went on. "There's oats in this bag. I'll no be moved mysel'. Maybe you'll fetch me a tin of tea; I've got my own provisions." So he ate and drank in the zero weather.

"You'll took lil' drink of whiskey," said Peter, with commiseration, as Davie was starting away.

"I don't use it."

"You'll got for need some 'fore you'll see de Widow Green place. Dass twenty-tree mile."

"I will need it then," said Davie, and was away.

Evening had closed in when the bunch of teamsters awaiting supper at Widow Green's rude inn heard sleigh-bells, and soon a shout outside:

"Come out, some one!"

That was an insolence in the teamsters' code. Come out, indeed! The Widow Green, bustling about with fried pork, felt outraged. To be called out!—of her own house!—like a dog!—not she!

"Come out here, somebody!" Davie shouted again.

"G' out and break his head one of you," said fighting Moses Frost. "To be shoutin' like a lord!" Moses was too great a personage to go out and wreak vengeance on an unknown.

Narcisse Larocque went—to thrash anybody would be glory for Narcisse, and he felt sure that Moses would not, in these circumstances, let anybody thrash him.

"What for you shout lak' dat? Call mans hout, hey?"

* From "Between Earth and Sky," by permission of the publisher, William Briggs. Copyrighted, 1897.

said Narcisse. I'll got good mind for broke your head, me!"

"Hi, there, men!" Davie ignored Narcisse as he saw figures through the open door. "Some white man come out. My leg's broke."

Oh, then the up-jumping of big men! Moses, striding forth, ruthlessly shoved Narcisse, who lay and cowered with legs up as a dog trying to placate an angry master. Then Moses carried Davie in as gently as if the young stalwart had been a girl baby, and laid on the widow's one spare bed.

That night Davie slept soundly for four hours, and woke to consciousness that his leg was greatly swollen. He made no moan, but lay in the darkness listening to the heavy breathing of the teamsters on the floor. They could do nothing for him; why should he awaken them? As for pitying himself, Davie could do nothing so fruitless. He fell to plans for getting teams in to Pinnager, for this young Scott's practical mind was horrified at the thought that the man should fail financially when ten horses might give him a fine profit for his winter's work.

Davie was away at dawn, every slight jolt giving his swollen leg pain almost unendurable, as if edges of living bone were grinding together and also tearing cavities in the living flesh; but he must endure it, and well too, for the teamsters had warned him he must meet "strings of loadin'" this day.

The rule of the long one-tracked road into the wilderness is, of course, that empty outgoing sleighs shall turn out for incoming laden ones. Turn out into seven feet of snow! Davie trusted that incoming teamsters would handle his floundering horses, and he set his mind to plan how they might save him from tumbling about on his turned-out sleigh.

About nine o'clock, on a winding road, he called, "Whoa!" and his bays stood. A sleigh piled with baled hay confronted him thirty yards distant. Four others followed closely; the load drawn by the sixth team was hidden by the woodland curve. No teamsters were visible; they must be walking behind the procession; and Davie wasted no strength in shouting. On came the laden teams, till the steam of the leaders mingled with the clouds blown by his bays. At that halt angry teamsters, yelling, ran forward and sprang, one by one, up on their loads, the last to grasp reins being the leading driver.

"Turn out, you fool!" he shouted. Then to his comrades behind, "There's a blamed idyit don't know enough to turn out for loading!"

Davie said nothing. It was not till one angry man was at his horses' heads and two more about to tumble his sleigh aside that he spoke:

"My leg is broke."

"Gah! G'way! A man driving with his leg broke! You're lying! Come, get out and tramp for your horses! It's your back ought to be broke—stoppin' loadin'!"

"My leg is broke," Davie calmly insisted.

"You mean it?"

Davie threw off his blankets.

"Begor, it is broke!" "And him drivin' himself!" "It's a terror!" "Great spunk entirely!" Then the teamsters began planning to clear the way.

That was soon settled by Davie's directions: Tramp down the crust for my horses; on-hitch them; lift my sleigh out on the crust; pass on and set me back on the road."

Half an hour was consumed by the operation—thrice repeated before twelve o'clock. Fortunately Davie came on the last "string" of teams and halted for lunch by the edge of a lake. The teamsters fed and watered his horses, gave him hot tea, and with great admiration saw him start for an afternoon drive of twenty-two miles.

"You'll not likely meet any teams," they said. "The last of the 'loading' that's likely to come in soon is with ourselves."

How Davie got down the hills, up the hills, across the rivers and over the lakes of that terrible afternoon he could never rightly tell.

"I'm thinkin' I was light-heided," he said afterward. "The notion was in me somehow that the Lord was lookin' to me to save Pinnager's bits of children. I'd waken out of it at the cahots—there was mair than enough. On the smooth my head would be strange-like, and I mind but the hinder end of my horses till the moon was high and me stoppit by McGraw's."

During the night at McGraw's his head was cleared by some hours of sound sleep, and next morning he insisted on traveling, though the snow was falling heavily.

"My feyther's place is no more than a bittock ayont twenty-eight miles," he said. "I'll make it by three of the clock, if the Lord's willin', and get the doctor's hands on me. It's my leg I'm thinkin' of savin'. And mind ye, McGraw, you promised me to send in your team to Pinnager."

Perhaps people who have never risen out of bitter poverty will not understand Davie's keen anxiety about Pinnager and Pinnager's children; but the McAndrews and Pinnakers and all their neighbors of "the Scotch settlement" had won up by the tenacious labor and thrift of many years. Davie remembered well how, in his early boyhood, he had often craved more food and covering. Pinnager and his family should not be thrown back into the gulf of poverty if Davie McAndrews' will could save them.

This day his road lay through a country thinly settled, but he could see few cabins through the driving storm. The flagging horses trotted steadily, as if aware that the road would become worse the longer they were on it, but about ten o'clock they inclined to stop where Davie could dimly see a log house and a shed with a team and sleigh standing in it. Drunken yells told him this must be Black Donald Donaldson's notorious tavern; so he chirruped his horses onward.

Ten minutes later yells and sleigh-bells were following him at a furious pace. Davie turned head and shouted; still the drunken men shrieked and came on. He looked for a place to turn out—none! He dared not stop his horses lest the gallopers, now close behind him, should be over him and his low sleigh. Now his team broke into a run at the noises, but the fresh horses behind sped faster. The men were hidden from Davie by their crazed horses. He could not rise to appeal; he could not turn to daunt the horses with his whip; their front hoofs, rising high, were soon within twenty feet of him. Did his horses slacken, the others would be on top of him, kicking and tumbling.

The cahots were numerous; his yells for a halt became so much like screams of agony that he took shame of them, shut his mouth firmly and knew not what to do. Then suddenly his horses swerved into the cross-road to the Scotch settlement, while the drunkards galloped away on the main road, still lashing and yelling. Davie does not know to this day who the men were.

Five hours later, David McAndrews, the elder, kept at home by the snowstorm, heard bells in his lane, and looked curiously out of the sitting room window.

"Losh, Janet!" he said, most deliberately. "I wasna expeckin' Davie; here he's back wi' the bays."

He did not hurry out to meet his fourth son, for he is a man who hates the appearance of haste; but his wife did, and came rushing back through the kitchen.

"It's Davie himsel'! He's back wi' his leg broke; He's come a' the way by his lone!"

"Hoot-toot, woman! Ye're daft!"

"I'm no daft; come and see yersel'. Wae's me, my Davie's like to die! Me daft, indeed! Ye'll need to send Neil straight awa' to the village for Doctor Aberdeen."

And so dour Davie's long drive was past. While his brother carried him in, his will was occupied with the torture, but he had scarcely been laid on his bed when he said, very respecufully—but faintly—to his father:

"You'll be sendin' Neil oot for the doctor, sir? Aye; then I'd be thankfu' if you'd give Aleck leave to tak' the grays and warn the settlement that Pinnager's needin' teams sorely. He's like to make or break; if he gets sax or eight spans in time he's a made man."

That was enough for the men of the Scotch settlement. Pinnager got all the help he needed; and yet he is far from as rich to-day as Davie McAndrews, the great Brazeau River lumberman, who walks a little lame on his left leg.

---

Timber, of Liverpool, Eng., says: We understand that Giles Loder (Ltd.), 36 Lombard street, London, shortly intend to enter the Canadian pine trade, and that their Mr. H. J. Carlisle will leave England early in the year to open up the new business.

We have received from Messrs. Darling Brothers, of Montreal, their 1898 pump catalogue, in which are illustrated and described various classes of steam pumps for special service. A copy of this catalogue may be obtained by any of our readers for the asking.

## WANTS CANADIAN LUMBER.

MR. Mariano Comas, of Buenos Ayres, South America, is at present on a visit to Canada. Mr. Comas represents a large shipping house in his native city, who are desirous of securing supplies of Canadian lumber. Heretofore their connection has been with Boston and New York concerns, but the new tariff of the United States having replaced the former higher duties on products of the Argentine Republic, the government of the latter country have retaliated, and have placed a 10 per cent. preferential tariff in favor of all nations, as against the United States, and so Mr. Comas has started out to look for new markets in which to purchase the lumber supply required by his firm.

## QUEBEC CROWN LANDS.

THE total receipts from Crown lands in the province of Quebec during the year ending June 30th, 1897, according to the report of the Commissioner just to hand, were $878,477.66, a decrease as compared with the previous year. Of this amount $782,303.53 was derived from timber dues, ground rents, bonuses and transfers. The following is a comparative statement of the timber manufactured during the last two years, as compiled from the the report:

| | 1896 | 1897 |
|---|---|---|
| Pine at 26c. per 200 feet | 307,195,7 0 | 286,357,400 feet B.M. |
| Spruce at 13c. per 200 feet | 270,156,80 ) | 276,482,200 " " |
| Small pine logs | 110,650,844 | 95,483,209 " " |
| Boom timber | 417,016 | 67,275 " " |
| White pine timber | 1,443,354 | 430,909 cub. feet. |
| Red pine timber | 3,788 | 32,961 " " |
| Birch, etc. | 40,785 | 27,306 " " |
| Cedar, etc. | 203,193 | 184,603 lin. feet. |
| Firewood | 7,953 | 1,595 cords. |
| Pulpwood | 11,879 | 4,0 5 - " |
| Spoolwood | 5,074 | 1,420 " |
| Railway ties | 300,311 | 108,406 pieces. |
| Lathwood | 109 | 42 cords. |
| Shingles | 3,082 | 6,070 M. |
| Hemlock bark | 202 | 499 cords. |
| Rails | 20,563 | 16,786 pieces. |
| Telegraph poles | 1,550 | 115 " |
| Pickets | 14,877 | 25,174 " |

If the above figures are nearly correct, there has been a considerable curtailment in every class of timber except spruce, which shows a slight increase. We cannot believe, however, that the returns include the whole quantity cut on Crown lands in the province, as the production of pulpwood must greatly exceed 4,000 cords.

## THE OAK AND THE ASH.

THROUGHOUT northern Europe, remarks an English publication, the leaves of the ash are held to be potent against the bite of vipers, and in Devonshire it used to be a common belief that if a circle be traced with an ash staff round a sleeping viper the reptile will be as unable to pass over it as if it had been made with the cactus twigs, so high in favor for a similar purpose in Mexico. Among the old Scandinavians, Yggdrasil, the great ash tree, represented the universe. Under its roots were the land of the frost giants and the land of metals, and under the shadows cast by it the gods were supposed to sit. It has been attempted to explain the love of the Northmen for the ash by imagining that its hardness gave it favor in the eyes of those tough warriors, who used it for so many purposes that Adam, of Bremen, refers to the Vikings of Norway and Denmark as "Ashmen," and Odin is pictured in the Edda as making the first man from a block of ash timber which he found upon the shore. But this does not pluck the heart out of the mystery. It only carries it a little further back, and fails to explain why the minds which evolved that strange northern mythology chose it in preference to the oak, or the linden, or the fir, or the birch, all trees familiar enough to these pre-historic folks. The oak is, indeed, associated with almost as many legends as the ash. The ancient Celts regarded it with such veneration that De Brosses derive the word "kirk," now softened into "church," from "Quercus," an oak. It used, in many parts of England, to be considered unlucky to cut down an oak; and Aubrey, the old Sulley antiquarian, whose works form such a mine of Carolinian legend, tells us that before a tree of this species falls under the woodman's axe "it gives a kind of shreiks or groans that may be heard a mile off, as if it were the genius of oak lamenting."

---

Among the calendars received by the LUMBERMAN is one from T. Sullivan & Co., wholesale dealers in hardwood lumber, of Buffalo. This firm is making a specialty of elm and ash, and make shipments direct from Canadian mills.

# THE RETAILER AND Wood-Worker

## SAW-GRINDING.

THE following suggestions contributed by Mr. Powis Bale, M.E., to the Timber Trades Journal, are presumed to represent the latest English practice :

For many years after the introduction of emery wheels or disks a prejudice existed against their use for sharpening saws ; and, to some extent, this prejudice still survives. It arose chiefly from the fact that many of the wheels made were unsuited to their work, and the user had little knowledge as to the proper management. In the following paper some hints will be given as to their management, which may be found serviceable to users ; and although these remarks relate chiefly to emery wheels for sharpening saws, they can, in most cases, be equally well applied to emery wheels used for other purposes. In the first place, it is important to secure an emery wheel of good quality and of a texture and hardness well suited to the work. This is not so simple a matter as it may at first appear, owing to the quantity of cheap, inferior wheels with which the market is flooded.

For saw-sharpening purposes a moderately soft wheel should be preferred, since it will cut quicker and heat and glaze less than a hard one ; it will, however, wear out a little sooner. Some wheels are harder on their surface than further in, and they do not cut their best until they are worn a little ; but the best class of wheels may be obtained of any required degree of hardness, as it is only necessary to vary the proportions of the compound used in their manufacture. Sometimes a good wheel will be condemned as bad when the fault may arise from its being unsuited to the work it is used for, or it may have been run at an improper speed. In establishments where a variety of work is done it will pay well to have a fair assortment of wheels, and not make one do duty for all kinds of operations. When the wheel is secured, before mounted it should be examined to see that it is perfectly sound. This may be ascertained by tapping it lightly with a hammer ; if sound it will ring. If it does not ring it should be closely examined, and if any cracks or flaws are detected, however slight, the wheel should be discarded, as it would be dangerous to work.

To lessen the chance of accidents from cracks, the manufacturers of some wheels insert in them a web or webs of brass wire, proportioned in strength to the size and weight of the wheel. They claim that the insertion of the wire does not in any way affect the cutting power of the wheel, as it wears away in advance of the emery. The wheel should be mounted so that it fits easily on the spindle, and thus have room to expand should it become warm. Large washers or flanges, say about one-third the diameter of the wheel, should be fitted on either side. These are preferably made slightly concave on their inner side, and a small piece of packing—rubber or leather will do very well—should be placed between them and the wheel. Care must be taken that they are not screwed too tightly, as thin wheels are liable to crack, especially if a little warped, and they are then, of course, exceedingly dangerous. The saw-sharpening machine in which the wheels are run should be well made and substantially built, the main frame being cast in one piece. In the best machines the emery wheel is mounted on a small steel spindle running in bearings or centres fitted in a counterbalanced swinging carriage. This carriage is brought down to the saw by hand, and, by means of a quadrant, can be set at an angle to give any desired lead to tooth ; stops are also fitted to regulate the depth of the gullet and the pitch of the tooth. The counter-shaft is usually placed at the back of the machine, and the band (belt) giving motion to the emery disk passes over an idle pulley and then directly on to small pulley on the emery disk spindle. In the place of single pulleys the writer strongly recommends the use of adjustable pulleys of different sizes, or small cone pulleys, so that as the wheel wears less in diameter its speed can be increased in proportion.

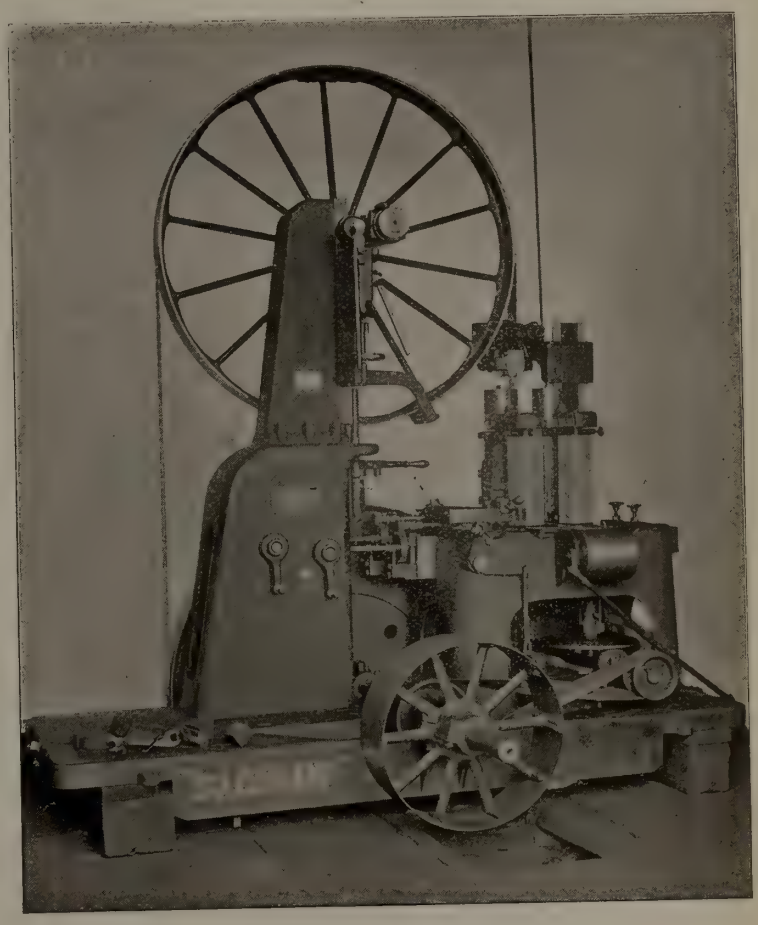
The question of speed is a factor of immense importance in the successful working of emery wheels. The best cutting speed will vary somewhat in wheels of different character; but a speed of from 4,500 feet to 5,500 feet per minute at the periphery of the disk will usually be found suitable. A speed midway between the figures, say 5,000 feet per minute for the 12-inch wheel, which is generally used in sharpening saws, may be accepted as the standard.

## THE SAGINAW BAND RE-SAW.

THE growing scarcity of timber and consequent higher value of stumpage has caused lumber manufacturers to give greater attention to the adoption of such methods and appliances as will reduce the waste in the saw-mill to a minimum and produce the largest quantity of marketable lumber from the log. This condition no doubt accounts in a large measure for the success of the Saginaw band re-saw, an illustration of which appears on this page. The manufacturers thereof operate a large plant at Saginaw, Mich., for the manufacture of lumber and boxes in shooks, sash, doors, blinds, etc. Some time ago the president of the company, Mr. E. C. Mershon, decided to build a machine for their own plant, and subsequently secured a patent therefor and arranged to place it on the market. The large sale which the machine has had has demonstrated the wisdom of this decision.

The Saginaw re-saw has proved very successful when used in connection with band and circular log mills in the United States, where the practice is to saw plank double the thickness required, and then re-saw them on the band re-saw, thus making the re-saw perform half of the work. In Canada the mill is also very popular, the manufacturers having placed resaws in the mills of the following well-known firms : W. C. Edwards & Co., Rockland, Ont.; Estate of Ross Bros., Buckingham, Que.; Estate of James McLaren, Buckingham, Que.; Hawkesbury Lumber Co., Hawkesbury, Ont.; Gilmour & Co., Trenton, Ont.; Georgian Bay Lumber Co., Waubaushene, Ont.

The manufacturers state that they believe the Saginaw resaw to be the first machine designed from a thorough knowledge of the requirements of saw-milling. The feed works, they say, are designed so as to meet every imaginable requirement, whether self-centering or slabbing from one side, whether stock to be re-sawed is perfectly manufactured plank or deal, or thick on one edge and thin on the other, or even a slab or a waney deal. Under any of the above circumstances the feed works will insure the stock being perfectly sawn. The set works is another valuable feature. Referring to the machine, Messrs. W. B. Mershon & Co. say : "We manufacture, including seven or eight styles of the Saginaw re-saw, no less than 14 practically different machines,



THE SAGINAW BAND RE-SAW.

adapted to as many different classes and conditions of work. We also remind you that we are wood-workers and operate eight of our own re-saws and rip saws about our own plant ; hence, we claim that our machines are more practical than those manufactured in the ordinary machine shop. We claim that it will convert over 100,000 feet of 2 inch plank into one inch boards in a day of ten hours. The saw-kerf is but five sixty-fourths of an inch.

Persons desiring further information should communicate with the manufacturers, Messrs. W. B. Mershon & Co., of Saginaw, Mich.

Wm. Williamson, contractor, of Toronto, proposes erecting a wood-working factory.

The Arrowhead Saw and Planing Mills Company, of Arrowhead, B.C., has been incorporated, with a capital of $150,000.

# THE NEWS.

—J. Rochon has opened a lumber yard at Port Arthur, Ont.

—Wm. Sellers is opening a lumber yard at Holmfield, Man.

—Malcolm McDonald is erecting a shingle mill at Duck Lake, Ont.

—C. W. Gimby, lumber, Cartwright, Man., has sold out to R. Stead & Son.

—S. McLeod, saw mill, Prince Albert, N. W. T., has sold out to Keith & Co.

—James Hunter & Son, of Pennfield, N. B., have lately added a shingle machine to their saw mill plant.

—It is announced that the Dickson Company, of Peterboro', a ve decided to build a saw mill at Lakefield.

—The enterprising firm of Knight Bros., Burks Falls, Ont., re building an addition to their planing factory.

—The Cowichan Lumber Company, of Cowichan, B. C., have been granted incorporation by the Dominion government.

—The Gravenhurst council has decided to offer the Longford Lumber Company a free site as an inducement to locate in that town.

—Broadfoot & Box, of Seaforth, Ont., have lately sold $20,000 worth of furniture to Hawke & Co., of 8 Cook street, London, Eng.

—The Rathbun Company, of Deseronto, are building an extension, 114 x 15 ft. and two stories high, in the rear of the joiners' department.

—The saw mill owned by Leopold Benz, of Wetasiwin, Alberta, was totally destroyed by fire recently. Some lumber and logs were burned.

—The cut of the Aberdeen mills, Fredericton, N. B., last season was about fourteen million feet. Clapboards and shingles will be sawn during the winter.

—The Gilmour Co., of Trenton, Ont., have recently shipped large quantities of box shooks and doors to Great Britain, and expect to do a much larger trade next season.

—Haley & Son., of St. Stephen, N.B., have had a much larger saw placed in their mill. They have received from the St. Croix Soap Mfg. Co. a large order for box shooks.

—Gardner Bros., of Leamington, Ont., are making extensive additions to their machinery and plant. They expect to make between 2,000,000 and 3,000,000 berry baskets next year.

—Mr. Alexander Fraser has taken an action in the Superior Court against the Hull Lumber Co. and Buell, Hurdman & Co. for $172,543,52. This was the amount of a mortgage on Table Rock.

—Wakefield & Kellington's planing mill at Neepawa, Man., was considerably scorched by fire recently, which originated in the engine room. The main building was saved. The damage is about $800, with no insurance.

—The saw mill of Ferdinand Bellavance, of Sayabec, Que., was recently destroyed by fire through the imprudence of an employee, who attempted to fill a coal oil lamp with oil while it was burning. The loss is estimated at $3,000.

—John Breakey, lumber merchant, of Quebec, and others, are seeking incorporation as the Chaudiere Valley Railway Company, to construct a railway along the Chaudiere river to Scott's Junction. The capital stock is $150,000.

—The lumber surveyors of St. John, N. B., have decided to form an organization. They say the shortness of the active season renders it necessary that they receive more pay. They will prepare a schedule of rates and submit it to the lumber shippers before spring business opens up.

—Importations of lumber from the United States to Manitoba for the twelve months ending October 1, 1897, were as follows: Dressed, 1,913,832 feet; undressed, 14,857,372 feet. Each year has shown an increase since 1893, when the figures were: Dressed, 136,306 feet; undressed, 1,174,747 feet.

—T. L. Pardo, M. P. P., of Blenheim, Ont., after having the brickwork about the boilers of his extensive mills torn down to rebuild, concluded to replace the old boiler with a first class new one, and has given an order to Trotter & McKeough, of Chatham, for one of their best 4 ft. shell boilers.

—The Department of Trade and Commerce has received two reports from Mr. E. E. Shepherd, Trade Commissioner for South America, in which he deals fully with the question of the possibilities of trade between Canada and Brazil and Uruguay. Last year about $52,000 worth of Canadian lumber was imported into Brazil.

—It is understood that Stetson, Cutler & Co., of New York, Boston and St. John, who are heavy stockholders in the Ashland Manufacturing Co., are negotiating for a lease of the mill at Ashland for a term of years, and if satisfactory arrangements can be made with the railway regarding rates, etc., they will run the mill all the year round.

—The Goderich Lumber Company have purchased the saw mill at Golden Valley from Mr. Brooks. Fred Thompson, late head sawyer in the Goderich saw mill, will probably leave in the near future for the Bruce Peninsula, to take a like situation in the new establishment. The cut of the new mill will be handled by the Goderich Lumber Company.

—From Doaktown, N.B., comes the following news: H. & F. D. Swim are embarking in a large enterprise, viz., the cutting of six hundred thousand superficial feet of spool bars. The Messrs. Swim claim that they have a contract with parties in Scotland, and are starting out to engage in the work. They purpose putting up a mill in the woods on the Muzerall brook and sawing the birch into bars, and then haul the sawn wood to the track and pile it there until spring, when it will be shipped.

—The Department of Interior at Ottawa has taken up the question of lumber supply and forest preservation in the North-West. Mr. E. F. Stephenson, of Winnipeg, has been appointed a commissioner to go into the subject and enquire how the forests should be maintained. Suitable areas for permanent forest reserves will be selected, and it will be ascertained whether some lands in the West poorly adapted for agriculture could not be as well planted with trees. Information will be gathered as to what means are most effective in preventing forest and prairie fires.

—There appears to be a bright future for the Willow Creek Gold Mining and Development Company, which is capitalized at $99,000. Mr. Eldoras Todd, lumberman, of Brantford, Ont., is president and general manager, and we are informed that it is the intention to combine lumbering and mining. The company have erected a large steam saw mill, with a capacity of 60,000 feet in twenty-four hours. It is their intention to run this as a custom mill, and also to saw and manufacture lumber to sell. Rough timber sells for $16 per M feet, and dressed at from $25 to $35 per M feet. Slabs and sawdust will be used for fuel.

—Denmark is said to offer a market for Canadian timber. The total import by that country in 1896 was 19,965,000 cubic feet, most of which was supplied by Norway and Sweden. Oak is in good demand, and is used for furniture, shipbuilding and house building, and should be shipped in planks and boards. Pine is used for ship and house building; poplar for veneering, billboards and furniture, also in the manufacture of pianofortes and carriages. Poplar is also used largely for stoppers to beer kegs, liquor barrels, etc. Maple also has a future in Denmark for veneering and inlaid work. There is no duty on oak imported into Denmark. Other woods pay a duty of 13 oere (3½ cents) per cubic foot.

—Messrs. George St. Pierre & Co., of Fraserville, Que., have over fifty men in the woods, and will next season cut a large quantity of shingles. They are under contract to cut 2,000,000 feet of spruce and birch. Their machinery has lately been improved, and they now have one of the best equipped mills in the province, comprising a 75 h.p. engine, new, built by Carrier, Lane & Co., of Levi, last June, at a cost of $1,200; one rotary, one steel gang saw, one Catharine, one double edger, one planer and matcher, ten Small & Fisher shingle machines, double action steam pumps, etc. The firm cut last summer 2,000,000 feet of spruce, mostly deals for the English markets, besides a few local contracts.

## CASUALTIES.

—A man named Simard was accidentally killed in a lumber shanty near Ste. Felicite, Rimouski county.

—Alphonse Cyr, who ran a nail into his foot while working in Booth's saw mill at Ottawa, died of lockjaw in the hospital.

—George Smith, of Wilberforce, while working in Brennan's shanty on the Petewawa, was crushed by a falling tree. His recovery, at time of last report, was doubtful.

—While running a power sawing machine at Buckingham, Que., Samuel Jamieson was killed by the breaking of the saw, a piece striking him on the head. Deceased was 63 years of age, and had been up-river agent for Ross Bros.' lumber firm for twenty-eight years.

—Napoleon Paquin, an employee of the Rat Portage Lumber Company, was badly injured whilst working in the bush and died the following day. The deceased was a native of St. Andrews, Ottawa county. By an excellent system all employees of the Rat Portage Lumber Company are insured against accidents, and the relatives of the deceased will receive $1,000.

## PERSONAL.

Hon. R. R. Dobell, of Dobell, Beckett & Co., Quebec, returned a fortnight ago from England.

Mr. R. N. Wakefield, lumber merchant, of Seattle, Wash., has returned to Ontario, after an absence of eighteen years. He is visiting at his old home at Battersea.

Mr. Martin Allstadt, of the lumber firm of Allstadt & Mayer, Mannheim, Germany, is at present on the American continent, placing orders for oak, poplar and ash for export.

The LUMBERMAN regrets to learn of the recent illness of Mr. Hugh Grant at Pembroke, Ont. Mr. Grant was for many years a representative of the Hamilton Bros. firm.

Mr. T. H. DeCew, formerly of Essex Centre, but now of Arrowhead, B. C., was recently in Toronto, where he purchased an engine for his saw mill at the latter place.

The death occurred at Liverpool, N.S., last month, of Mr. R. W. Freeman, who had been long connected with lumbering operations on the Liverpool and Port Medway waters.

## TRADE NOTES.

The S. Morgan Smith Co., of York, Pa., has recently shipped to H. Mc. Hart, for his pulp mill near Halifax, N. S., a 36 inch horizontal McCormick turbine on horizontal shaft, which will develop 350 h. p.

The Waterous Engine Company, of Brantford, have completed a new coal conveyor for the Ingersoll Packing Company which carries the coal 110 feet. Two men recently unloaded 87,000 pounds in five and a quarter hours.

The fame of the excellence of the lumbering tools manufactured by Thomas Pink, of Pembroke, Ont., is extending beyond the limit of this continent. Recently Mr. Pink received a large order for his celebrated skidding tongs all the way from Amsterdam, Holland, and enquiries have been received concerning them from even the steppes of Russia.

Referring to the international questions growing out of the seal negotiations with Great Britain and the Cuban situation, the American Monthly Review of Reviews says: "There is nothing that the world respects so much in a nation's attitude and policy as firmness and fixity of purpose. If the people of the United States wish to intervene in Cuban affairs they have the most abundant moral justification for doing so. The only thing that could condemn such a movement on the part of our country would be doubt in our minds as to the wisdom or justice of our policy. American intervention in Cuba at any time within the past year and a half would have been accepted by the whole world with even less of cavil or criticism than the Russian intervention on behalf of Bulgaria twenty years ago."

**WE HAVE PURCHASED THE BIG SAW-MILL OF PACK, WOODS & CO., at Oscoda, Mich.,**

And will offer the entire equipment or any part of it AT LOW PRICES, to save handling and storage. The Mill contains 12 Boilers, 7 Engines, 4 Pumps, 1 Gang, 2 Iron Husks, 2 Carriages, 2 Edgers, 2 Steam Niggers, 2 Trimmers, 1 Slasher, 1 Jacker, 2 Flippers, 2 Twin-Engine Feeds, 1 Refuse Grinder, Filing Room Outfit, Electric Light Plant, Machine Shop, and all Conveyors, Shafting, Pulleys, Belting, etc., required for above machinery.

Send for Complete Stock List of over a thousand machines.

**WICKES BROS., Saginaw, Michigan.**

# WOOD PULP DEPARTMENT

## PULP AND PAPER MAKING IN NOVA SCOTIA.

MANY people will be surprised to learn that as far back as 1837 papermaking was introduced in Halifax by one Robert Keswick, says the Halifax Herald. He located his mill at the foot of a lake just west of Moir's mills, Bedford. The factory was a little old-fashioned one. The inside was arranged in a wonderful way and a sketch of its appearance, were it possible to obtain one, would be a curiosity to the up-to-date people of sixty years later. The power was furnished by a twenty-foot breast wheel, eight feet wide, and one small over shot eight feet in diameter and four feet wide. No steam was used in the mill and the stock was cooked in a large open pot over a fire. It was then loft dried. The paper machine used was a 36-inch one with a fire drier.

Later on this mill was replaced by one a little further down the stream. This happened about thirty years ago. The business was continued after the death of Mr. Keswick by his sons, the latter subsequently selling out to Daniel Hughes and his sons. The mill was run under his direction until 1873, when it was totally destroyed by fire. It was never rebuilt, and thus ended the first attempt at papermaking in Nova Scotia.

About the time of the destruction of the Bedford mill a German named Ellerhausen erected Nova Scotia's first pulp mill on the St. Croix River, between Ellershouse and Newport. The machinery was brought out from Germany and England. In connection with the pulp mill a paper plant was also introduced. The pulp, after passing through the first process, was pumped for a distance of two hundred yards to the paper mill, where the article was completed. After running a short time a fire destroyed the pulp mill. The machinery and water wheels were sold for junk. Later on another mill was started on the same site, but it never was completed, and during the fifteen years it remained idle the plant rotted down.

In 1892 the property was offered for sale. It remained idle for a period of three years, and in 1896 the mills were put in a first-class condition for the manufacture of paper. This has been added to from time to time, and the latest extension comes in the shape of a ground wood mill for consumption only. It is the only paper mill in the provinces.

During the idle time of the mill at St. Croix there was built about 1881 at Mill Village, Queens county, a mechanical mill. This mill was erected largely through the efforts of Emil Vossnack, who was very enthusiastic over the prospective profits. The grinders, eight in number, of five pockets each, taking stones eighteen inches by forty eight inches, of the Voelter screw feed pattern, were built in Halifax. Mr. Lawrence Howlett was general manager. It ran for some time, and was then shut down. Abot 1889 the mill was again started, with John S. Hughes as manager. The second year he was there he put in four new grinders and wet machines; this time two-pocket Scott & Roberts grinders were chosen. The mill is driven by two seventy-two inch wheels under about twenty feet head, and is located on the Port Medway River about one and one-half miles above Mill Village, at Salters Falls. The product is shipped from Port Medway during the winter, while in summer vessels approach nearer to the mill.

We next have the erection of a sulphite fibre mill on the East River, Sheet Harbor, about 1887, under the Partington process of lead lined digesters. This mill was in operation about four years, since which it has been idle, but has lately passed into other hands, who talk of starting it again. The output was about five tons per day.

The next advance in wood pulp grinding was about 1889, when H. McC. Hart put in an improved Voelter three pocket hydraulic feed grinder at his saw-mill at West River, Sheet Harbor, which has only been in operation when the saw-mill was idle. It has been dismantled.

About 1894 really the first start of any magnitude was made in grinding wood pulp in Nova Scotia. About the same time there went into operation two mills—one at Morgan Falls, on the La Have River, the other at Milton, on the Liverpool River. The Morgan Falls mill had three four-pocket grinders, with hydraulic feed, three 72-inch wet machines with Gotham screens, and was driven by two 33-inch Smith & McCormick wheels and one 18-inch Smith Success wheel, under 35 feet head. The production was about 20 tons per day, wet. The plant is now being generally remodelled and improved, and with the machinery added the product will be increased to 30 or 35 tons wet per day. The output is loaded on the Nova Scotia Central Railway and sent to Bridgewater in summer and Lunenburg in winter.

The Milton mill, located five miles above Liverpool, at Deep Brook, began operations with four four-pocket Voelter hydraulic grinders and four 72-inch wet machines with Gotham screens, driven by four 33-inch Smith & McCormick wheels, one 21-inch and one 15-inch Smith Success wheels under thirty-six feet head, with a production of thirty-five or forty tons per day. This is at present being increased to about sixty tons per day wet by the addition of three three-pocket Scott grinders. The output of this mill is sent by steam tram to the shipping point at Liverpool. The pulp from both Morgan Falls and Milton mills is finding a market in England, being shipped by steamer from Halifax.

The brothers, Joseph S. Hughes and John S. Hughes, managers respectively of the Morgan Falls and the Milton mills, are sons of Daniel Hughes, who succeeded Mr. Keswick in the old paper mill near Bedford, and have been identified with the pulp and paper manufacture of Nova Scotia from their earliest days.

## PULP NOTES.

The bill to amend the charter of the Laurentide Pulp Company, recently before the Quebec Legislature, gives it power to manufacture pulp, deal in timber and timber limits, and erect saw mills, dwelling houses, hotels, churches, etc.

Mr. T. R. Allison, who designed the Masterman pulp mill at Chatham, N.B., now owned by the Dominion Pulp Company, has made a proposition to form a company to start a pulp mill in that town if the municipality will give site, known as the Morrison mill property, as a bonus. The Board of Trade of Chatham is now considering the proposal with a view to advising the town council.

The pulp mills at Sault Ste. Marie, Ont., are now being pushed to their utmost capacity, with improved machinery lately put in which reduces material to dry pulp. The demand has been exceedingly lively. The English trade, it is said, will take every pound that can be manufactured during the next six months.

There has been some delay in getting the Petewawa Pulp and Paper Company, which obtained its charter at the last session of the Ontario Legislature, into active operation. It is now stated, however, that Mr. A. T. Mohr, of Buffalo, whose persistency in the matter is born of unbounded confidence in the project, has been rewarded, and that building operations at Petewawa, Ont., will be commenced in the spring.

Mr. J. D. Guay, of the Chicoutimi Pulp Company, says: The company's mill at Chicoutimi, Que., upon which $110,000 has already been expended, will shortly be opened. The company's limits are 500 miles in area, and the first eighteen months' output of pulp has already been sold. In order to turn out the required amount 80 men will be constantly employed, so that between the mill and the dairy industry, which does an annual business of half a million dollars, the population of Chicoutimi will be kept pretty well employed.

The Halifax Chronicle sounds a note of warning in regard to the pulp wood resources of Nova Scotia. The province, it points out, has many tracts covered with the right kind of timber for the manufacture of mechanical and chemical pulp. These the Chronicle advises the owners to husband and foster. It urges that the cutting of the trees be kept under control, that the small ones be preserved, and that due measures for fire protection be taken. In this way, it adds, the necessity for reforesting, to which so many parts of the continent have come, will be avoided.

German experiments prove that the slower the growth of the tree the greater is the strength of its pulp. Norwegian is said to be better than Swedish, and, strange to say, it is claimed that German is better than either. Canadian timber, also, it is asserted, grows too rapidly to make the best pulp. The first statement is obvious, but is it really true that German pulp is the best? I think that the great attention and diligent study given by Germans to chemical science are sure to have some effect upon their manufactures. As far as raw material goes the rapidity of growth must bear a strong part in the pulp produced.—Paper Making.

HERCULES BELTING The BEST in the World....
WEARS LONGER and WORKS BETTER than any other Belting on the Market.
HERCULES BELTING is constructed on a scientific plan. The Duck used is Extra Fine, costing nearly twice as much as that used in any other Rubber Belting. Every inch of it is frictioned with good rubber (not shoddy). Drop a postal card for list and discounts to.....

## TO ESTABLISH FOREST RESERVES.

A BILL which, if adopted, will have an important bearing upon the future timber supply of Ontario has been prepared by Mr. Thomas Southworth, Clerk of Forestry, and received its first reading in the Legislature. It is entitled "The Forest Reserves Act," and provides as follows :

1. The Lieutenant-Governor in Council shall have power to set apart from time to time such portions of the public domain as may be deemed advisable for the purposes of future timber supplies.

2. Such tracts of land so reserved shall be declared to be permanent Crown Timber Reserves.

3. From and after the date of such proclamation no lands within the boundaries of such reserves shall be sold, leased or otherwise diposed of, and no person shall locate, settle upon, use or occupy any such lands, or hunt, fish, shoot, trap or spear or carry or use fire arms or explosives within or upon such reserves.

4. Such reserves shall be under the control and management of the Department of Crown Lands, and the Lieutenant-Governor in Council shall have power to frame regulations for the protection, care and management of the said Crown Forest Reserves.

## SPRUCE LOGS FOR FRANCE.

Mr. J. Fraser Gregory, of St. John, N.B., is purchasing large quantities of spruce logs and pulpwood for export to France, the customs regulations of that country being such that it is believed that they can be imported there and manufactured at a profit. Pulpwood of one fathom in length is admitted free of duty, and there is a saving of three dollars per standard in duties in importing logs instead of deals. The logs will be sawn into building materials in mills now erected in France, and which up to this time have received all their supplies from the Baltic.

---

A new pulp mill is likely to be erected at Grand Falls, N. B. United States Senator Proctor is the chief promoter.

Thomas Petes was killed in Steinhoff & Gordon's stave mill at Wallaceburg, Ont., on the 20th ultimo, by being caught in a shaft.

A neat calendar has been received from the Magnolia Metal Company, of New York, manufacturers of the well-known anti-friction metal.

## OBITUARY.

The death is announced of Samuel McAdams, who carried on business as shingle manufacturer at South River, Ont., for several years.

Mr. Martin L. Russell, of Renfrew, Ont., died on Saturday, December 11th, in his 69th year. Mr. Russell was a well-known lumberman of the Ottawa valley, having been connected with the business for over 40 years. He was a jobber in logs, and also owned a saw mill. He left an estate valued at $100,000, including timber limits on Sturgeon river.

Mr. Henry Ward Powis, timber merchant, of London, Eng., was found dead on the street last month, and the inquest led to the conviction that he had committed suicide, due to outside speculation. Deceased was well known in Canada, and from 1867 to 1877 was connected with the saw-mill business of G. B. Hall, of Quebec. In the latter year he removed to London, and started business on his own account as a wood broker. Very shortly afterwards he formed a limited company, known as Bryant, Powis & Bryant, Limited, and did a very successful business for a time, but unfortunate circcmstances compelled them to go into liquidation in 1892. Since that time he has carried on business under his own name at 110 Leadenhall street, E.C., being known as one of the largest operators in Canadian pine in the United Kingdom. The trade both in Canada and abroad will regret his untimely death.

## NEWS AND NOTES.

A movement is on foot in the vicinity of Louise, Ont., to give financial assistance to Messrs. S. B. Wilson & Sons towards re-building their saw-mill, recently burned.

The Pacific Coast Lumber Co. will shortly commence a new branch of business at New Westminster, B.C., in manufacturing grained wood by a new process.

Mr. D. K. McLaren, dealer in leather and hair belting and mill supplies, Montreal, has issued a neat and pretty calendar to his customers. Any person desiring one should drop a postal card to Mr. McLaren, who will gladly favor them.

The annual meeting of the Madawaska Improvement Company was held in Ottawa a fortnight ago. Officers were elected as follows: President, Mr. J. R. Booth; Secretary, Mr. G. B. Greene; Directors, Messrs. John R. Booth, Andrew Fraser, H. F. McLachlin, Claude McLachlin and C. B. Cole. During the past three years the number of logs brought down the Madawaska has decreased by over twenty-five per cent. The limits are thinning out and in a few years more there will be very few logs.

The St. John Trading Campany is a new company recently formed, and now seeking a Dominion charter, with head office in Ottawa, and a capital stock of $40,000. It is proposed to deal in timber limits and do a general lumber manufacturing business. The members thereof are: John Connor, St. John, N.B.; William Richards, Boiestown, N. B.; William T. Drysdale, Woodstock, N.B.; Hon. John Costigan, Ottawa; F. P. Killeen, New York; F. A. Reed, New York; Edward A. Greene, New York.

## ANTIQUITY OF THE SAW.

Pliny says that the saw was first invented by Daedalus, but according to Apollodorus, it was the invention of Talus, who used the jawbone of a crocodile to cut through a piece of wood, and then made an iron instrument in imitation of it. The saw is represented on the monuments of Egypt, from 2,500 to 3,000 years B. C. As early as A.D. 1327 sawmills driven by water power were in operation at Augsburg, and it is believed before this they were in operation in Paris, driven by the current of the Seine. The first sawmill erected in the Norway pineries was in 1530. Sawmills were numerous in Italy in the sixteenth century. They were not introduced into England until 1663, when a native of Holland built one, but was compelled to abandon it by opposition of the populace, carpenters and other artisans who saw no good in such a new fangled contrivance.

Ingenuity is working wonders in the manipulation of timber. Recently a western sawmiller has developed a simple and efficacious device for washing his logs free from sand and mud before they go to the saws. The device is simply a combination of perforated pipes, beneath which the logs pass on their way out of the pond. The pipes shower forced streams of water upon the logs, freeing them from grit, and when they reach the saws the logs are sawn with far less wear and tear to teeth of blades than is possible with unwashed logs.

WHY BAND SAWS BREAK

SIXTEEN REASONS,

AND HOW TO AVOID THEM

Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a history of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, **ONE DOLLAR.**

## SPECIMEN OF CANADIAN DEALS.

CANADIAN pine deals have, for many years, been favorably known in foreign markets, and especially in Great Britain, to which country immense quantities have been exported annually. Nowhere in the world are deals manufactured which surpass, either in quality or dimensions, those produced in the Ottawa Valley. From a photograph sent us by Messrs. Gilmour & Hughson, Limited, of Hull, we reproduce the accompanying illustration, showing a pile of deals manufactured by this company, and which stand as proof of the huge timber and modern saw mills to be found in Canada.

These deals were manufactured at the steam saw mill of the above company at Hull, and were selected from those sawn only since September. They are all first quality, three inch, and, as will be observed by the figures thereon, range in width from 25 to 41 inches, giving an average width of 30 inches. They were manufactured from timber cut on the firm's limits on the Gatineau river, and make one of the finest piles of lumber ever seen in Canada.

SPECIMEN OF CANADIAN DEALS—MANUFACTURED BY MESSRS. GILMOUR & HUGHSON.

When we consider the size and quality of timber required to yield such deals, bearing in mind that they are all from the sides of logs, and square edged, then only can we properly appreciate their excellence and the value of our timber wealth. Only modern machinery of the highest type would manufacture such. The band mill that cuts them, the chain that hauls the logs into the mill, the double edger that edges them, and, in fact, the whole mill equipment, must of necessity be massive in character and of modern design. That such mills are found in Canada speaks well for the enterprise of the lumbermen of this country.

The proof of the excellence of a saw mill is the manner in which its product is turned out. The writer can say positively from experience and from personal knowledge of both Canadian and Michigan saw mills, that the Canadian lumber is far superior to the product of United States mills in every point of manufacture. Neither can it be gainsaid that nowhere on the continent do they build as good saw mills as in Canada, nor of as great capacity.

---

The B. C. Mine at Greenwood, B. C., has ordered a complete development plant from the Jenckes Machine Co., Sherbrooke, Que.

## AN IMPORTANT SHINGLE CASE.

AN important case, establishing a precedent in the fulfillment of shingle contracts, was recently decided by a jury in Judge Benson's court, Seattle, Wash., and is reported by the Pacific Lumber Trade Journal. Briefly stated, Roy & Roy, wholesalers, on May 29 gave Ferguson & Taylor, shingle manufacturers of Blaine, an order for 20 car loads of shingles, consisting of 16 inch 6 to 2 Extra *A*'s at 95 cents, 16 inch 5 to 2 "Clears" at $1.10, 16 inch 5 to 2 Standard A's at 50 cents, 16 inch Choice A's at 50 cents, fancy butt dimension shingles at 90 cents per 1,000 extra, and some plain butt dimension shingles at 45 cents per 1,000 extra. Prior to June 25 the defendants delivered five cars of the contract. At that time the price had advanced to $1.10 for *A*'s. Ferguson & Taylor then asked to be relieved from filling the balance of the order. This Roy & Roy refused to do, but would allow the manufacturers to fill the entire order with *A*'s at $1.00 per 1,000. This was agreed to, but after filling one more car the manufacturers again refused to go ahead. Roy & Roy then went on the market and bought enough *A*'s to fill the order, paying therefore $1.35 per $1,000. The latter then brought suit against Ferguson & Taylor for $900, and the case was tried before a jury.

In substance Ferguson & Taylor alleged that the term "immediate delivery" meant within a reasonable time, which was, according to the capacity of the mill of the defendants, 10 days, and that on or about the 10th day of June shingles had advanced not more than 5 cents per 1,000, and that the defendants were entitled to about $50 underweights on the cars already delivered, which would about off-set the claim of the plaintiffs; that the contract of sale was modified and changed the conversation of June 25, and that the plaintiffs had not sued upon the modified contract but on the original one, and therefore should fail; that the defendants should have judgment against the plaintiffs for $50 for underweights on the cars delivered.

On the trial of the case two disinterested witnesses swore that shingles had advanced during the month of July to about $1.25 for *A*'s and other grades in proportion, and two disinterested witnesses swore, on behalf of the defendants, that shingles had advanced for the month of July not more than $1.07½.

The jury returned a verdict allowing the plaintiffs $500 damages, and the defendants $31.50 for underweights, and gave a verdict against the defendants for $468.50.

Without going into the merits of the case, it may be stated that should the verdict be sustained, it will do much to lessen an evil that has threatened the shingle industry the past four years. A number of mill men—happily few—have in the past taken contracts at a fixed price and refused to fill same when the price advanced. The same applies equally to a number of wholesalers. It has been the custom of a number of eastern buyers of late to place orders for a number of cars at a fixed price, and then when the market declined simply cancel the orders without any explanation or upon the most frivolous pretexts. It is wrong and unjust in either case and the practice should be frowned upon. The decision will do much to prevent the mill men from accepting contracts at low prices during the winter months at a stated price for future delivery, and it will also make eastern buyers chary of cancelling orders when the market declines.

---

## USEFUL AND UP-TO-DATE.

Mr. W. H. Smyth, Midland, Ont., in renewing his subscription, writes: "I consider THE CANADA LUMBERMAN a very useful and up-to-date paper.

---

Cassidy & Co. have leased the saw mill of the Burrard Inlet Red Cedar Lumber Co., at Port Moody, B.C.

# 1897

## Review of the Lumber Trade of the Year.

### GENERAL SURVEY.

In some respects the year 1897 marks one of the most important periods in the history of the lumber trade. Viewed from a Dominion standpoint, there is evidence that, notwithstanding trade obstacles and uncertainties, a steady advancement has been made. New markets have been found, and the foundation laid in new fields of what promises in early years to become an extensive and profitable business. That the year was not satisfactory in every respect cannot be disputed.

There was reason to expect, early in the spring, that trade with the United States would show a considerable expansion, and that prices would improve. The disturbance caused by the Presidential election had become settled, and with the resulting general improvement in business, a heavy consumption of lumber by the United States was looked for. But the industrial establishments had felt the depression seriously, and were not disposed to contract too heavily in advance of requirements until the stability of the much-talked-of improvement was thoroughly tested. The demand for lumber continued fair until the summer months, when there was a sharp falling off. At that time indications pointed to the imposition by the McKinley government of a duty on lumber, and Canadian manufacturers, to avoid payment of the duty, shipped large quantities of stock to the Eastern States, to be piled in yards until it could be marketed. The expected happened, and before the close of the month of July the Dingley bill had become law, imposing a two-dollar duty on lumber. For the balance of the year the shipments to the United States market were of little account. Excellent crops in the Western States created an active demand for lumber, and this provided an outlet for much stock which would otherwise have been thrown upon the eastern states. In turn the eastern market improved, and stocks of Canadian lumber were well consumed before the close of the year. But storage and commission charges and other expenses had wiped out much of the profit to the Canadian manufacturer. It will thus be seen that the United States trade was not altogether satisfactory.

To the extent that the United States trade was curtailed, the European demand widened. Increased shipments were made from Ontario, Quebec, New Brunswick and Nova Scotia, and where deals a few years ago included almost the total export, large quantities of thin lumber were exported in 1897 to Great Britain, France, Spain, Australia, China, Japan, and other countries. This trade is referred to in detail in the review of the provinces following. The bulk of the foreign shipments were sold at good prices. This cannot be said of the United States and local trade. Prices during the year were low, and profits to manufacturers less than was hoped for.

Only one important sale of timber limits was held by the Ontario government during the year. Some 150 miles in northwestern Ontario were sold at fair prices. Perhaps the most important feature of the year was the passing of an act by this government compelling the manufacture of timber within the province.

The outlook for 1898 is not altogether promising. There are gleams of sunshine and clouds of darkness. A better feeling seems to exist among the lumber trade generally, based largely upon improved local conditions, decreased production, and the expansion of foreign business, whereby our manufacturers will be less dependent upon the United States.

### ONTARIO.

The conditions surrounding the manufacture of lumber in Ontario were not favorable to a profitable business. The production of logs last winter in the Ottawa and Georgian Bay districts, the two pine centres of the province, was greater than in the previous season. Many manufactmrers looked forward to a good year's trade, but it soon became evident that the United States market was to be partially closed by a two dollar duty. This was the means of reducing the cut by Georgian Bay manufacturers, who are largely dependent upon the United States market. The Ottawa Valley manufacturers were less seriously affected, having disposed of a large portion of their output in the fall of 1896 to representatives of British houses. As will be observed by the figures given below, the production of the Ottawa valley exceeded that of the previous season by 114,000,000 feet.

So far as western Ontario is concerned, pine manufacturers done business on a smaller margin of profit than in 1896. Low grade lumber was difficult to dispose of even before the duty was imposed, and since then there has been little demand from the United States for anything but high class stock, for which a market can always be found. The local trade has shown a gradual improvement, but collections during the year were slow.

In the Georgian Bay section many mill owners are turning their attention to the manufacture of deals for the British market, and their experience during the past season in this direction is said to have been very satisfactory. Pine stocks at the mills are not excessive, although quite ample and consisting chiefly of the lower grades.

The hardwoods were not affected by the duty to the same extent as pine. Birch and basswood were dull of sale early in the year, but improved towards the fall. Ash, elm and oak advanced in price to the extent of the duty, and dry stocks were well sold out before the close of the year. Some complaint is heard that present prices do not leave an ample margin of profit for the manufacturer. An instance of this may be found in the case of hemlock, which sold throughout western Ontario at $6 per thousand feet.

Very few shingles were manufactured last year, and a strong demand late in the season resulted in a scarcity of stock. There is likely to be an increased production in 1898.

The cut of several mills it western Ontario is given below. These figures are not intended to represent the total production of the district, as up to the time of going to press the particulars of the cut of a number of mills had not come to hand :

| W. A. Gillespie, Bracebridge | 750,000 |

The mills of several of the largest companies were not operated last year. Among these might be mentioned the Parry Sound Lumber Company; Cook Bros., Cooks Mills ; Conger Lumber Company, Parry Sound ; Longford Lumber Co., Longford Mills; J. & T. Conlon, Little Current, and the Dickson Company, Peterboro'. The output of Chew Bros.' mills at Midland was 15,000,000 feet of lumber, 4,000,000 lath and 3,000,000 shingles. This was cut under contract for Loveland, Roys & White, Chas. Newton & Sons and Wm. Laking. James Playfair & Company's mill at same place manufactured for Arthur Hill & Co. The C. Beck Mfg. Company, of Penetanguishene, operated their mill only for a short time, sawing about one million feet.

The lumber production of the Ottawa valley in 1897 was 728,000,000 feet, against 614,000,000 feet in 1896 and 627,000,000 feet in 1895. The individual cuts for two years appear below.

OTTAWA VALLEY PRODUCTION.

| | 1896—Feet. | 1897—Feet. |
|---|---|---|
| J. R. Booth, Ottawa | 115,00,000 | 130,000,000 |
| Gilmour & Co., Canoe Lake | ..... | 55,000,000 |
| Hull Lumber Co | 55,000,000 | 60,000,000 |
| McLachlin Bros., Arnprior | 54,000,000 | 70,000,000 |
| Bronsons & Weston Co., Ottawa | 52,000,000 | 50,000,000 |
| Hawkesbury Lumber Co | 52,000,000 | 55,0000,00 |
| W. C. Edwards & Co., Rockland | 43,000,000 | 50,000,000 |
| St. Anthony Lumber Co., Whitney | 40,000,000 | 70,000,000 |
| Gillies Bros., Braeside | 35,000,000 | 50,000,000 |
| Gilmour & Hughson, Hull | 30,000,000 | 40,000,000 |
| Shepherd & Morse Co., New Edinburgh | 25,000,000 | 18,000,000 |
| Canada Lumber Co., Carleton Place | 20,000,000 | 12,000,000 |
| R. &. W. Conroy, Deschenes Mills | 16,000,000 | 12,000,000 |
| Wm. Mason & Son, Ottawa | 15,000,000 | 12,000,000 |
| Pembroke Lumber Co | 12,000,000 | 15,000,000 |
| Ottawa Lumber Co., Calumet | 12,000,000 | 11,000,000 |
| Ross Bros., Buckingham | 11,000,000 | ..... |
| McLaren Estate, Buckingham | 10,000,000 | 12,000,000 |
| R. H. Klock & Co., Aylmer | 8,000,000 | 14,000,000 |
| J. R. & J. Gillies, Arnprior | 3,500,000 | 3,000,000 |
| A. Hagar & Co., Plantaganet | 3,250,000 | 5,000,000 |
| A. & P. White, Pembroke | 2,500,000 | 4,000,000 |
| Total | 614,250,000 | 728,000,000 |

It will be observed that in the estimate for last year a cut of 55,000,000 feet is credited to Gilmour & Co., of Canoe Lake, while their cut of 1896, which was somewhat smaller, is not taken into consideration. This, and increased cuts by the St. Anthony Lumber Co., J. R. Booth, Mc-

Lachlin Bros., and one or two others, account for the increased production.

The export of forest products from the consular district of Ottawa to the United States, as furnished by the United States Consulate General, shows a gain over 1896 of about $500,000. The detailed figures for three years are as follows :

EXPORTS FROM OTTAWA CONSULAR DISTRICT FOR YEAR ENDING DECEMBER 31, 1895.

Grand Total, 1895 ..... $2,460,352.23
" " 1896 ..... 2,170,990 80
" " 1897 ..... 2,560,550.83

It will be observed that for the quarter ending June 30th, 1897, lumber was exported to the United States to the value of $1,334,069.79. This is the heaviest quarter's shipments on record, and was induced by the approaching import duty on lumber.

Work in the woods this winter in the Georgian Bay district is being carried on moderately. Canadian firms are operating in a limited manner, but any falling off in this direction is counterbalanced by the extensive operations of Michigan firms. In the Ottawa valley a slight curtailment of the log input is reported.

## QUEBEC.

The export trade from the province of Quebec was exceedingly active up to September. Then an advance in freight rates and a weakening of the British market checked shipments to some extent. Those who rushed their goods forward early in the season were the more fortunate, and closed the year with large profits. Others have had a fairly successful season, but have suffered somewhat from the immense production of spruce deals by the maritime provinces. As a result of heavy stocks shipped to South America in late years, that country took very little lumber in 1897. From the port of Montreal there were shipped to the River Platte only 417,505 feet, a decrease of 7,372,661 feet as compared with the previous year. There are indications, however, that this market will revive in the near future, provided the policy of restricting shipments is adhered to. The exports from Quebec ports were chiefly to Great Britain, which continues to consume an increasing quantity of pine and spruce deals. Manufacturers who cater to the United States trade report an unsatisfactory year. The margin of profit was small, and stock sold after the imposition of the duty was, in a measure, sacrificed.

From the port of Montreal the exports show a gain over the previous year of over 100,000,000 feet, the total being 320,802,733 feet, valued at $5,272,164. Much of this was the production of the Ottawa valley. The following table shows the exports of timber made by the principal shippers from the port of Montreal for the season 1897, with a comparison with the previous year :

| | 1897—Feet. | 189'—Feet. |
|---|---|---|
| Dobell, Beckett & Co | 98,000,000 | 54,000,000 |
| W. &. J. Sharples | 56,829,640 | 44,869,840 |
| R. Cox & Co | 38,125,185 | 26,117,300 |
| J. Burstall & Co | 36,319,608 | 24,521,007 |
| McArthur Bros | 32,786,506 | 19,192,515 |
| Watson & Todd | 30,359,130 | 25,642,000 |
| E. H. Lemay | 8,000,000 | 4,932,000 |
| Sundry shippers | | 21,828,927 |
| Total | 300,420,069 | 221,003,609 |

The figures below give the quantity and value, in detail, of timber, deals and sawn lumber, etc., exported from Montreal during the season of navigation ending 30th November, 1897 :

SHIPMENTS FROM PORT OF MONTREAL, 1897.

| Description. | Quantity. | Value. |
|---|---|---|
| Battens | | $ 2,784 |
| Deals, pine, standard hundreds | 70,569 | 3,478,843 |
| Deals, spruce and other, standard hundreds | 13,683 | 432,148 |
| Deal ends, standard hundreds | 7,157 | 353,346 |
| Palings, standard hundreds | 30,502 | 590 |
| Planks and boards, million feet | 35,510,726 | 739,031 |
| Scantlings, million feet | 289,190 | 6,676 |
| Staves, etc | | 34,004 |
| All other lumber | | 51,884 |
| Timber, sq. ash, tons | 1,787 | 16,920 |
| " sq. birch, tons | 5,801 | 55,951 |
| " sq. elm, tons | 1,808 | 18,507 |
| " sq. maple, tons | 97 | 1,111 |
| " sq. oak, tons | 395 | 5,781 |
| " sq. white pine, tons | 4,460 | 57,723 |
| All other, tons | 643 | 26,865 |
| Total | | $5,272,164 |

The following statement shows the quantity, in standard hundreds, and value of wood exported from the ports named :

| PORTS. | ARTICLES. | QUANTITY. | VALUE. |
|---|---|---|---|
| Three Rivers and Bastican | Pine Deals | 2,065 Std. H | $123,940 |
| | Spruce Deals | 3,122 " | 105,905 |
| | Deal Ends | 122 " | 4,638 |
| | Planks, Boards, Etc. | 15,837 M. ft. | 149,429 |
| | Pulp Wood Spruce | 51,922 " | 193 482 |
| | Other Headings | | 5,419 |
| | | Total value | $582,813 |
| Sorel | Pine Deals | 154 Std. H | $ 6,327 |
| | Spruce Deals | 3,502 " | 108,532 |
| | Planks, Boards, Etc. | 2,280 " | 20,005 |
| | | Total value | $134,864 |

The timber trade of Quebec is reviewed by J. Bell Forsyth's annual circular, which is now recognized as an authority on the subject :

The business of the port has shown a marked increase in the shipment of timber over recent years, and spruce deals have been heavily exported. The shipment of pine deals from Montreal, which is largely in the hands of Quebec houses, has been unprecedented in extent. Continued dullness in the United States market, with the imposition of a tariff duty by that country on sawn wood goods, has induced increased shipments of boards and sidings, both pine and spruce, to the United Kingdom.

Prices have been well maintained, except in spruce deals, which have fallen heavily in value in the United Kingdom, owing to excessive shipments from the maritime provinces. Producers of Ottawa and other pine deals should give timely consideration to the lesson, and by keeping manufacture within limits, prevent a similar result in their goods.

A comparative statement for three years of the timber measured and culled by the Supervisor of Cullers at Quebec is as follows :

| | 1895. Cubic Ft. | 1896. Cubic Ft. | 1897. Cubic Ft. |
|---|---|---|---|
| Waney white pine | 3,086,469 | 2,870,879 | 4,311,340 |
| Square white pine | 273,771 | 316,093 | 832,589 |
| Red pine | 108,601 | 50,609 | 211,217 |
| Oak | 1,006,139 | 1,139,155 | 1,448,960 |
| Elm | 596,137 | 416,625 | 666,577 |
| Ash | 149,077 | 83,749 | 132,435 |
| Birch | 240,818 | 252,424 | 262,297 |

WHITE PINE.—With a larger supply and heavier shipment, the stock shows some increase over the unprecedently light one of last winter, but is by no means excessive and is largely in merchants' hands. The production of waney pine will be considerably under that of last year, and a marked improvement in the United States would at any time cut off the Michigan supply.

| | | Supply. | Export. | Stock. |
|---|---|---|---|---|
| 1897 | Square | 832,589 | 3,733,040 | 482,849 Square. |
| | Waney | 4,311,340 | | 2,288,249 Waney. |
| 1896 | Square | 316,093 | 4,251,800 | 537,013 Square. |
| | Waney | 2,870,879 | | 1,474,168 Waney. |

RED PINE.—The stock is sufficient for reduced requirements of trade, and little is being made, as the price is too low to induce manufacture, and the demand is only for superior wood, which is scarce.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1897 | 211,217 | 168,760 | 183,552 |
| 1896 | 50,609 | 139,160 | 82,069 |

OAK.—Shipments have been very heavy as compared with recent years. The stock is not excessive for business on a similar scale, as production will be diminished.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1897 | 1,448,960 | 1,412,200 | 694,111 |
| 1896 | 1,145,564 | 1,382,880 | 637,348 |

ELM has been in good demand all the season, but the difficulty of securing suitable wood will prevent an over-supply, and eventually bring about a scarcity.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1897 | 662,577 | 587,080 | 163,835 |
| 1896 | 416,625 | 501,000 | 78,374 |

ASH seems not wanted in the United Kingdom, and stock is probably more than ample for next season's requirements. Even large average wood of first-class quality and good white color is sold with difficulty.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1897 | 132,435 | 76,200 | 93,766 |
| 1896 | 83,749 | 113,680 | 42,694 |

BIRCH is not in demand, as cheap African mahogany has to some considerable extent taken its place. Manufacturers should restrict production, especially of short wood under ten feet long.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1897 | 262,297 | 214,080 | 24,712 |
| 1896 | 251,430 | 319,200 | 9,470 |

PINE DEALS.—Quebec business is small and quite secondary to the heavy and increasing one carried on in Montreal by Quebec houses. Twelve months back it seemed that the prompt completion of short rail connection through Hawkesbury with the Ottawa district might bring a large portion of the business this way. The delay, in all probability, has been finally fatal to the realization of these hopes.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1897 | 601,864 | 49,716 | 168,885 |
| 1896 | 657,264 | 400,343 | 142,410 |

SPRUCE DEALS are in a most unsatisfactory condition, and unless the excessive increase of production, especially in the maritime provinces, is curtailed and brought within previous bounds, there can be no improvement.

The business in pulp-wood continues to increase, but business in sawn spruce lumber with the United States is restricted by the recently imposed duty.

| | Supply. | Export. | Stock. |
|---|---|---|---|
| 1897 | 3,049,322 | 1,738,107 | 1,071,313 |
| 1896 | 3,915,455 | 3,828,258 | 573,413 |

SAWN LUMBER.—There has been very little demand for spruce for River Platte. Towards the end of the season owing to the light shipments a few cargoes were sold at a slight advance on last year's prices, and the stock wintering being very short as compared with former years, an improvement is looked for next season.

FREIGHTS have followed the same course as last year, though the advance towards end of season came earlier, and was more marked, ton-

nage at one time in the Fall being scarcely obtainable even at extreme rates. Sail for Quebec loading at seventeen shillings for Clyde, and nineteen shillings for Liverpool throughout season. Deal freights by steam for Montreal loading to leading ports in the United Kingdom opened at forty shillings, and from early September till close of season were unsettled at advanced and at times at extreme figures.

COMPARATIVE STATEMENT OF SAILING VESSELS CLEARED AT THE PORT OF QUEBEC, FOR SEA (LUMBER LADEN), 1882 TO 1897, FROM THE OPENING TO THE CLOSE OF NAVIGATION.

| | Vessels. | Tons. | | Vessels. | Tons |
|---|---|---|---|---|---|
| 1882 | 426 | 359,025 | 1890 | 250 | 238,162 |
| 1883 | 487 | 416,169 | 1891 | 205 | 182,615 |
| 1884 | 366 | 291,398 | 1892 | 244 | 225,008 |
| 1885 | 369 | 294,789 | 1893 | 177 | 146,970 |
| 1886 | 325 | 250,635 | 1894 | 136 | 115,639 |
| 1887 | 271 | 206,172 | 1895 | 86 | 70,960 |
| 1888 | 227 | 195,928 | 1896 | 103 | 82,622 |
| 1889 | 275 | 240,892 | 1897 | 99 | 84,233 |

For the year ending 1st November, 1897, there were brought to Quebec by the Quebec and Lake St. John Railway, 3,406 cars of deals and lumber, 299 cars pulp, 389 cars ties, 2,235 cars cordwood, 158 cars square timber and 576 cars pulp-wood.

## THE MARITIME PROVINCES.

Manufacturers in New Brunswick and Nova Scotia entered upon the year's business with promising prospects. The winter of 1896-97 was one of the most favorable on record for getting logs out of the woods, and the large cut which had been induced by the improved outlook for foreign trade reached the mills with little difficulty at a slightly earlier date than usual. The result was a very heavy production of lumber. Spruce, the chief lumber manufactured in these provinces, was exported extensively to the British market, owing to the depression that existed in the United States. The result was that later in the season the markets of the United Kingdom became overstocked, and prices suddenly collapsed. Early shipments of New Brunswick spruce deals sold in the British markets at £7 per standard c.i.f. During the summer prices dropped to £6 10s. to £6 15s., and late fall shipments only realized £5 15s. to £6 per standard. Nova Scotia deals brought prices slightly below those manufactured in New Brunswick. Local prices, of course, were governed by the foreign demand, and weakened accordingly, until late in the fall quotations at St. John and other leading ports were nominal, and shipments were confined to contract requirements. The result of this was that large stocks of lumber which were intended to be marketed in 1897 were held over for spring shipment.

The import duty on lumber practically closed the United States market, and the shipments to that country after August 1st were of little account. A few cargoes of laths were sold at very low prices. Dullness prevailed in the shingle trade, and some of the mills ceased manufacturing before the close of the season.

Manufacturers report that, taken as a whole, the year's business was more profitable than that of 1896. The demand from South America and the West Indies assisted in placing the balance on the right side of the ledger. Large quantities were exported to these countries from Nova Scotia, while increased shipments were also made to France and Spain. In point of volume the lumber trade of the maritime provinces exceeds all previous records. The exports of spruce from all ports, excepting Miramichi, Richibucto and Sackville, show a marked increase. Interesting statistics will be found below. The total shipments from New Brunswick were enormously large. These figures represent the exports for four years :

| | Feet. |
|---|---|
| 1894 | 322,170,039 |
| 1895 | 302,126,536 |
| 1896 | 367,438,149 |
| 1897 | 531,628,162 |

From the consular district of St. John, which includes the port of Fredericton, the exports of lumber and shingles to the United States were valued at $304,163.61, showing a decrease as compared with the previous year of, approximately, $108,000. The following are the totals, by quarters, for the two years :

| | 1897. | 1896. |
|---|---|---|
| 1st quarter | $132,742.85 | $ 73,199.01 |
| 2nd " | 507,459.33 | 555,999.29 |
| 3rd " | 308,603.58 | 440,101.74 |
| 4th " | 304,163.61 | 287,071.86 |
| | $1,252,969.37 | $1,356,371.90 |

It may be noted that the lumber exports (exclusive of firewood and bark) for the last half of 1895 were valued at $956,078.29, compared with $727,173.60 in the last half of 1896 and $612,767.19 in the last half of 1897. That is, the exports for the last half of 1897 to the United States were $343,000 less than in the like period of 1895.

Coming to trans-Atlantic shipments, we find, according to Hon. J. B. Snowball's wood circular, a total of 494,204,195 feet, an increase in 1897 of over 100,000,000 feet as compared with the previous year. Much larger quantities were shipped to Ireland, Belfast showing a gain of 18,000,000 feet, and Dublin of 5,000,000 feet. The Manchester canal was the destination of 27,000,000 feet, while in 1896 only 5,000,000 feet found a market there. Particulars of shipments follow :

The disappearance of sailing vessels is marked by the larger average tonnage of vessels visiting St John. In 1895 the traders averaged 774 tons, in 1896 813 tons, and in 1897 985 tons. Sailing vessels are said to be favored by both shippers and receivers of lumber cargoes.

In view of the fact that the lumber business was overdone last year, the cut of logs this winter is being greatly curtailed, and the output will be little more than half the quantity produced last year. The wintering stocks, however, are heavy, so that there is certain to be an average supply available for shipment next season. The strength of the market will depend upon the course pur-

sued by shippers. A similar overstock to that of last year should be carefully guarded against.

### BRITISH COLUMBIA.

For many years the lumber trade of British Columbia has been depressed. The year 1896 showed a slight improvement, and indications pointed to greater prosperity in the year covered by this review. These hopes were to a certain extent realized. Although foreign shipments do not represent as large an export as the previous year, the local and eastern trade was much more active, and the mills were kept busy throughout the year. Competition was felt from the Washington manufacturers, who unloaded much low grade stock on the local market. Cedar lumber and shingles were shipped extensively to the Northwest and Ontario, while the construction of the Crows' Nest Pass railway accounted for several large orders. The consumption of lumber by new cannery buildings and box making also created a good local demand. The following table shows the distribution of the foreign trade :

BRITISH COLUMBIA LUMBER SHIPMENTS, 1897.

The above returns show that there sailed during the year 65 vessels, carrying, approximately, sixty-eight million feet of lumber, valued at $600,000. The bulk of the lumber was shipped to Australia, the United Kingdom, China and South Africa, as the following figures of the value of the shipments will show :

SHIPMENTS BY COUNTRIES.

| | |
|---|---|
| Australia | $188,955 |
| United Kingdom | 154,684 |
| China | 87,934 |
| South Africa | 71,246 |
| South America | 49,227 |
| Japan | 30,084 |
| United States | 25,602 |
| Total | $607,732 |

The demand for British Columbia shingles last year was about equal to the output. The erection of any more mills, however, would at once glut the limited market and cause an overproduction. In this connection it is stated that the immense output of red cedar shingles of Washington and Oregon stands as a menace to the British Columbia shingle manufacturers, and will continue so until the Dominion Government restores the tariff against United States shingles coming into Canada.

The price of shingles remained very low during the year, notwithstanding the fact that the demand was fairly good, and the price of timber has advanced 10 to 15 per cent. since the spring of 1897. There is every indication at the present time of a further advance in the price of timber. It is also expected that labor is going to be scarce and high priced next spring. Cedar timber available at anywhere near the present prices is certainly becoming scarce, and if eastern lumber merchants want British Columbia shingles they will have to pay at least 25 per cent. in advance of present prices.

### MANITOBA.

The year 1897 was, it is believed, the beginning of a new era of prosperity for Manitoba and the Northwest Territories. The farmers sold their grain at good prices, which placed them in a position to erect new buildings and make necessary improvements. Throughout the summer and fall seasons there was experienced a brisk demand for lumber, and stocks at the mills were well sold out before the close of the year. Retail dealers and manufacturers alike are hopeful of 1898 trade. To such an extent is this the case that the log production this winter is being greatly increased, and it is probable that the cut of lumber next year will exceed the past season's output by fifty per cent.

## CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

### IMPORT DUTY ON LUMBER.

PORT ARTHUR, ONT., Jan. 11th, 1898.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—Permit me to say a few words regarding a subject of much importance to Canadian lumbermen. Under the existing duty of $2.00 per thousand feet on lumber entering the United States, the whole of the lumber trade of Canada is handicapped. The Georgian Bay section are unable to ship the lower grades to the United States, and when they attempt to sell at home they are met by the Michigan man, who sells his better grades at home and dumps the common grades into Canada at a price that Canadians cannot compete with, for the reason that the American gets a fair price at home for the better class of stuff, and must find a market for his lower grades, which forms quite a large percentage of the whole.

During the year 1897 the Americans sent into our market of Manitoba about 15,000,000 feet, with all the freedom and facilities that we have and at prices which we were scarcely able to compete with. If the American manufacturer had to pay a $2.00 duty, then the Manitoba market would be open to the Georgian Bay trade, as the difference would carry lumber from the latter point to Thunder Bay, and at that point he would be on an equal footing with the manufacturer at Thunder Bay.

We would much prefer to see Georgian Bay lumber in Manitoba than the product of American mills ; and in that case the grades would be maintained, whereas now the American grade is below ours. The farmer, who is the chief consumer in the west, gets the American lumber somewhat cheaper, and fails to realize that he does not get the grade. He figures that, if by driving twenty or thirty miles for a load of lumber he can save $3.50, he gets his 2,000 feet of lumber for that much less, but in reality he has more than earned the difference by driving to some distant point that is touched by the Northern Pacific system ; besides he gets an inferior grade.

In British Columbia we find the same handicap. Living, and consequently wages, are cheaper in the district of Washington than in British Columbia; therefore the Washington mill man is able to manufacture cheaper than the British Columbia man, and send his product into British Columbia at prices that cannot be competed with, while he himself stands behind the shield of a $2.00 duty. To finally sum up the whole situation, we find the Michigan lumberman captures the trade of Ontario; the Minnesota lumberman captures the trade of Manitoba ; the lumberman of the district of Washington captures the trade of British Columbia, and we simply become hewers of wood without any protection. As lumbermen, we have the same right to protection from Ottawa as the American manufacturer has from Washington. We are not afraid of open and fair competition, and would only say "Canada for Canadians" as far as our neigbors say "America for Americans."

Yours truly,

RICHARD VIGARS.

### PRODUCTION OF PULP WOOD IN QUEBEC.

DEPARTMENT OF CROWN LANDS,

QUEBEC, Jan. 11th, 1898.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR,—Duly authorized by my Minister, permit me to offer explanations regarding the output of pulpwood in this province, as the comment and comparison drawn in your last issue on the Commissioner's report for 1897 may have an erroneous construction put upon same. The greater part of the pulpwood produced in Quebec province has of late years been got out in log lengths and has been returned as spruce logs, consequently it appears under the heading of "Spruce Logs." Only the small quantity cut in four foot lengths and returned as in cords appears under the heading of "Pulpwood."

In view of the increase in volume of the pulpwood trade, it is probable that my Minister will cause such alterations to be made as will enable the department to show the total output of pulpwood (in cords and logs) combined in one and the same column, and quite distinct from the spruce log column.

Thanking you for inserting the above in your paper, I am, dear sir,

Yours faithfully,

W. C. J. HALL.

A case which has been in the courts for over three years was finally decided last month in the Court of Appeal at Huntsville. It was entitled Dunlop vs. Whaley Lumber Co. Three years ago Judge Mahaffy gave judgment against this company for $578.32. The case was appealed to Judge Ferguson, who reversed the former decision. The plaintiff then appealed to the Court of Appeal, where four judges confirmed the decision in favor of the Whaley Lumber Company. A local paper states that the case should never have been before the courts, and had it not been for the blundering of a government official, the suit would never have been entered.

## THE OUTLOOK FOR LUMBERMEN IN ONTARIO.

Now that the Ontario Government has passed the restrictive legislation asked for by the lumbermen, in almost the exact terms of their request, and placed the saw mill owners of the Georgian Bay on a footing of equality with Michigan owners of Canadian stumpage, it remains to be seen what the immediate future of the lumber trade will be. The action taken of preventing the export of logs cut from Crown lands, whether the license was held by an American or a Canadian, was one which could not well have been avoided; it would have been an acknowledgement of utter helplessnes to have permitted Americans to come here, cut down our forests, raft the logs to their mills in the United States free of export duty, while our own mills were closed down, our workmen idle, and the demand lost for all the subsidiary work and supplies required in running a saw mill.

We have never yet heard Canadian lumbermen say that they were afraid of any fair competition; but to quote the words of the lumbermen when before the government on the 10th of December last, "under present conditions of free logs for export and a duty of $2.00 per thousand feet, sawing in the Georgian Bay for the American market could not be continued; the business of sawing lumber would, of necessity, be transferred to Michigan." This state of things would have been established by the action of the Dingley bill. That famous measure, which became the law of the United States on the 24th of July, 1897, has been a great disappointment to many of its promoters. When President McKinley was elected in November, 1896, a determined effort was made to boom the lumber business, and for two or three weeks great activity prevailed, especially at Michigan mills on the lake shore, shipping out lumber to wholesale centres; but the extraneous demand soon collapsed, and the same dreary listless condition of trade came back again.

A large trade like that of selling forest products has so many ramifications and is subject to so many different forces, near and remote, that the mere passing of a tariff bill is often a small factor in determining the price. Take, for example, the Wilson bill, which was passed in 1894 and gave Canadian lumber free entry into the United States; it was naturally supposed that it would be a great boon to Canadian producers; whereas in the years immediately following, lumber, even with the benefit of free entry into that country, was sold lower than it had been at any time for nearly twenty years. The international problem of the lumber and log trade is not so difficult a matter after all. It will be remembered that an agreement was reached between Sir John Macdonald and Mr. Blaine in 1890, that in consideration of the American government reducing their duty on lumber to $1 per thousand feet, Canada would abolish her export duty on logs. This was done by the McKinley bill in the United States and by order-in-council for Canada, and the state of things continued until 1894, when the American government placed lumber and most forest products on their free list.

When Mr. McKinley was elected President, with his high tariff policy, the lumbermen of the United States lost no time in demanding that the old duty on lumber should be restored; this was accomplished by the Dingley bill last summer, and no Canadian has offered an objection, considering it entirely a matter to be dealt with by the United States. But meantime affairs in Michigan had changed; a number of mill owners had cut out their holdings of pine, had purchased standing timber in Canada, and were floating over large quantities of logs to supply their mills. They were naturally afraid that now a duty had been again imposed on lumber, the Dominion government would revert to their old policy of placing an export duty on logs to even up matters; so with that astuteness for which they are famous, they sought to outwit their slow-going Canadian neighbors, and make it impossible for them to again place an export duty on logs, by adding to the duty on lumber the amount of whatever export duty might be imposed by the Dominion government. This was intended to work beautifully, and place the remaining white pine in the Georgian Bay district entirely at their disposal. Like a great many more people, however, who are too clever, they have been caught in their own trap, and after this season's logs are disposed of, they will either have to stop cutting or move their mills over to the Canadian side.

The policy of the Ontario government by which the export of logs will be stopped has the approval of a large majority of the manufacturers, both of pine and hardwood. What the effect may be on future prices it is, of course, difficult to foretell; meantime common lumber and mill culls of white pine have already advanced sufficient to pay the duty and give Canadian sellers nearly as high a price as could be obtained last spring. Good lumber can always find a market either abroad or in the United States, where the duty on high grades is of little consequence. Hardwood is to-day a better price and in better demand than it has been for years.

It may be said further, that anything that will help to curtail the undue haste with which our forests were being cut down of late years, and give the younger growth a chance to mature, will be of permanent benefit to the province. We have still a large area of untouched white pine, mixed with hardwoods, which we need be in no hurry to cut; it will all be wanted and at a good price.

In conversation with lumbermen generally, we find them quite satisfied with the recent legislation, and not at all disposed to make any overtures to their confreres in the United States, but rather to meet hostile legislation by what is necessary to protect their own interests. We may therefore look forward with some complaisance to what the future has in store for us, feeling certain that the ownership of forests on this continent is a position of advantage which we occupy and should seek carefully to retain.

## DEVELOPMENT OF OUR EXPORT TRADE.

Lumbermen in all parts of the Dominion are encouraged by the prospects for foreign trade. Greater attention is now directed to the wood products of Canada than ever before. This is in a measure due to the action of the Dominion government in sending special trade commissioners to foreign countries to report upon the possibilities of finding a market for our goods. These commissioners, almost without an exception, have reported that they found a general disposition in favor of dealing with Canada, and that it would require only persistent effort on the part of our manufacturers to capture a fair share of the trade. The Government and its agents, the commissioners, having fulfilled their duty, it remains for the manufacturers to profit by the advice which has been given.

Are the lumber manufacturers of this country exerting their utmost efforts to develop the foreign trade? When we say "foreign trade," we do not include the United States, which though our nearest market, is yet one of the most unsatisfactory, owing to frequently recurring tariff disturbances.

Some might point to the fact that our foreign trade is increasing annually as an evidence that no opportunities are being neglected. But it must also be said that foreign buyers have met the manufacturers more than half way. Were it not for the desire on the part of foreign houses to secure Canadian lumber, we believe we are within the limit of truth in saying that the volume of our trade in this direction would be of smaller proportions. No united effort on the part of lumbermen has been made to secure accurate information regarding the requirements of many of the markets, and to place this information in the hands of the trade generally. The particulars furnished by commercial agents are necessarily lacking in details, and steps should be taken by the manufacturers themselves to supplement them.

The sending of a representative to foreign countries to study the markets and negotiate for shipments would probably entail an expenditure greater than many of our manufacturers would feel disposed to risk. More especially would this apply to our hardwood manufacturers. A proposition looking towards some united effort ought, therefore, to be considered.

Such a step was discussed at a recent meeting of the Furniture Manufacturers' Association of Ontario. Some of the members pointed out that they had already more orders for furniture from Great Britain than could be turned out in their factories, and a committee was appointed to deal with the matter. It is probable that a large company will be formed to control the export furniture trade, and that a representative will be sent to England to promote its interests. Could not the lumbermen, with advantage, copy the example of the furniture men in this matter?

## EDITORIAL NOTES.

THE report of the Ontario Forestry Commission, published elsewhere in this number, should be carefully studied by every lumberman in the Dominion. It contains valuable suggestions as to the methods of lumbering, as well as the course which should be adopted to perpetuate our timber supply. The work already accomplished has demonstrated the wisdom of appointing the Commission. In our next issue we hope to refer at greater length to this important subject of forestry.

THE lumber manufacturers of British Columbia have taken steps to secure the imposition of an import duty on lumber. At a meeting held at Vancouver on December 24th, and reported in our weekly edition, resolutions were passed favoring such a measure, and setting forth the unfair conditions now existing, as a result of which one manufacturer has already removed to the United States, and others promise to take similar action unless given some redress by the Dominion government. Elsewhere in this issue Mr. Vigars, of Port Arthur, also refers to the question. He points out that Western Ontario, Manitoba and British Columbia are flooded with low grade lumber from the United States, which is very inferior in quality and sold at a price which will not permit of fair competition. Having a wide market for their good lumber, the United States manufacturers can afford to sell their low grade stock at cost of manufacture. Canadian manufacturers are debarred from the American market by a two-dollar duty, while American manufacturers are allowed free entry to the Canadian market. Until conditions are equalized it becomes the duty of the Dominion government to protect the Canadian lumbermen, and at the next session of Parliament we look for some legislation along this line.

## THE LATE T. W. WALKER.

THOMAS W. Walker, a gentleman widely known in lumber circles, died at his home in Toronto on Friday, January 14th. For about a year he had not enjoyed good health, having suffered from heart trouble, which finally resulted fatally.

Deceased was born in Toronto on June 12th, 1852. He was the second eldest son of Sar-

THE LATE T. W. WALKER.

geant James Walker, who came to Canada from England with the 27th Royal Artillery, and had charge of the Magnetic Observatory established in Toronto for 27 years.

At the age of 15 years the subject of this sketch entered the employ of Joseph Davidson, who at that time had a large retail lumber yard. There he received his first experience in the business which he followed during the remainder of his life. After a few years, in 1872, he accepted a position as inspector with the late S. R. Briggs, wholesale lumber dealer, and while thus engaged was associated with Mr. Joseph Oliver, now manager of the Oliver Lumber Company. His next position was with the late Wm. Latch, wholesale and retail dealer, with whom he remained only a short time, resigning to accept a more responsible position with the Rathbun Company, as their Toronto agent. In this capacity he purchased all the lumber for this company on the Northern and Midland divisions of the Grand Trunk Railway, handling as much as 30,000,000 feet of lumber and 5,000,000 shingles in one year. He remained with the Rathbun Company until 1894, when he formed a partnership with Mr. J. Watson, as wholesale dealers, under the name of Walker & Watson. Owing to the retirement of Mr. Watson, the partnership was subsequently dissolved, and since that time he had been engaged in buying and selling on his own account and for other parties. At the time of his death he had about concluded arrangements to accept a position with Messrs. Kingsford & Sons, starch manufacturers, of Oswego, N.Y.

The late Mr. Walker was a thorough lumberman, an excellent judge of lumber and a shrewd buyer. He enjoyed a reputation for fair dealing, and had many intimate friends. He was a great reader, well educated, and possessed a thorough business knowledge. In military circles he was also well known, having fought with the Queen's Own Rifles at Ridgeway in 1866. His funeral was attended by members of the Veterans' Association.

## REPORT OF THE ONTARIO FORESTRY COMMISSION.

THE first report of the Ontario Forestry Commission was presented to the Legislature early in January. It treats of many subjects of interest to lumbermen and readers of this journal, and is therefore printed below in full :

TORONTO, Dec. 20th, 1897.

TO HIS HONOR THE LIEUTENANT-GOVERNOR :

The Royal Commission appointed in June last for the purpose of investigating and reporting on the subject of restoring and preserving the growth of white pine upon lands in the province which have been cleared or partially cleared by lumbering operations or by fire, and which are not adapted for agricultural purposes or for settlement, held its first meeting in the Parliament Buildings on July 7th. All the members of the Commission were present, viz., Messrs. E. W. Rathbun, Chairman, President of the Rathbun Company, Deseronto, lumberman ; John Bertram, President of the Collins Inlet Lumber Company, Toronto, lumberman ; J. B. McWilliams, Peterboro', superintendent of Forest Rangers ; Alex. Kirkwood, chief clerk land branch, Crown Lands Department ; and Thomas Southworth, clerk of forestry, Parliament Buildings. Mr. Rathbun was elected chairman of the Commission, and Mr. Kirkwood vice-chairman, Mr. Southworth having previously been appointed secretary by order-in-council. The organization meeting of the Commission was attended by the Attorney General and the Acting Commissioner of Crown Lands. The Attorney General gave his views as to the scope of the enquiry to be undertaken, and defined the object of the government in appointing the Commission to be the submission of a scheme for the reclamation of large areas of non-agricultural land now unproductive, and such suggestions for the carrying on of future lumbering operations as the information obtained by them would indicate to be desirable as a means of preventing similar land now wooded from becoming waste. It was thought advisable that members of the Commission should personally visit and investigate as large an extent of the forest area of the province as possible. During the summer and fall the members of the Commission visited the townships of Smith, Harvey, Galway and Burleigh, in the county of Peterborough ; the territory along the north shore of Lake Nipissing and down the Vermillion River, in the township of Louise ; the country round Thessalon, Algoma Mills and Killarney ; the townships of Carlyle and Humboldt, and other points on the north shore of the Georgian Bay and in the neighborhood of Sault Ste. Marie. Your Commissioners also inspected some of the territory on the north shore of Lake Superior and the country along the line of the Port Arthur & Duluth Railway west of Port Arthur, in addition to taking a somewhat extensive trip through the Rainy River country, visiting also portions of the northern parts of Minnesota and Michigan in the United States.

### FUTURE TIMBER SUPPLY.

As your Commissioners are anxious, as speedily as possible, to acquire some general knowledge of the conditions existing in different parts of the province, they did not make that minute examination into the sylvicultural conditions and habits and rate of growth in the particular localities that will be necessary before submitting detailed plans for the care and management of the respective areas visited, and which may hereafter be put under systematic treatment. Their investigations, however, were of a sufficiently technical character to warrant them in coming to the conclusion that with sufficient areas set aside for the purpose, and with reasonable care and protection of the young and growing timber now upon them, the supply of merchantable timber in the province of Ontario will be vastly augmented. In most of the places visited, a forest growth was found in all stages of development, with the exception of some territory in the neighborhood of Port Arthur, where conditions seemed to be somewhat different from those observed in other localities. Wherever the original growth was pine, or pine mixed with other trees, the natural tendency is towards the reproduction of the same species. Unfortunately, however, this reproductive faculty in many instances has not been allowed free play. The former apparently limitless forest wealth of Ontario has led to careless and somewhat extravagant methods on the part of our lumbermen ; a belief that so far as the timber supply of the future was concerned it made no practical difference how our forests were exploited owing to their immense extent, has resulted in wasteful and incautious practices. Large quantities of waste material and litter, consisting of the tops and branches of trees, were left lying on the ground to feed the destructive fires that almost invariably followed, and which, until a comparatively recent period, no effort was made to check. The action of these fires in sweeping away the trees left by the lumbermen had the effect of retarding the reproduction of the original forest growth, and sometimes resulted in a crop of other varieties, that for various reasons were more readily propogated. It is found, however, to be the case that where any of the original trees survived the fire and produced seeds, the forest has eventually, though perhaps slowly, assumed the characteristics of the growth indigenous to the locality.

### QUICK REPRODUCTION.

The widely entertained theory that the white pine on being cut away is invariably and permanently succeeded by a crop of inferior varieties was completely disproved by the frequent instances observed in which tracts of flourishing young pine trees are growing up on cut-over land, and the prevalence of the idea can only be accounted for on the ground that fire has in so many cases completely exterminated the pine in all stages of growth. In most of the burned over territory examined, pine was found intermixed with other trees, and gradually, as was no doubt the case with the original forest, is asserting the supremacy and dominating the surrounding trees of the young generation. There is every reason to believe that with the exclusion of fire, and the adoption of more intelligent aud provident methods of lumbering, having regard to the abundance of seed at the time of cutting, there would be no difficulty in securing a quick and sure reproduction of the varities of trees desired. As previously stated, these conditions have not hitherto prevailed. In most of the territory inspected forest fires, sweeping over the country after the lumbermen had removed the more valuable pine trees, have destroyed what was left. Sometimes the fire was not so severe as to destroy all the dormant seeds that may have been on the ground, protected by the leaves and forest debris awaiting favorable conditions to germinate, but in many cases these were destroyed, and few, if any, of the parent trees left to provide seeds for a future crop. In the case of such trees as the pines, this latter circumstance was an effectual bar to the speedy reproduction of the trees. Although the seeds of the pine are winged they will not, in falling from the cones, scatter very great distances from the trees, and where only a very few parent trees remain more time is required to seed a given area than if the seed trees stood more thickly and shed a more profuse and better distributed yield of seed. The question of how far the seeds of the white pine may be conveyed from the parent tree in falling is a point still being investigated by the Commission. In the meantime the seeds of the aspen poplar, the birches and cottonwoods, which from their downy appendages are capable of being carried great distances by the wind, soon cover the burned-over area, and a vigorous crop of these varieties springs up and speedily occupies the ground. In most cases, however, a few pines have managed to survive the fire, and where this is the case, their seeds are scattered among the young poplars and take root and grow in their shade. If a forest fire has completely bared the ground the presence of the young broad-leaved trees is essential for the successful growth of a pine forest. The young pine plants, particularly pinus strobus, or white pine, are extremely sensitive to strong sunlight, and if exposed to the sun are almost certain to be killed in the first ten days of their growth. Hence the cover afforded by the poplar affords the shade conditions needed for the young. If there were no fire, however, the cover afforded by the trees left by the lumberman would doubtless provide the shade required for the successful propagation of the pines, but after the forest fire the quick growth of the poplar is a favorable condition for restocking the burned area with the original and most valuable trees.

### GROWTH OF THE PINE.

In looking casually at a young forest on one of these devastated tracts, the first impression conveyed is that poplar and other desiduous trees form the sole vegeta-

tion, but a closer inspection will reveal the presence of a large stock of young conifers growing in the shade of the poplars. The young pines shoot up straight and slim, reaching for the source of the light that filters through the leaves of the poplar. In the course of time the pines, which develop slowly at first, overtake and outgrow their competitors. The growth of the pine during the first two or three years is slow, but after that time the rate of growth increases in a very marked degree. In such a forest of about 20 or 25 years' standing the pines will be observed here and there protruding their crowns above the leaf canopy. The poplars, being gradually crowded out by the sturdier evergreens, die and decay, adding to the soil nutriment for the now dominant pines. The dense shade furnished by the poplars has in the meantime killed the lower branches of the pines, which consequently rise straight and free of limbs to the height of the crowns of the desiduous trees. The next and final stage reveals the forest as it originally stood, displaying a mixed growth, with the tops of the giant pines visible from a distance, reaching above the general level of the leafy canopy of the forest.

The township of Burleigh, in the county of Peterborough, comprising an area of 124 square miles, may be considered a typical sub-division of what was at one time an extensive lumbering district. The cutting of square timber and saw logs in the township began about fifty years ago. The original forest was principally pine of excellent quality mixed with hardwoods. A colonization road opened the way for settlement about 33 years ago, but owing to the outcrop of rock, settlers are confined to small districts. Lumbering operations continued active for forty years, and even yet there is a small quantity of merchantable pine standing. The usual result followed, where mixed operations of settlement and lumbering were carried on together; nearly the whole country was ravaged from time to time by forest fires.

As showing what the actual conditions may be in a cut-over and burned-over area, a portion of the township around Burleigh post office, on the west side of Eels Creek, where the creek runs alongside of the colonization road, was selected for investigation. There are but few settlers in this part of the township; the soil is rocky and unfit for settlement, except in patches, and is not far from the contact between the granite and the limestone. On the west side of the creek the country is a veritable wilderness; it has been burned over repeatedly, the last fire occurring in 1896, and, judging from the size of the charred remains of the young growth, another fire had swept over it three years before that time. The frequent fires have burned a large part of the soil and killed any pines that may have been left by the lumbermen, so that any natural reforestation would here be a very slow process.

The east side of the creek presents altogether a different aspect. Viewed from the Burleigh road, it has the appearance of a thrifty young poplar forest, with a few young pine trees appearing on a level with the poplar. On closer examination it was found that the young forest was largely composed of white and red pine, poplar, white birch, balsam and spruce, with cedar, black ash and spruce in the lowlands, as well as an odd pine tree standing here and there that had been left by the lumbermen—relics of the original forest that had survived the fires. From information, given by the postmaster, who was formerly a lumber foreman and is an old resident of the district, your Commissioners were able to fix the exact date of the last fire that swept over this territory. It occurred twenty-three years ago.

The trees were of various ages and showed different degrees of growth according to situation. A fair average of the older poplars would be 5¾ inches in diameter at two feet from the ground, with 20 annual rings of growth at this point, making the tree, say, twenty-two years old. As a rule, the poplar was taller and with smaller diameter than the pine. The white and red pine stood thick on the ground, of various ages, vigorous and healthy, and will, in a short time, if protected from fire, overtop the poplars and assert the supremacy of the species as some few of the trees have already done.

Tho older white pine average 6 inches in diameter, two feet from the ground, with 19 annual rings of growth, showing them to be about the same age as the poplars. Red pine was the same age, but the average diameter of the trees examined was half an inch less than the white pine. The average height of the pines was about 26 feet, and showed by the branches a varying height growth of one to two feet yearly. Black ash in the swamps average 5 inches in diameter in twenty-two years, cedar 3¾ inches in twenty-six years, and spruce in these swamps which had not been burned at the last fire, standing amidst a very thick growth, averaged only four inches.

### PROSPECTIVE VALUE.

The conclusion arrived at was, that within thirty-five years lumbering operations in this locality could be profitably resumed, the larger pine trees taken out, producing timber of merchantable quality and giving the younger trees a better chance to grow. Reasonably good forest conditions could, under proper regulations for cutting, be induced, and a continuous supply kept up. The one great requisite for preserving this valuable asset to the province is the absolute prevention of fire. The foregoing statement as to the condition in the Township of Burleigh may be taken as fairly typical of the course of natural forest regeneration in nearly all the fire-swept lands which came under examination—the only exception being where forest fires have been too frequent to allow the young vegetation to make headway. Throughout many of these tracts, popularly supposed to be of no value, the second growth is springing up in profusion, and though the trees may be of little present value, their prospective value is very great, though difficult to estimate, as the time when these forests will be available depends very much on the question of adequate fire protection. Any estimate of their existing value must necessarily be on the basis of what they will be worth at such time as the timber becomes marketable to good advantage. On this point, Dr. Rothrock, Commissioner of Forestry for Pennsylvania, says in a report on Forest Fires in 1896:

"For example it is fairly within bounds to assert, that if all the unproductive lands now vacant and uncared for, which exist within the limits of the state, were protected from forest fires, for say 40 years, the timber then growing would be worth not less than one billion, two hundred million of dollars ($1,200,000,000). It is quite certain that if this growth were destroyed by fire when but a year old, the loss to the Commonwealth directly would be absolutely unimportant. The same might be said if we were to see it destroyed at two, three, four or even five years of age. But when we remember that in burning these seedlings, which are but a year old, we destroy a crop which in point of time is one-fortieth of its way to a money value of $1,200,000,000, the damages are consequential or indirect in character and if expressed in figures must equal not less than thirty millions of dollars as the loss to the Commonwealth."

If these figures be correct for Pennsylvania, and they are not disputed, how much greater would be the loss to Ontario by the destruction of our much larger area of second growth forest? As in the case of the Burleigh township woodlands, many of these young forests will be sufficiently far advanced to be cut long before 40 years. These considerations inevitably lead to the conclusion that the main factor in reclothing the burned-over lands is the question of fire protection. While there have been even within recent years extensive and devastating fires destroying large amounts of timber, the saving to the province effected by the system of fire-ranging adopted in 1886 has nevertheless been very great. During the course of their investigations your Commissioners had brought to their notice a great many instances in which incipient fires that, unchecked, would have been disastrous in their consequences, were successfully fought and suppressed by the rangers. Wherever the system has been employed by the various limit-holders the results have been very marked. It is to be noted, however, that as the employment of fire rangers is optional with limit-holders, some of them have failed to take advantage of the system, at the risk not only of their own limits, but of those of their neighbors in addition. During the summer your Commissioners made a short trip north of the Height of Land, on the headwaters of the Missinavi river, flowing into the Hudson Bay. It was found that the Indians in this territory are to some extent careless in regard to fires, with the result that considerable territory along the borders of the streams has been from time to time burned over. This is due largely to want of knowledge on their part that the immense forests of that country have any particular value. The Commission was advised by a gentleman of the Hudson Bay Company that if the matter were brought to the attention of the Indians, most all of whom are able to read their own language, a great improvement in this respect might be effected. The Hudson Bay officials expressed a willingness to co-operate with the government in any effort that might be made to educate the Indians as to the importance of looking after their camp-fires and extinguishing any incipient fires that might be started.

It was found that in most cases burned-over areas growing up to small timber are on lands not suited for agricultural settlement, and in order that the Government should reap the full benefit of the annual increment by the protection of these lands, they should be exempt from the possibility of settlers squatting on them, ostensibly to cultivate them, but really to secure and dispose of the growing timber.

### METHOD OF LUMBERING.

Though, possibly, it may be regarded as somewhat beyond the scope of the enquiry specifically assigned to them, your Commissioners desire to draw the attention of the Government to the great loss of revenue and the detriment to the standing forests occasioned by the practice pursued by some lumbermen of taking out trees in the beginning of the most profitable period of their growth. Whereas, at an earlier stage of the lumbering industry, few trees of smaller diameter at the butt than 14 inches were taken out, it is now not unusual to see some drives largely made up of mere poles—sticks as low in diameter as six inches. No doubt this improvident method of lumbering is to some extent to the belief that these young trees, if left standing, would probably be burned, and to the expectation that the land might be needed for settlement.

It must be admitted that under former conditions the fear of fire was to some extent justified, but since the danger has been so greatly minimized, the conditions are altogether different. The small revenue derived by the Province from these half grown trees renders it desirable that the practice should not be followed unless under very exceptional circumstances indeed.

### RATE OF GROWTH.

Your Commissioners, after close investigation, conducted under varying circumstances and covering a wide area, with different conditions of soil and density of growth, endeavored to arrive at an average rate of growth and consequent commercial value of young white pine, from a period at which a tree would make an eight (8) inch butt log 16 inches long, and produce a butt log 14 inches in diameter and 16 feet long, and submit the following conclusions, which are very conservative:

A young tree which would cut only one log 8 inches in diameter and 16 feet board measure, would, if allowed to stand for thirty years, grow in diameter at the rate of one inch in five years, (in some cases the growth is as rapid as an inch in two years) and hence would give a butt log of 14 inches diameter, 16 feet long, or 100 feet of lumber, board measure. In addition to this, however, this tree would have grown in height sufficient to give two more logs, one say of 11 inches and one of 8 inches diameter, both 16 feet long, measuring respectively 49 feet and 16 feet B.M., or a total for the tree of 164 feet B.M. Thus a tree that required 40 years to make its first 16 feet of merchantable timber, would in 30 years more have increased to 164 feet. This may be considered the period of greatest relative growth. After attaining a diameter sufficient to make a 14 inch butt log, your Commissioners estimate that the tree would continue to gain at the rate of 3½ per cent. per annum. This bare statement of the case shows the necessity of protecting the young growth of the pine in the interests of the Province. The advantage to the lumberman in holding his trees till they have reached the larger diameter is still more marked because of the greater price per 1,000 feet commanded by lumber cut from the larger logs.

But this is not all—pine trees do not begin to bear fertile seed in profusion until they reach nearly the age required to produce a diameter of six inches, and the process of forest reproduction is likely to be retarded by the removal of the seeding trees.

### MARKET FOR WASTE MATERIAL.

As previously intimated, your Commissioners, in consequence of a comparatively limited amount of attention they have been able to devote to the matter, do not feel themselves justified in making a final report, especially as the important lumbering region of the Ottawa Valley has not been inspected by them. They are desirous, moreover, before concluding their labors, of making a full investigation into one phase of the question which has hitherto been but slightly considered, viz., the possibility of securing a remunerative market for the waste and refuse of lumbering operations, as well as for those of our forest trees not now commercially valuable. In economic forestry practice it frequently happens that the development of a young forest can be greatly enhanced by the thinning out of the trees where they stand too thick, and the cutting down of less valuable varieties. At present the difficulty of disposing of these thinnings to any advantage makes this practice impracticable in Canada. Could such a market be found it would be a decided advance towards the adoption of more economical and less dangerous methods of lumbering, and would of itself do much to decrease the extent and frequency of forest fires.

From inquiries thus far made, your Commission are inclined to believe that much of this apparently useless forest material, particularly in the old lumbered-over districts, can be utilized in the manufacture of pulp and small wood goods, or for the production of charcoal for smelting ores, etc. Further investigation will no doubt assist in coming to a more definite conclusion on this most important part of the subject. A prolific source of forest fires in some parts of the Province is the carelessness of many mining prospectors in the matter of their camp fires. Some plan of lessening this danger by regulations that will make the prospector more responsible to the authorities would seem advisable, and is under consideration.

Thus, while it is obvious that the work of the Commission is far from complete, yet deeming that some phases of the situation require present action, your Commissioners make this brief but preliminary report, and beg to recommend:

1. That the present system of fire-ranging inaugurated by the Government in 1886 be extended so as to be compulsory on all the holders of timber berths, and that all unlicensed timber lands contiguous thereto be also protected by rangers employed by the Government. That all fire-rangers be subjected to the inspection and control of the Department of Crown Lands.

2. That the officials of the Hudson Bay Company be asked to co-operate with the Government in preparing and printing fire proclamations in the language of the Indians of the northern districts, to be posted along the canoe routes throughout the territory.

3. That for all unworked limits on which the ground rent shall be two years in default on the termination of the present license year, the licence shall not be renewed, but that the berths be held by the Crown as forest reserves.

4. That license-holders be not allowed to cut any trees for logs smaller than will measure twelve inches across the stump two feet from the ground, unless under special forest conditions, with the sanction and under the supervision of the district forest ranger.

5. That the Government take power by order in Council to withdraw from sale or location and set aside, to be kept in permanent Crown forest reserves, such areas of territory as are generally unsuitable for settlement and yet valuable for growing timber.

All of which is respectfully submitted.

E. W. Rathbun.

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., JANUARY 26, 1898 No. 2.

## CANADA LUMBERMAN

PUBLISHED BY

C. H. MORTIMER

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the Canada Lumberman."*

### TIMBER LIMITS FOR SALE.

In this column appears an advertisement offering for sale very valuable timber limits in the province of Quebec. These limits are 235 miles in extent, and are situated on the river Manowan, tributary to the St. Maurice. The timber is chiefly pine and spruce, and owing to the immense quantities of the latter adapted for pulp-wood, and the increasing demand for Canadian pulp in the British market, these limits are especially valuable, and will no doubt be eagerly sought for.

### CURRENT TRADE CONDITIONS.

#### ONTARIO.

Another week has brought no material change in the lumber market. The spring movement has not yet commenced, although there are indications that at an early date some stock will have to be purchased for requirements. One favorable feature of the market is the demand for box lumber. The consumption by box makers in the Eastern States, and especially in New York, has been very heavy, and stocks are now so far reduced that dealers have been compelled to enter the market for a new supply. The price has advanced accordingly, and $7 is now willingly paid in New York for mill culls of white pine. Canadian manufacturers have sold some quantities of box lumber at a price which gave them a better margin of profit than was realized before the duty on lumber was imposed. It is expected that during the coming spring the local demand will improve, as building prospects are brighter than for many years. A greater quantity of lumber will also be marketed in European countries. The hardwood trade is quite satisfactory for this season of the year. A number of enquiries have been received for maple, basswood and soft elm for early shipment. Shingles are scarce and will likely advance as soon as the spring trade commences to move. A greater production is expected during 1898. The prospects for getting logs out of the woods were until recently quite gloomy, but the late snowstorm and cold weather will probably permit of all the logs being banked.

#### QUEBEC AND NEW BRUNSWICK.

In the absence of any important transactions for foreign shipment, there is little to report in Quebec business. Local trade is at a standstill, and the United States trade is but little better. An encouraging feature of New Brunswick trade is the promising market in France and Spain. Some orders have already been placed, and more are likely to follow. Some cargoes will also go forward shortly to South America and Australia. The former market, which was overstocked in 1896, is expected to revive during the present year. It is estimated that in New Brunswick there is held over, of last year's production, about 160,000,000 feet. This will be available for spring shipment.

#### MANITOBA AND BRITISH COLUMBIA.

In Manitoba and British Columbia there is a general belief that the country is on the eve of prosperity such as has not been experienced for many years. Large sales of outfits for the Klondike have been made at Vancouver, and this has induced a better feeling in all lines of business, including the lumber trade. The mild weather permitted building operations to proceed late in the year, thus reducing the lumber stocks. Money is reported as easy and collections good. With protection from the unfair competition of United States manufacturers, the lumbermen look forward to a prosperous year. The foreign shipments during 1897 exceeded sixty-eight million feet.

#### UNITED STATES.

That the wholesale trade will shortly commence to move is evidenced by the substantial increase in the number of enquiries for stock coming from the Eastern States. A couple of weeks ago dealers were somewhat despondent, and could see little that was promising in the future. Now the outlook has brightened, and while business cannot be reported as active, there is sufficient trade doing to prove that the east is short of lumber, and that consumers and retailers must shortly enter the market as buyers. The situation in the west is also likely to improve the eastern market. There farmers are preparing to erect many new buildings, and architects are reported as unusually busy. The consumption of lumber by this source will utilize much of the Michigan production which would otherwise come in competition with Canadian lumber. North Carolina pine has advanced in the New York market 50 cents, and there is a scarcity of box lumber. This is also the case at other eastern points, where there has been a vast improvement in the industrial world. Spruce is slow to improve, and prices, although firm, have not as yet advanced beyond the present unsatisfactory figure. The experience of the last week has demonstrated more than ever that dry stocks are scarce, and before the new cut is available the visible supply will be consumed. Some dealers who have carefully sized up the situation are turning down some orders and holding out for advanced prices. There is a large requirement for car building, and most of the implement factories are quite busy. Many of the furniture factories are also in the market for stock.

#### FOREIGN.

British importers of wood goods have not as yet been able to place many contracts. There appears to be a disposition

to wait until later in the year, in the hope that lower prices will prevail. On the other hand, it is believed that if the strength of the market can be maintained for a few weeks, buying will then commence, and an improvement will immediately follow. The Swedish shippers have been fairly successful, and have disposed of 50 per cent. of their export. It is also said that Canadian houses have placed their spruce in quarters where Baltic woods have been purchased heretofore, this showing a growing appreciation of the timber of this country. The buying, however, has been chiefly small lots. The engineering difficulty has undoubtedly had a disastrous effect upon business, and, unfortunately, we cannot yet report a final settlement, although that seems probable at a very early date. Glasgow trade is reported to be quite promising, and the rapid consumption promises to greatly reduce stocks before the arrival of spring goods. Some light shipments have arrived per regular steamers from Montreal. The Australian market is fairly steady, and importers have maintained the slight advance recently made. A shipmet of spruce from Quebec is being disposed of moderately at prices which give a slight margin of profit.

## STOCKS AND PRICES.

CANADA.

The exports of forest products from Canada during the year 1897 were valued at $19,767,000, against $18,762,000 in 1896.

The Snider Lumber Co., of Gravenhurst, Ont., expect to cut next season between four and five million feet of pine and hemlock, largely for local trade.

The German bark Pamelia recently sailed from the Hastings mill, Vancouver, B. C., with a cargo of 1,127,212 feet of rough lumber, valued at $19,500.

The Sadler, Dundas & Flavelle Milling Co., of Lindsay, Ont., are not taking out any logs this winter. Their saw mill will not be operated during the coming season.

Messrs. Wm. Russell & Co., who have the contract for the construction of the Pembroke Southern Railway, expect to take out this winter about 55,000 ties and about half a million feet of trestle timber.

Mill men having stock for sale should watch carefully each week the announcements in our advertising pages. In this issue Messrs. Thomas Meaney & Co. state that they are in the market for coffin boards.

Messrs. J. B. Klock and George Perley, the well-known lumbermen of Ottawa, are taking out square timber exclusively on their Georgian Bay limits this winter. Some four camps of men are engaged on the work.

Messrs. Miller & Woodman, of St. John, N.B., shipped last week to Grenada, per schooner Viola, 139,800 feet pine boards, 5,014 ft. plank, 10,027 ft. boards, 110,000 clear cedar shingles, 30,000 spruce shingles and 5,000 spruce clapboards.

The following timber berths were sold at Fredericton, N.B., last week: Head of N. W. Oromocto Lake, three miles, to Geo. Wood, at $52 per mile; between Salmon and Richibucto rivers, at the Portage, 2½ miles, to W. J. Cameron, at upset price.

FOREIGN.

Saginaw manufacturers report a good demand for common grades, at firm prices. The box material requirement is quite large.

Pine shingles are regarded as good property at Manistee, Mich., the selling price on car being $2. Cedars have sold at $1.90.

Huges & Atley, of Chicago, lately shipped from their stock at Sagola, northern Michigan, three car loads of deals to Germany.

The Ashland Lumber Co., of Ashland, Wis., will cut a large amount of Norway lumber next season, making a specialty of car material.

A Tonawanda firm last week sold 14 cars for shipment to the West Indies, the sale being negotiated through Jimenis & Co., of New York.

Elm continues scarce at Boston, and there is a steady call for oak. There is a good demand for maple flooring, but the price is unsatisfactory.

Spruce frames at Boston continue easy at $13.50 to $14. Even at these prices the call for stock is light. Boards are called for to some extent by the manufacturers.

At Buffalo the late advance of 50 cents on hemlock has been maintained. There is a small boom in the box trade, although no change in prices has as yet taken place.

The recent advance in Washington in red cedar shingles has placed the price of them in the eastern market above that of white pine, which has tended to strengthen the market for the latter.

Of the hardwood demand the Northwestern Lumberman says: In the hardwood line the demand at all western and southern points during the month has been a pronounced improvement on trade in January of last year. Stocks of dry oak are short all over the south, so that dealers in the northwest who need lumber to fill current orders are having some difficulty in picking up enough for their purpose. There is a good movement of Michigan and Wisconsin lumber, the revival of furniture, moulding and kindred manufacture having caused an enlargement of demand. At Minneapolis a gain in recent trade is reported, and prospects for the season are bright. The unfavorable winter for getting logs to the mills is likely to strengthen the market and stiffen prices.

## LUMBER STATISTICS.

The Northwestern Lumberman publishes some interesting statistics of the cut of the mills of the Northwest during 1897. The total output exceeded that of the previous year by 507,690,965 feet, the respective totals being 6,233,454,000 and 5,725,763,035 feet.

The mills at Minneapolis and in the country to the north of that city, those on the river below Minneapolis, those in the St. Croix, Chippewa river and Black river valleys, in the Duluth and Ashland districts, and on the St. Paul, Minneapolis & Omaha and Wisconsin Central railways, all made gains last year over the cut of 1896. The cut was also increased in the Wisconsin river valley, but the output on the St. Paul, Minneapolis & Sault Ste. Marie road shows a remarkable falling off. There was also a decline on the Ashland branch of the Chicago & Northwestern. The total output west of the Chicago district last year was 528,000,000 feet more than in 1896.

Norwithstanding the increased production as shown above, the stocks at hand at the close of the sawing season show a decrease of 50,393,000. The consumption during the year must, therefore, have increased to the extent of 558,083,965 feet. All but the Wisconsin valley, the Soo Railway, the Ashland branch and the east Wisconsin mills have more lumber on hand than they had at the close of last year.

The Saginaw valley mills increased their cut last year a few millions of feet, while the product of the Huron shore declined 56,000,000 feet. Stocks on hand in the Saginaw valley are less by 56,000,000 feet. The comparison of stocks on hand at the Huron shore mills is 38,600,000 at the close of 1897 and 45,977,000 at the end of 1896.

The comparative increase in the output of shingles was 414,708,000. Stocks on hand are 46,173,000, against 635,500,000 at the close of 1896.

## BUSINESS NOTES.

The business of the Canton Lumber Company, Canton, N.Y., is reported in possession of the sheriff.

Berthiaume & Steep, saw mill, Sebastapool township, have assigned to John Devine, of Renfrew. The creditors will meet on January 29th.

Fletcher, Pack & Co., of Alpena, one of the most successful lumber concerns in Michigan, dissolved last week. The firm was composed of Geo. N. Fletcher, of Detroit, F. W. Fletcher and Albert Pack, of Alpena.

## LOGS FOR EXPORT.

From figures furnished by the Crown timber agents, the Commissioner of Crown Lands submitted to the Ontario Government the following statement of the quantity of logs to be exported by the respective firms:

| | Feet. |
|---|---|
| Edmund Hall | 7,000,000 |
| Eddy Bros. | 10,000,000 |
| Charlton | 3,500,000 |
| Turner & Fisher | 15,000,000 |
| Central Lumber Company | 8,000,000 |
| Alger Smith | 8,250,000 |
| Wm. Peters | 6,000,000 |
| Saginaw Lumber Company | 5,000,000 |
| R. C Lippincott | 3,000,000 |
| Hardy Lumber Company | 12,000,000 |
| S. G. M. Gates | 18,000,000 |
| Delta Lumber Company | 5,000,000 |
| Hale & Booth | 12,000,000 |
| Collins' Inlet Lumber Company | 2,000,000 |
| Spanish River Company | 13,000,000 |
| S. O. Fisher | 12,000,000 |
| Loveland, Roys & Company | 5,000,000 |
| McArthur Bros | 12,000,000 |

The above returns give a total of 156,750,000 feet. This will no doubt be considerably increased, as no estimate of the cut of Pitts & Co., Albert Pack, Booth & Shannon, Munro & Gordon, and others likely to export, is given. It is probable that the total quantity of logs cut for export this winter will slightly exceed that of last year, the figures for which were 219,026,000 feet.

## THE OTTAWA VALLEY.

[Correspondence of the CANADA LUMBERMAN.]

The year 1898 has opened with fairly bright prospects for the lumber trade of the Ottawa valley, and when all the gloomy prognostications that were indulged in some months ago are taken into consideration, the prospects may be said to be good. While the sales are not large at present, which is usually the case at this season of the year, the exporters of lumber, and they are largely the mill owners, are getting prices which are a slight advance on those of last year. This may be translated in these words, the producer and consumer are dividing the two dollar duty between them, for whilst it is true that the duty was not in force last year, yet it is a fact that in making contracts it was anticipated.

The output of square and waney pine in the Ottawa and Georgian Bay districts this winter will amount to some 3,250,000 cubic ft., which is a slight increase over the output of last year. On the other hand, the estimated quantity of logs being taken out this winter shows a considerable decrease in the Ottawa valley district, though there will be a probable increase in the Georgian Bay district. As near as can be gathered there will be a shortage in the Ottawa valley equal to about thirty per cent.

Despite the doleful forebodings that, owing to the engineers' strike, the British market would show a decided falling off, the contracts that have been entered into prove that trade to be very steady. All the deals for the British market have been disposed of, at practically last year's prices. Messrs. J. R. Booth, the Hull Lumber Company, Gilmour & Co., Gilmour & Hughson, Edwards & Co., Limited, and the Hawkesbury Lumber Company have sold from 50 to 60 per cent. of their entire output. This virtually means a renewal of last year's contracts, showing that the British market is keeping up.

No large contracts, as far as I can ascertain, have yet been made for the United States market, though firms like J. R. Booth, who have yards on the American side, are still shipping in order to keep up their stock and meet existing obligations. At the present time 12 inch stock is strong, and it looks as though 10 inch boards would be scarce. There is considerable enquiry from the Argentine Republic for some of these stocks, and from present indications it looks probable that a brisk trade may spring up. Some intimations that a trade may be opened with South Africa have been given, but so far these have not assumed any practical shape. It is a little early to give any forecast of the spring trade, but the probabilities are that this can be safely done within a very few weeks,

OTTAWA, Jan. 22nd, 1898.

The schooner Georgia has been chartered to take lumber from St. John, N. B., to New York, at $2.50.

Lumber tonnage for South America continues in fair request, with charters reported at $8 and $9 from the provinces to Buenos Ayres and Rosario.

There are many causes for the failure of advertising to produce satisfactory and anticipated results. The advertising of articles which have solid and even unique merits frequently fails to produce a satisfactory volume of business, and the reasons for this are an interesting study. One of the most common causes is that the strong point is not properly and adequately insisted on; in other words, the advertiser does not realize the strength of his own case. Another reason is that generalities are used where specific statements might be made. A yet further reason is that frequently the advertisement insists on a purely subsidiary circumstance, and, to a great extent, omits, or delegates to a subordinate position, the really main argument to which everything ought to be directed.—Printers' Ink.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5 cents per 100 lbs.; Arnprior to Montreal, 7 cents; Parry Sound to Montreal, 12 cents per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. p r 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 bs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs., from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum we ght 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2 20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively: Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, and Michigan Cenrtal Railways, the rate is 14c. per 100 lbs. Regulations apply as to minimum size of carload of 30,000 lbs., and no advanced rate is charged for hardwoods.

Mr. Geo. A. Fowler, lumber agent for the C.P.R., at Ottawa, writes as follows under date of Nov. 17, 1897: The winter rates went into effect on the 15th inst., and in so far as lumber is concerned the only rates which are materially affected by the change are the rates to Montreal, Quebec and points taking same rate. During the summer season we have on seasoned soft wood lumber weighing not more than 3,000 lbs to the M ft. rates as follows to Montreal: From Ottawa $1.00 per M., excess over 3.0 0 lbs. to the M ft. to be charged for at 4 cents per 100 lbs.; from Arnprior, $1.50 per M, excess 6 cents per 100 lbs. The rates to Quebec during summer season are $2.00 per M ft., excess 8 cents per 100 lbs.; from Arnprior $2.50 per M, excess 10 cents per 100 lbs. The rates during the winter season, in effect from 15th inst., on all kinds of lumber to Montreal are, from Ottawa 5 cents per 100 lbs., from Arnprior 7 cents, and to Quebec from Ottawa 10 cents per 100 lbs., Arnprior, 12 cents; minimum carload, 30,000 lbs.

The rates to Boston and New England points, also all rail rates to New York and New York points, remain unchanged.

# THE NEWS.

—A. S. Young has opened a lumber yard at Nelson, B. C.

—Chappell Bros. are erecting a wood-working factory at Windsor, N.S.

—Malcolm McDonald has started a shingle factory at Head River, Ont.

—A. Stewart, of Foxmead, Ont., has recently added a saw carriage, boiler and engine.

—John Wilson, lumber dealer, Rathwell, Man., has disposed of his business to C. Caswell.

—During the season of 1897 Baillie's and Ritchie's mills at Aylmer, Que., cut 14,000,000 feet of lumber.

—The Rathbun Company's factory at Deseronto, Ont., turned out last year 26,000 doors more than in 1896.

—G. Niebergall & Son have purchased the saw mill and property at Camp Palmer, Ont., formerly owned by H. M. Misener.

—A factory for the manufacture of sash and doors is being erected at Eastman, Que., by Thos. Armstrong and E. Schilson.

—The executors of the estate of the late Thos. Willing, of Martintown, Ont., are offering for sale the grist and saw mill at that place.

—J. Cousineau, chief government bush ranger, of Gatineau, Que., returned early in January from a three month's tour of inspection.

—Edson Fitch is having one of his mills at Etchemin, Que., reconstructed for the manufacture of match wood to be exported to England.

—Hon. J. B. Snowball, of Chatham, N. B., is having extensive repairs made to his mill, including four new boilers and a furnace.

—An act was recently passed by the Ontario Legislature to amend the Woodman's Lien Act, making it include pulp wood, cord wood and all forest produce.

—Alex. Watson and R. Davis, stave and heading manufacturers, Kinmount, Ont., have dissolved partnership, the former continuing the business.

—S. Parkin, who has a contract to cut 20,000 ties for McCormack & McLeod, of Orillia, is building a small saw mill adjoining his shingle mill at Lindsay, Ont.

—Mr. F. T. Papscott, missionary at Rat Portage, Ont., states that there is a scarcity of reading matter for the men engaged in the lumber camps in that vicinity.

—Information has reached the Department of Trade and Commerce at Ottawa that there is an excellent market for Canadian inch planed boards in Cape Colony.

—Extensive improvements are being made to the plant of the Royal City Mills, New Westminster, B. C., which will involve an expenditure of $20,000. The Brunette Mills are also being repaired.

—The Canadian Pacific Railway Company is said to have decided to build a steam saw mill, 307 feet long, at the Crow's Nest Pass. The mill will be fitted up by Isaac Kendall, of Ottawa, and will cost over $50,000.

—Hugh Silver, of Lindsay, Ont., who is managing the grained lumber department of the Pacific Coast Lumber Co., of New Westminster, B. C., recently received an order for 13 car loads to be shipped to Rat Portage.

—A large raft containing 5,000,000 feet of lumber is being constructed by the firm of Inman & Poulson, of Portland, Oregon. It will be 396 feet long and 53 feet wide, and will be towed from Portland to San Francisco.

—James Smith & Co., of Liverpool, Eng., report that, notwithstanding the opposition directed against the import of American and Canadian doors, they last year imported into Liverpool and sold considerably over 100,000 doors.

—Owing to increased business, J. Pigget & Sons, of Chatham, Ont., have been compelled to erect an addition to their planing mill. They have also purchased an adjoining lot, which will double the capacity of their piling yards.

—J. C. Graham, manager of the Winnipeg branch of the Rat Portage Lumber Co., reports an active demand for sash and doors. Twelve car loads of British Columbia cedar were recently purchased for working up in the factory.

—Twenty-three Canadian lumbermen were thrown out of employment by the assignment of the Canton Lumber Company, an American concern. They were compelled to walk over one hundred miles to their homes in the vicinity of Ottawa.

—James McNair, of the Hastings Shingle Mfg. Co., Vancouver, B. C., has removed to Whatcom, Wash., having obtained possession of the Cooper shingle mill in that city. Mr. McNair hopes to thus retain his extensive American trade.

—The ownership of 3,000 saw logs recently engaged the attention of the judge of the County Court at Ottawa. Cyprien Charron entered an action to recover 3,000 logs lying in the Nation river from W. H. Barry, but the court decided that Mr. Barry was the proper owner.

—Richard Lockhart, of Riversdale, Ont., has sold his saw mill and timber limits at that place to Zimmer & Kempel, of Formosa. Mr. Lockhart has removed to Emo, in the Rainy River district, where he has joined his father, Mr. John Lockhart, in the saw and flour mill business.

—It is said that doors can be shipped to England and then re-shipped to South Africa for less money than they can be shipped direct from this country. The reason given is that there is no regularly established trade between this company and South Africa, hence the difference in the expense.

—The estate of the late Martin L. Russell, the well-known Ottawa Valley lumberman, of Renfrew, Ont., reference to whose death was made in the January number of the LUMBERMAN, is valued at $100,000, and includes three timber limits on Sturgeon river and valuable water powers at Renfrew and Sturgeon Falls.

—The employees of the Morris, Field Rogers Co., piano manufacturers, of Listowel, Ont., and large consumers of lumber, recently presented their manager, Mr. R. B. Andrews, with a complimentary address, accompanied by a gold-headed cane, in appreciation of the pleasant relations existing between the company and employees.

—The Fredericton Boom Company, which handles all the logs from the upper waters of the St. John river, in New Brunswick, has declared an annual dividend of 12 per cent. Directors of the company have been elected as follows: A. F. Randolph, president and treasurer; H. J. Olive, secretary; C. F. Woodman, W. H. Murray, Chas. W. King, E. L. Jewett and E. G. Dunn.

—The Columbia River Lumber Co. have, after two months of negotiations, purchased the plant, limits and proprietary interests of the Golden Lumber Co., of Golden, B. C. Mr. Carlin, formerly manager of the Golden Lumber Co., will be manager of the combined concern, and W. C. Neilson secretary-treasurer. The company have half a dozen camps in the woods this winter.

—Prof. Wilson, of St. Catharines, has submitted to the Ottawa lumbermen a scheme for utilizing sawdust and other refuse for the manufacture of calcium carbide. The process converts the refuse into carbon, which is then powdered and mixed in equal quantities with limestone, the whole being subjected to the heat of an intense electrical current. When cooled the mass is broken into small lumps and shipped to consumers in tin cans, for conversion into acetylene gas.

—The Nova Scotia Lumber Company, of Sherbrooke, N.S., whose saw mill was destroyed by fire last summer, have erected a new mill situated about one and a half miles below the village. The machinery therein consists of gang, rotary, lath, planing and shingle machines, requiring about 140 horse power to operate them. The company expect to manufacture about 10,000,000 feet of lumber this year. The bulk of the lumber manufactured at this mill is towed in rafts a distance of about 20 miles, to the harbor of Liscombe, for shipment.

## TRADE NOTES.

The plant of the Phelps Machine Co., of Eastman, Que., has been bought out by the Jenckes Machine Co., of Sherbrooke, who will continue the manufacture of the Dake engine in their Sherbrooke works.

The renowned LeRoi mines, of Rossland, B.C., are extending their pumping system, and have placed an order through the Rossland branch of the Jenckes Machine Co., Sherbrooke, Que., for a large size special Knowles sinking pump.

The Pembroke Lumber Company, manufacturers of red and white pine lumber, dimension timber, joisting, etc., have issued their new stock list, which shows a wide variety of stock. The company are prepared to dispose of much of this stock at reduced prices, and intending purchasers might find it advantageous to write for quotations before placing orders.

The Virginia mines at Rossland have passed the preliminary stage, and will now enter the list of shippers. An order for a large hoisting plant, with boilers, has been placed with the Rossland branch of the Jenckes Machine Co., of Sherbrooke, and is now on the way from the east.

The Three Rivers Iron Works Co., of Three Rivers, Que., are building a new iron foundry, brass foundry and machine shop. The company is branching out into a new department, namely, the manufacture of paper and pulp machinery, in which line they hope to build up a profitable business. The establishment is now lighted by a private electric light plant.

A circular from Glasgow, Scotland, announces the formation of a new firm of timber brokers, Messrs. Calder, Henderson and Livingstone. For the past 20 years the members of the above firm have been actively connected with Messrs. Allison, Cousland & Co., timber brokers, of that city, during which time they have obtained such experience as should ensure for them a fair share of patronage. They will handle Canadian timber.

Messrs. Wickes Bros., of Saginaw, Mich., have issued a new stock list of second-hand machinery, which is larger than any heretofore issued. Their stock is shown to consist of all classes of boilers and engines, saw mill, shingle mill, cooperage, filing room and woodworking machinery, fans, blowers, etc., as well as the equipment of complete mills which have not been dismantled. The company state that they have engines from 2 to 660 h.p., and saw mill outfits from the plantation style that can be loaded on a lumber wagon to a mammoth plant with six band saws and three gangs, capable of cutting over twenty million feet of lumber in a season.

The Dodge Wood Split Pulley Company, of Toronto, have issued a most complete catalogue of their patent wood split pulleys and power transmission appliances. It contains nearly 300 pages, in which are to be found many valuable tables and numerous illustrations. The preface says: "Our aims and efforts are constantly directed towards the perfecting of power transmitting machinery and the advancement of the practice governing the usages of this very important branch of mechanics. The present age is one of practice and economy; it therefore behoves every owner, or prospective owner, of a power plant to familiarize himself with the best practice in transmission engineering. Money saved at the coal pile means larger dividends for the stockholders."

# Two Canadian Saw Mills for Sale Cheap

One, a Lumber Mill with Gang, Band and two Circulars, driven by Water Wheels, with two Edgers, two Trimmers, one Slasher, Lath Mill, Bolter, three Log Jackers, Shafting, Pulleys, Belting, Saws, etc. Also an Electric Light Plant.

One, a Timber Mill with Stearns' Circular, one Edger, one Trimmer, one Slasher, one Log Jacker, all Shafting, Pulleys, Belting, Saws, etc.; also Water Wheels. Georgian Bay Delivery.

FULL PARTICULARS ON INQUIRY

WICKES BROS., Saginaw, Mich.

## TRADE NOTES.

A good lumber dryer is an important and necessary adjunct to modern saw and planing mills. See what the Standard Dry Kiln Co., of Indianapolis, Ind., have to offer in this line, as set forth in their advertisement on upper right corner of 3rd cover page of this issue. By writing them, making mention of the CANADA LUMBERMAN, you will receive further particulars.

The attention of our readers is directed to the announcements in our advertisement pages of the following American firms, who are desirous of extending their business relations with Canadian lumber manufacturers :— Messrs. W. B. Mershon & Co., manufacturers of band re-saws, Saginaw, Mich.; Messrs. Baldwin, Tuthill & Bolton, makers of saw-fitting machines and tools, Grand Rapids, Mich., (who offer to send free a 200-page catalogue to persons who write them mentioning the CANADA LUMBERMAN) ; Messrs. Wickes Bros., makers of new and dealers in second-hand saw and wood-working machinery, Saginaw, Mich.

The Waterous Company, of Brantford, Ont., are very busy with orders, which keep their staff of 300 employees working full time. The following shipments were made during the month of January : 9 cars to Tracadie Lumber Co., Tracadie, N. B.; complete band mill, with steam acting machinery throughout, pulp-wood cutting-off plant, with 8 barkers, to the Maritime Sulphite Fibre Co., Chatham, N. B.; band mill carriage, heavy edger and band saw tools to Hull Lumber Co., Ottawa ; 10 and 20 x 14 tandem compound marine engine, with 84 x 108 Clyde boiler, shell all in one sheet, for 156 lbs., to Capt. A. Campbell, Nelson, B.C.; Clyde marine boiler to Capt. Sanderson, Nelson, B. C.; portable engine and wood-working machinery to Courtney & Raworth, Sackville, N.B.; 30 h.p. engine and boiler to James F. Templeman, Burk's Falls, Ont. The Rathbun Company, of Deseronto, have just closed with the company for an Allis band mill, steel girder carriage and steam acting machinery. The Allis band mill appears to be growing in favor, over 50 being in operation in Canada.

## PERSONAL.

Mr. W. H. Winnett, lumber and coal merchant, of London, Ont., was re-elected to the City Council at the late elections, this being his fourth term. He has been elected chairman of the Finance Committee. Ald. Winnett was one of those on the platform in the City Hall disaster, but fortunately came out without serious injury.

It is with pleasure that we observe that Dr. Robt. Bell, L.L.D., B.A.Sc., F.R.S.C., of the Geological Survey, Ottawa, has been elected a Fellow of the Royal Society of London. This is considered the greatest honor of the scientific world, yet one which is well deserved by Dr. Bell. He has made a careful study of zoology and botany, and more especially of the forestry question, having issued such valuable publications as the following : "The Forests of Canada ;" Forest Fires in Northern Canada," and "The Geographical Distribution of Forest Trees in Canada." The last named report will be reviewed at greater length in a future issue.

## CREDIT OMITTED.

In connection with the story published in our January number, entitled "Dour Davie's Drive," it should have been stated that the author thereof is Mr. E. W. Thomson, and that it first appeared in the Youth's Companion, of Boston. Our apologies are due Mr. Thomson for the omission.

# WOOD PULP DEPARTMENT

## EXPORT OF PULP AND PAPER.

THAT the manufacture of pulp and paper in Canada will, in the near future, become one of the most important industries of the country, will scarcely be disputed. This is daily exemplified by the reports which come to hand of new mills being erected or contemplated throughout the Dominion, but more especially in Quebec and the maritime provinces, where excellent shipping facilities to the European market, and an abundance of the best spruce wood, offer advantages not elsewhere obtainable. Two propositions for the erection of pulp mills are now before the City Council of St. John, N.B., one from Messrs. A. Cushing & Co., and the other from Mr. Julius Spiro, of New York. In the interests of the country it is very desirable that these proposed mills should be erected, and the city council will act wisely by giving such concessions, provided they are within reason, as will insure the location of the mills in the vicinity.

The paper making industry is also growing, but less rapidly. The energetic efforts of Lord Strathcone, the Canadian High Commissioner in London, promise to greatly assist in extending this industry. The United Kingdom offers a large market for Canadian paper, the consumption there being valued at over a million dollars per month. In a letter to Sir Richard Cartwright, the High Commissioner says : "England imports more than £200,000 worth of paper every month, and during this year there has been a decline in the imports from all countries except America. This is very suggestive, for Canada makes paper of similar characteristics to the American make. One is therefore naturally confronted with the question, 'Why should not Canada use her pulp in making paper for the Mother Country, instead of supplying her neighbor with the material to do so?'" The High Commissioner adds that he intends to come to Canada soon to interview the pulp and paper manufacturers regarding the opportunities afforded by the British market.

Mr. George Mawson, a London paper dealer, arrived in Ottawa recently bearing letters of introduction from Lord Strathcone to Sir Richard Cartwright and other members of the Dominion government. His object is to work up an export trade in paper between Canada and England. He points out that Canada is a large seller of pulp wood and pulp to the United States, from which country England buys a considerable quantity of paper, the product of Canadian material. He thinks that there is no reason, therefore, why Canada should not do a large paper trade with Britain.

## PULP AND PAPER MAKERS' FELTS.

Hamelin & Ayres, Lachute Mills, Que., manufacturers of pulp and paper makers' felts, are rushed with orders, and to keep up with the demand they have ordered two more 260 inch looms. The following are some of the orders filled by this firm during the six weeks ending 30th December, 1897 : The Acadia Pulp & Paper Co., Halifax, 35 felts ; Chicoutimi Pulp Co., Chicoutimi, Que., 16 felts ; Dominion Pulp Co., Chatham, N.B., 8 sulphite felts ; the Maritime Sulphite Fibre Co., Chatham, N. B., four ; the Nova Scotia Wood Pulp & Paper Co., Mill Village, N. S., six ; the Sissiboo Falls Pulp Co., Weymouth Bridge, N.S., nine ; National Paper Co., Indian Lorette, four ; Messrs. Jos. Ford & Co., Portneuf, Que., eight ; the Maple Card & Paper Co., Portneuf, four ; the Portneuf Paper Co., six ; the Montreal Paper Co., Portneuf and Basile, twelve ; Laurentide Pulp Co., Grand Mere, twelve ; Canada Paper Co., six ; the Royal Paper Mills, East Angus, Que., four ; Alex. McArthur & Co., Joliette, Que., two ; W. B. Gifford, Sault au Recollet, four ; Messrs. J. C. Wilson & Co., St. Jerome, Que., eight ; J. C. Wilson & Co, Lachute, four ; Toronto Paper Co., Cornwall, two ; Jas. Stutt & Sons, West Flambora, four ; Taylor Bros., Toronto, eight ; Riordan Paper Mills, Merritton, Ont., 24 ; Jas. Davy, Thorold, Ont., six. Orders for January are said to have exceeded those of November and December. Hamelin & Ayers started into the felt business about twelve years ago, and the quality of their goods, together with fair dealing, has brought them a very large trade in that line. The different lines that are manufactured by the firm are quite numerous, and give employment to upwards of 100 employees, and what was a wilderness 15 years ago is now a progressive town and a regular bee hive of industry ; but, as Mr. Ayers says, a bee hive without drones, all workers, hence the prosperity.

## PULP NOTES.

The Royal Paper Mills Company, of Montreal, will erect a paper making plant adjacent to its pulp mill at East Angus, Que.

The St. Croix Paper Mills are erecting a building at Hartville, N.B., in which to manufacture tar paper. In the spring a large stock house will be erected.

Two carloads of screens from the Jenckes Machine Co., Sherbrooke, Que., were recently received at the mills of the Chicoutimi Pulp Co., Chicoutimi, Que.

The total quantity of wood pulp imported into England last year was 327,080 tons, more than three-fourths of which was from Norway and Sweden, Canada only supplying 2,714 tons.

The new pulp mills of the Royal Paper Mills Co., at East Angus, Que., are rapidly nearing completion. The contract for the entire tank work has been awarded to the Jenckes Machine Co., Sherbrooke, Que.

The Lake Bouchette Pulp Company is applying for incorporation, to manufacture pulp, paper, lumber, etc. The head office will be in the city of Quebec, and the capital stock is placed at $200,000. Among those interested are J. I. Lavery, of Quebec, and Damase Galbert, of Lake Bouchette.

Work on the new pulp mills of Hamelin & Ayers at Erlesville, near Lachute, Que., is being pushed to completion, and from present appearances will be in full operation before spring, with 8 two-pocket pulp grinders. This mill will have an output of 20 tons dry weight per day of 24 hours, all of which has been contracted for in the European markets.

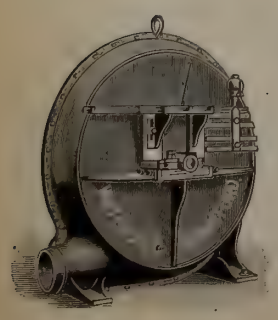
Water was let into the penstock at the pulp mills of the Chicoutimi Pulp Company, Chicoutimi, Que., on the 15th December last. The development of the water power in connection with the mill was undertaken by the Jenckes Machine Co., of Sherbrooke, Que., who used four of their special Crocker wheels for the purpose. The wheels give excellent satisfaction under a head of 70 feet.

**FELTS FOR PULP MILLS** 20 years in the business — the first to make Felts in Canada; capacity 1,000 lbs. per day. All our Felts are woven endless, without a splice. Our Felts will last longer and make dryer Pulp. All up-to-date mills use our Felts. New mills, when in need, write for samples and prices.

**HAMELIN & AYERS, Lachute Mills, P.Q.**

**WATEROUS....**

# IMPROVED PULP WOOD BARKER



Frame of large size and circular shape. No clogging with shavings---built in two pieces, with planed and fitted joint. Knife Disc 52 in. diameter, very heavy, held by steel band shrunk on edge ; turned and perfectly balanced ; takes four knives 11½ in. long.

Capacity 7 to 10 cords per day. Speed 600. Shipping weight 3,600. F. & L. Pulley 16 in. x 5½ in.

Adjustable Tightener---adjusted by screws and one crank---enables 16 x 12 Pulley to be used on Barker. Considered better for fast heavy work than tight and loose pulleys.

**BUTTERFIELD'S AUTOMATIC BARKING ATTACHMENT** can be applied to the Waterous or any Barker. It increases capacity 80 to 100 per cent., and saves 5 to 8 per cent. of the wood---that is, when this attachment is used you get 5 to 8 per cent. more Pulp Wood from the same unbarked logs.

A large number of Barkers and Barker Attachments sold during 1897. References on application.

**WATEROUS, Brantford, Canada**

## IMPORTANT INJUNCTION SUIT.

THE Magnolia Metal Co., whose trade extends to every part of the United States and Canada, and to every civilized country in the world, has had, during the last two or three years, numerous suits with parties infringing their trade marks and patents. An injunction was granted on December 15th, 1897, by Lord Chief Justice Russell, in the Queen's Bench Division of the High Court of Justice, London, England, enjoining the Tandem Smelting Syndicate, Ltd., and restraining them from passing off their metal for Magnolia Metal, it being made up so as to counterfeit Magnolia Metal.

Another case is as follows: A few months ago the Globe Engineering Co., Ltd., of Manchester (now in liquidation), shipped a quantity of metal to a firm in South Africa that had ordered Magnolia Metal. The metal sent to fill this order was made up into ingots as near as possible to represent the well-known ingots of Magnolia anti-friction metal. They bore the words, "Magnolia Anti-Friction Metal," but the trade mark, the Magnolia flower, which is shown herewith, and the words, "Patented June 3rd, 1890," were not imprinted upon them. The purchaser brought an action in the High Court of Justice, at the Manchester assizes, against the sellers, and judgment was given in his favor by the arbitrator to whom the matter was referred.

The Magnolia Metal Co. desires to warn the public against fraudulent imitations. Genuine Magnolia Anti-Friction Metal is made up into bars, of which the cut below is a fac-simile, and the trade mark and name are

always stamped on bars and boxes; and besides this the words, "Patented June 3rd, 1890," and "Manufactured in U. S." are stamped on the under side of each bar. The Magnolia flower trade mark is registered in every civilized country in the world.

The Magnolia Metal Company, of 266 West street, New York, advise us that similar frauds are being committed in this country at this time, and they offer one thousand dollars reward to any party causing the arrest and conviction of any individual or firm infringing their trade marks or patents.

## UTILIZING PINE STUMPS.

IN a recent issue of THE LUMBERMAN a short article was reprinted from the Manufacturers' Gazette, referring to a method of utilizing pine stumps for the manufacture of pyroligneous acid. It was stated that a plant for this purpose could be built in the shape of retorts, each retort of sufficient size for one-half cord of wood, at an outside expense of $300, and that a good profit could be made with a small outlay. We have since received numerous inquiries regarding the method referred to, but have been unable to obtain any further information. Should any of our readers be in a position to furnish particulars, or state where such a retort may be obtained, they are asked to communicate with the publisher of this journal.

William Carson, a millionaire lumberman, died at Eau Claire, Wis., on January 5th, at the age of 80 years.

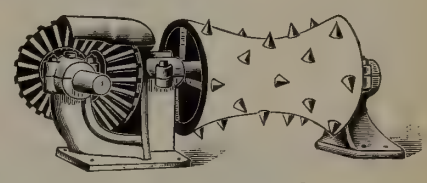
Automatic Cutting Off Machinery
FOR PULP WOOD

SPIKED LOG JACK ROLL.

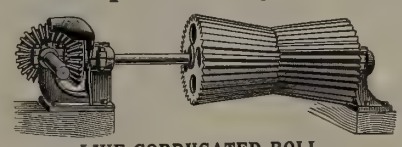
THIS Machinery enables two men to take from the pond and cut into 16 to 24 inch lengths 50 to 90 cords of Pulp Wood per day, delivering it to Barkers, or when shipped unbarked delivering to car.

One Double Plant is handling 200 cords of 4 foot wood per 10 hours, delivering to 4 cars at once, and two men to each car load it.



LIVE SPIKED ROLL.

We placed many Complete Plants in 1897, nearly all bought to replace other methods on account of great economy in handling, giving everywhere such satisfaction as to lead to further orders.



LIVE CORRUGATED ROLL.

## PUBLICATIONS.

The Wood, Barker Company, wholesale lumber dealers, Boston, have sent us an artistic calendar. The illustration is a view of the Common, showing entrance to subway, with state house in the distance.

The nineteenth annual special issue of the Tradesman, of Chattanooga, Tenn., does credit to the publishers. It contains 240 pages, in which the various industries of the south are reviewed in an able manner. There is also abundant evidence that the journal is appreciated by its advertisers.

A copy of the proceedings of the American Forestry Association at special meetings held at Asheville, N. C., and Nashville, Tenn., September 17-22, 1897, has reached our desk. Among the many valuable papers printed therein are the following: "Effect of Forest Denudation on Water Courses and Water Supply," by Mr. D. W. Baird.; "Forest Finance," by Dr. C. A. Schenck; "Forest and Rainfall," by Mr. H. A. Hazen; "Stream Flow in Relation to Forests," by George S. Rafter.

**The LUMBERMAN is issued fifty-two times a year for $1.00. Can you afford to do without it?**

## A LIVE PAPER.

MR. John Stanford, Chester, Ont., in remitting his subscription to THE LUMBERMAN, writes: "It is a live paper; am much pleased with it, and think every woodworker in the Dominion should take it."

W. W. Carter, of Fesserton, has purchased the mill and limits of A. McPherson at that place.

The Jenckes Machine Co., Sherbrooke, Que., are furnishing the Canadian Rand Drill Co., Halifax branch, with one of their 20" Crocker special turbines, to be used in connection with the extensive hoisting plant being installed by the Drill Company at the Torquoy mines.

Co., 506 Central Station, Chicago.

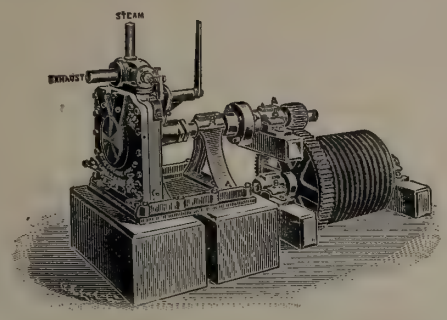
THE

# DAKE STEAM FEED



Embodies the following Advantages:

SIMPLICITY OF CONSTRUCTION,
POSITIVE AND EASY MANAGEMENT,
ECONOMICAL USE OF STEAM,
SMALL SPACE OCCUPIED,
CHEAPNESS,
EASY ADAPTATION TO EITHER NEW MILLS OR THOSE NOW IN USE.

The movement of the engine in either direction is under the absolute control of the sawyer, thus accommodating the speed of the feed to the size of the logs.

Mill men who have used other makes of Steam Feeds comment favorably on the economical use of steam of our feed over others.

## This Saw Stands Without a Rival

AND IS THE

**FASTEST CUTTING SAW IN THE WORLD!**

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

## Maple Leaf Saw Set

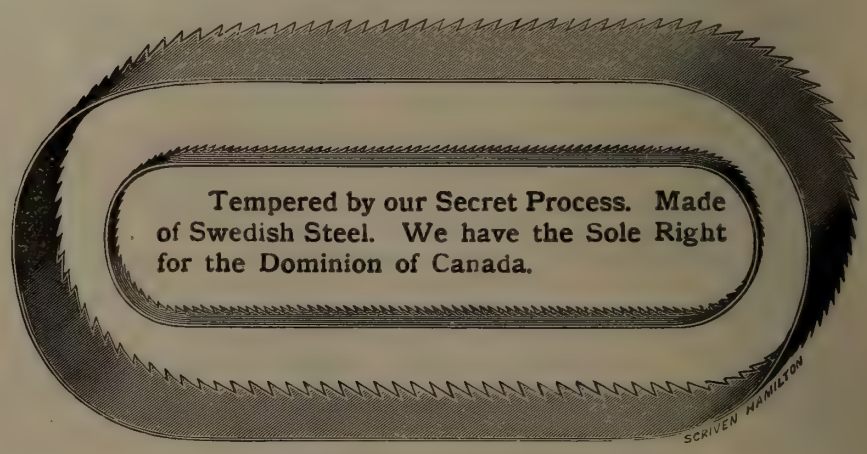
MANUFACTURED BY

**SHURLY & DIETRICH, Galt, Ont.**

**Directions.**—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

# HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

## MR. J. WILLIAM WILLISON.

THE Dominion Government have appointed Mr. J. William Willison, of Toronto, as Crown Timber Agent for the Yukon district. On Monday, February 14th, he left for Vancouver, where he expected to join his assistant, Mr. T. D. McFarlane, of Brandon. Before this time they have, perhaps, sailed for Dyea, and will enter the interior by either the Chilcoot or White Pass route.

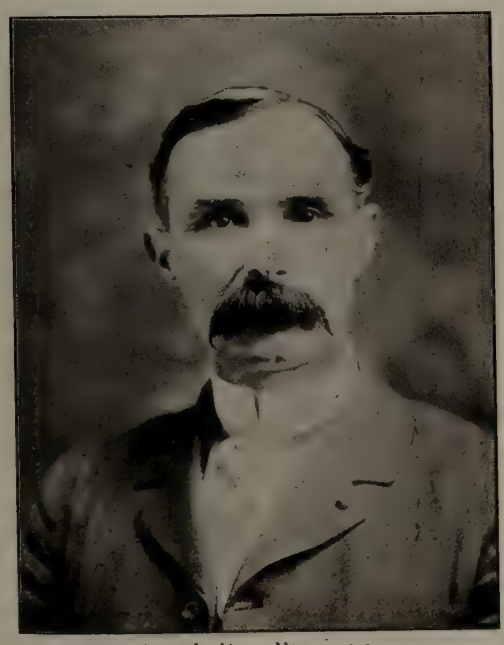
The development of the gold resources of the Yukon country has created a large demand for lumber, and it is the intention of the Department of Interior, through its agents, to ascertain the extent of the lumber supply. Mr. Willison will proceed first to Lake Bennett, where the government has already sold a few timber berths, whence he will journey to Lake Lebarge, near the junction of the Teslin and Lewes rivers. Fort Selkirk, at the junction of the Lewes and Pelly rivers (only 170 miles from Dawson City), will next be visited. Here he will turn south and go down the Teslin river and lake to the terminus of the proposed new railway.

On the banks of the many rivers which are tributary to the Yukon, there are known to exist considerable timber areas. Mr. Willison will look hurriedly over the ground, ascertain the character and value of the timber, find if any poaching is going on, set the law in operation, and report to the government. As all the rivers referred to empty towards Dawson City, the logs will in the natural order of things be rafted to convenient points near that metropolis, where large saw milling plants may be erected.

The appointment of Mr. Willison is one which gives general satisfaction, his while past experience is certain to secure for the government good results. He is not only one of the best timber experts in Canada, but a man eminently qualified for the complicated duties of administering the law and investigating the timber resources of the country.

About twenty years ago Mr. Willison came to Canada, a young, ambitious Englishman, and went to work in the lumber shanties of Mr. John Stewart, north of Orillia. There he determined to learn the business thoroughly, and devoted his energy to study in that best possible school. When Mr. Stewart went as explorer for the Rainy River Lumber Company he chose Mr. Willison from among his old employees as his assistant. The experience of those pioneer lumbering operations will prove invaluable in the Yukon, for Mr. Willison has travelled back and forth through the Rainy Lake and Rainy River district by dog team, has slept out with the thermometer away below zero, has made many long journeys on snowshoes, and has become accustomed to "roughing it" under most onerous conditions.

The new appointee has had the full round of experience, shanty building, felling timber, hauling, boom building and river driving. In summer he went into the lumber mills, where he passed through all the technical graduations of work, from tail sawyer to double edger, filer, sawyer, and eventually manager. He left the employ of the Rainy River Lumber Company to take a position with Macdonald & Shields, a lumber firm operating on Vermillion Bay, east of Rat Portage. With a jobber under that firm he had the direction of many important contracts, among them the getting out of 3,000,000 ties for the Canadian Pacific Railway. Mr. Willison also went into contracting on his own account, getting out supplies for several firms, among them Mather & Co., of the Keewatin Mills. His experience included extensive prospecting



MR. J. WM. WILLISON,
Crown Timber Agent for the Yukon District.

for timber for many jobbers and mill owners, and a season in the mills of Bulmer & Co., of Keewatin. When the Northwest rebellion broke out he was completing a contract to take out piles for the Canadian Pacific Railway. He went to the Northwest with the Rat Portage contingent of the 91st Winnipeg Battalion, under Col. Scott, and as senior color-sergeant and acting sergeant-major was distinguished as an excellent disciplinarian.

After the rebellion Mr. Willison came back to North Orillia and accepted a position with Drinkwater Bros., who had extensive limits on the North river. With that firm he had charge of the work of getting out logs and of scaling or measuring the logs taken out by contractors and jobbers. He had direction of much of their engineering work, including the construction of the big dam on North river, and his business management extended from the purchase of standing timber to the sale of sawn lumber. As manager and foreman of the saw mill he had an experience of exceptional value in estimating the capacity of logs and standing timber. Measuring logs in the bush and estimating their contents in sawn lumber according to established rules is a familiar operation, but few cullers or scalers have the advantage of afterwards verifying all kinds of measurements and all kinds of timber by the practical test of the sawmill.

During the boom in Orillia Mr. Willison had a remunerative position as salesman with Drinkwater Bros., in which capacity he supplied a large part of the lumber used in those active building operations. All the leading men of the town speak highly of his knowledge as a lumber expert, as well as his business ability. The firm of Thompson & Dunn, with whom he had his first experience as a scaler of logs, express the highest appreciation of the value of his services.

Being thrown largely upon his own resources early in life, Mr. Willison was deprived of the opportunity of securing a good education, which he found in later years to be a great detriment. This prompted him to seek a position in Toronto, where the advantages of night schools could be obtained. The position of superintendent of the Massey Manufacturing Company's lumber yard was then vacant, and it is sufficient to say that out of some eighty applications that of Mr. Willison was accepted. Besides having charge of the lumber yard, carrying from four to five million feet of hardwood in stock, he also had the superintendence of all the raw material. While in that position he had business relations with many of the leading lumber dealers of Canada. To fit himself to enter a field which he then had in view he attended school five nights a week, and was given first prize for shorthand at the west end Y.M.C.A. After four years' connection with the Massey Manufacturing Company he decided to enter the open profession, and has been for two years a member of the reportorial staff of the Toronto Globe.

Mr. Willison has always enjoyed the esteem and confidence of his employers and the respect of those with whom he has had business relations. The many testimonials which led the Interior Department to secure his services are from the leading lumbermen and lumber dealers of the province, from the Massey Company, and from others aware of his special qualifications as an expert.

In his new field of labor we wish him that success which his energy and ability merit.

## HE APPRECIATES ITS VALUE.

Mr. Cornelieus Degraw, of Strathroy, writes: "I am a subscriber to the CANADA LUMBERMAN, and cannot compliment you too highly on the value of the paper to all lumbermen."

It is stated that in the Forestry building at the Centennial Exposition at Nashville, Tenn., 45 different kinds of hardwoods were exhibited in one collection, all from one Tennessee farm.

## TENSION—WHAT IS IT AND HOW TO OBTAIN IT.

TENSION in a saw is a preparation of the saw to do a specific work by compensating in advance for certain conditions known to arise during the operation of sawing. During the hardening and tempering processes, according to the thinness of the blade, it runs in various forms of bends and twists; in band saws it often deviates from a true line flatwise, edges still remaining parallel, but having run in a serpentine form. It is the work of the expert saw-maker to correct these inequalities arising during the process of manufacture. The saw is also susceptible to modifications in form arising from its use in the mill, and it is the work of the expert saw filer to correct such inequalities thus arising during use.

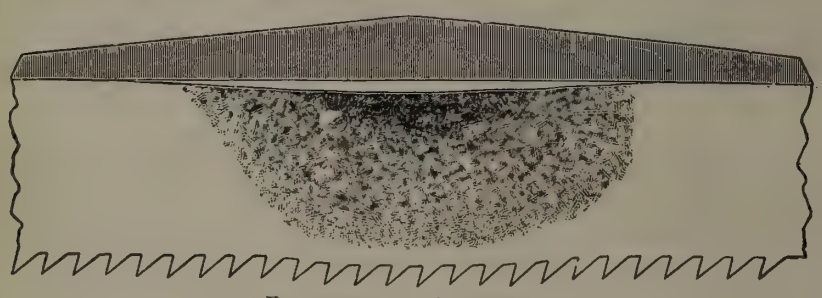
The tensioning of a band saw ought to be more easily understood and reduced to a system than the tensioning of a circular, for the reason that band saws are, for the most part, run of an even width, with the same relative tension, whatever the width, while the circular saw varies with different diameters, speeds and conditions of use. In a band saw, by a constant and proper use of the straight edge and tension gauge, the drop may be regulated to a nicety. An able filer, as a result of study and investigation, should arrive at a condition for the fitting of his saws, to suit the particular band mill and the work in hand, that should continue practically uniform. A filer that is able to keep his saws in condition to accomplish uniform and satisfactory results is entitled to and may expect good remuneration for his effort, while his employer may likewise expect a proper daily average output.

To secure the proper action of the saw teeth, the toothed edge of the saw should be the shortest or firmest. The tendency of the saw while in operation, and as a result of the processes of sharpening and swaging, is toward a "fast" condition, that is, an expansion of the edges longer than the central portions. This tendency must be constantly counteracted by the processes of hammering or rolling for tension, whereby the central portions of the saw are expanded and made longer than the edges, and the back edge made longer than the toothed edge, in various degrees. The weight or strain used on the mill is calculated to create a frictional contact between the saw blade, which is simply a belt of steel, and the band wheels, sufficient to overcome the resistance of the lumber to the action of the saw in the cut, and this forcing apart of the wheels by the strain on the mill exerts a strain on the saw which is greatest on the toothed edge, because the remainder of the saw has been given more tension or expansion. In the process of sawing there is added to the above longitudinal strain on the saw, a lateral strain, due to the feed of the timber to the saw, and this feed must be directly proportioned to the excess of strain in the toothed edge over the remainder of saw, or the saw will not cut to a line. The sawyer must so direct the feed that this lateral strain of the saw in the cut shall not exceed the longitudinal strain of the cutting edge, or in other words, must vary the feed according to the size and clearness of the stock being sawed. It will also be apparent that the prevention of cracks, or the preservation of the life of the saw, must depend very largely upon the avoidance of all unnecessary strains upon the saw, whether longitudinal or lateral.

A band saw running on a mechanically straight line is much more efficient than one running on an irresponsible wave line. When the saw is properly tensioned, if you apply a straight edge to the back of saw, longitudinally, the saw shows convex, and if applied to side of saw it will show flat all along the blade. Place the saw upon the mill under the strain and it becomes a straight belt of steel, with the toothed edge so tight that it is supposed to cut a line. It doesn't always do it, however, as many a lumber pile testifies.

The exercise of care each day and the close examination of the saw as it comes off the mill marks the successful filer. The special work each time may be little, but it is the "stitch in time." It means an ultimate saving of time and of saws. Look for the tight spots. Make sure the tooth side is not convex. So doing, the work of fitting is reduced to a minimum, unless you strike iron or stone, or have a saw pulled off the wheels.

Band saws are bound to stretch on the toothed edge, and when so stretched are likely to crack. In testing the edges lay the saw flat on leveling bench, test the back with straight edge, and if a hollow spot is found, use the round face hammer, or the rolls, along the section thus requiring expansion, having regard to not taking out the tension, which you will do if you work along the edge without going into the body of the saw. If you use a hammer, use it so as to avoid any marks or indentations. Have the back of the saw touch the straight edge throughout, or better still, have the back full or convex. Thus the tooth edge, being the shortest edge, when subjected to strain is drawn tight or straight and passes through the cut on a line, whereas, if longer than the back edge, it would tend to wave or kink, thus causing a constant vibration of the blade.



EXPANDING THE BACK EDGE.

In applying the straight edge, mark only the highest spots, being careful to mark directly on these lumps. A straight edge, in testing tension, should not be rocked or leaned, but applied as nearly square as possible. A north or east light is best, and light should strike saw from but one direction.

The tension in a circular saw is like the tire on a wagon, it holds and steadies the inner portions. It is somewhat similar in the case of a band saw. The reason why the back edge may be slightly longer than the front is that the strain of the weights on mill, and the friction arising from the saw in cut, which is 50% or more greater on the front edge than on the back, causes heat which expands the blade to a certain degree, and more on front than back. If this difference in length of the two edges is made equal to the expansion of the saw in operation, then the saw will cut to a line and with no tendency to crack. But if you get the back too long, so that the expansion of the toothed edge cannot compensate for this, then the front will crack, as it cannot stretch enough. If you could examine the saw in operation at full speed, you would find little or no tension apparent, because the heat draws the tension and makes an even strain on the full blade. Both filer and sawyer have to do with the preservation of tension. The sawyer should see that the guide is neither too tight nor too loose after each changing. The guide must be in perfect line with the carriage or feed roller. Sometimes a chip falls between the guide and the saw and wedges in so tightly that it cannot be removed until saw is brought to a standstill. Before this can be done the saw will be in bad condition. The tension is out and it may be cracked or spoiled entirely. — From catalogue of Baldwin, Tuthill & Bolton, Grand Rapids, Mich.

## FORESTRY IN NORTH AMERICA.

A RECENT issue of the Journal of the Canadian Bankers' Association contains a carefully compiled article by Mr. John Bertram entitled "The Forestry Question in North America." At the outset reference is made to the evil consequences of deforesting, and to the growing appreciation in late years of the necessity of perpetuating our forest wealth. The steps taken by the United States in this direction are outlined. As showing the rapidity with which the State of Michigan was denuded of its forests of white pine, it is stated that the cut of timber increased from 788,318,000 feet in 1878 to 1,413,631,089 feet in 1890, and decreased to 513,585,289 feet in 1896, of which 265,234,314 was from Canadian logs. In the Dominion of Canada the forestry movement is said to be steadily growing, and the Ontario government is commended for its system of fire ranging. Figures are given showing the rate of growth of young pine. Germany has a system of forestry, and the net revenue from the crown forests, after paying all expenses (which were over 50 per cent. of the net product) was, in 1893, $1.33 per acre. The concluding paragraph reads as follows:

"Canadians are still unable to grasp the significance of their heritage. They have, north of the height of land in Ontario and Quebec, a still unbroken wilderness covered mainly with spruce fit for the saw and pulp mill. As the world's supply of sawn lumber and pulp wood decreases, the shores of the Hudson Bay and Labrador will resound with the hum of machinery, and the world's supply of spruce timber will be sent forth from that northern country; and as spruce reproduces itself quickly, it will, with good judgment and the institution of a proper forestry policy, forever remain a mine of wealth to the country."

One of the busiest mills along the river last season was that of Smalleys & Woodworth, of Bay City, Mich. The band saw was started on day work February 24, and ran uninterruptedly until December 1, while night work was begun March 20 and kept up until the close of the season. Steady employment was furnished to 75 men. The total cut was 22,500,000 feet.

## IMPORTS AND EXPORTS OF FOREST PRODUCTS.

ACCORDING to the trade and navigation returns of the Dominion for the year ended 30th June, 1897, there were imported into Canada during that period forest products to the value of $2,032,554. This was made up as follows: Pitch pine lumber, $162,906; timber, squared or sided, $357,132; timber, hewn or sawed, and used for spars and in building wharves, $11,548; sawed boards, planks, deals, etc., undressed or dressed on one side only, $331,937; cherry, chestnut, gunwood, hickory and whitewood, $156,833; oak, $329,540; mahogany, $15,566; ship timber and ship planking, $1,139; walnut, $44,550; Spanish cedar, $15,596; white ash, $2,914; African teak, black heart ebony, red cedar, etc., $4,614; redwood, $1,229; rosewood, $895; amaranth, $69; box wood, $3; spruce clapboards, $923; pine clapboards, $252; lath, $7,461; pickets and palings, $252; logs and round unmanufactured timber, not elsewhere provided for, $189,577; fence posts and railroad ties, $91,409; ivory nuts, $9,458; hubs for wheels, posts, wagon blocks, rough or hewn, $4,309; hickory spokes, $60,366; hickory sawn to shape for spokes of wheels, $7,814; felloes of hickory wood, rough sawn to shape only and not planed, $29,600; hickory billets, $10; handle, heading, stave and shingle bolts, $1,721; oak and hemlock bark, etc., $67,390; corkwood, $12,106; shingles, $39,910; staves, $25,245; sawdust, $1,619; wood for fuel, $28,406; wood of the persimmon and dog wood trees, $495; wood manufactured, $5,971.

For the same period the exports of forest products from Canada reached in value $31,432,294, of which lumber represented a value of $23,871,010, square timber $2,394,113, shooks $80,636, poles $61,232, and logs $2,126,102, the balance being made up of miscellaneous articles. The value of the different classes was as follows: Pine deals, $3,313,357; spruce and other deals, $7,094,485; deal ends, $637,103; planks and boards, $10,832,185; battens, $24,594; laths, $471,341; palings, $8,403; pickets, $35,532; joists, $23,531; scantling, $414,443; standard staves, $94,906; other staves and headings, $604,525; other lumber not elsewhere specified, $317,415; square timber, white pine, $1,352,669; red pine, $52,439; oak, $540,288; elm, $170,689; birch, $194,080; ash, $41,991; maple, $3,280; all other square timber, $38,677; pine logs, $1,832,352; spruce, $107,073; elm, $77,978; hemlock, $13,790; oak, $4,066; cedar logs for shingle bolts, $4,280; all other logs, $90,843; shingles, $1,201,562; posts, $54,537; shingle bolts, $623; sleepers and railroad ties, $229,780; stave bolts, $38,634; box shooks, $56,435; other shooks, $24,201; telegraph poles, $40,038; hop and hoop poles, $4,568; other poles, $16,626; match blocks, $37,584; piling, $72,850; masts and spars, $2,926; basswood lumber, $41,656; hickory lumber, $1,718; firewood, $173,921; bark for tanning, $112,154; knees and futtocks, $8,972; pulpwood, $711,152; ashes, $101,757; other articles of the forest, $104,105.

The following figures show the distribution of some of the chief articles of export: Pine deals—Great Britain, value $3,309,450; Belgium, $1,944; United States, $881; France, $597; Brazil, $485. Spruce and other deals—Great Britain, $6,513,224; United States, $315,746; France, $117,482; Spain, $45,810; Newfoundland, $3,735; Argentine Republic, $32,479; Brazil, $30,142; Australia, $11,050; British Africa, $7,457; Sweden and Norway, $6,190; Holland, $5,750; Portugal, $4,180; Germany, $726; Belgium, $429; British Guiana, $85. Planks and boards—United States, $8,612,283; Great Britain, $961,357; Argentine Republic, $399,709; Australia, $164,163; British West Indies, $107,801; Danish West Indies, $7,054; South West Indies, $92,982; China, $96,628; Chili, $56,054; British Africa, $42,054; Peru, $31,458; Japan, $41,551; Spanish possessions in Africa, $30,291; Uruguay, $23,857; Portuguese possessions in Africa, $28,594; France, $27,758; Belgium, $96,628; St. Piere, $17,670; Gibraltar, $17,468; Madeira, $13,691; Brazil, $12,105; British Guina, $11,265; Newfoundland, $10,382; United States of Colombia, $1,839; Spain, $526; Hong Kong, $1,441; Hayti, $575; Germany, $334; Holland, $90; Mexico, $62. Deal ends were exported to Great Britain to the value of $628,110; laths to the United States to the value of $465,658; shingles to the United States, $1,184,279; box shooks to Great Britain, $35,715, and to the United States, $16,412; pulp wood to the United States, $677,221, and to Great Britain, $33,931.

SHIPPING TIMBER AT BURRARD INLET, B. C.

## BOX SHOOKS FOR ITALY.

UNITED States consuls in the fruit districts of the Mediterranean have called attention to the market there for American box shooks for making lemon and orange boxes. There is no opening there for the boxes themselves for obvious reasons, but for the shooks, properly made and packed, there should be a large field, says the Lumber Trades Journal.

The fruit packers and exporters make their own boxes at a cost, it is said, of about 12 cents for whole and 7 cents for half boxes. The shooks are now brought mostly from Austria and Calabria. It seems that the requirements are for a stiff, strong end and sides, and a flexible, somewhat pliable top and bottom. This could be secured probably by furnishing a sawn piece for the former and a knife-cut veneer for the latter. Such shooks as have been brought from this country heretofore have not been altogether satisfactory, owing to their not filling the above requirements, besides not being of tough enough material. As they have mostly come from New England they were probably of soft pine or spruce. Our Southern box woods ought to be an ideal material.

They should be packed in packages of ten boxes each. The standard dimensions are as follows: 160 oranges—26.77 inches long, 14.37 inches wide and 11.02 deep; 200 oranges—27.16 inches long, 13.78 wide, and 10.24 deep; 300 small oranges—26.77 inches long, 14.17 wide and 11.02 deep.

Any concern wishing to cultivate this trade would do well to prepare a few sample packages made up according to the preceding sizes and requirements and forward them for inspection and examination. Our consul at Catania names two dealers there as among the most prominent, Guiseppe Fazio and G. Scalia Chines. These men would without doubt be glad to receive correspondence and samples and would be able to furnish other information.

## EXCELSIOR.

EXCELSIOR was first made in the United States thirty-five or forty years ago, according to Wood and Iron. The present output amounts to thousands of tons annually, and its use is constantly increasing. The usual commercial package of excelsior is a bale weighing 250 pounds. At wholesale it sells at $16 to $40 a ton. Excelsior is extensively used for packing purposes, in the manufacture of bedding, and in various other upholstery uses. It is also largely used for filtering purposes, and has various other uses. Excelsior is now extensively manufactured in Germany and France, where it is called wood wool. The wood used in the manufacture in those countries is brought from Norway and Sweden.

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## RETAIN THE HOME MARKET.

WHAT can be accomplished by united effort was shown by the success achieved by the lumbermen of Ontario in securing the prohibition of the export of saw-logs. This was a question affecting only the western portion of Ontario, and the interest therein was confined to a small percentage of the lumbermen of the Dominion, except in so far as the legislation might incur retaliation the same as an export duty, and thus increase the import duty on lumber. A matter having a wider interest is that of an import duty on lumber coming into Canada. This directly affects the whole Dominion, but British Columbia, Manitoba and Ontario in particular, as these provinces are made the dumping ground for low grade American stock, which is sold below the actual cost of manufacture.

The lumbermen of the Dominion should unite to secure the passage by the Dominion government at the present session of an act imposing an import duty on United States lumber. While the present tariff arrangements are in vogue, it would seem impossible to advance one sound argument against such a duty. Indeed, there is every reason to believe that such a measure will shortly be introduced in parliament, and that it will receive the support of both political parties.

In replying to the speech from the throne, Mr. George Bertram, M.P., of Toronto, alluded to the matter in such a way as to raise a strong hope in the breasts of lumbermen. Dwelling on the necessity of making some changes in the tariff to meet new conditions that had arisen, he said:

"Take, for instance, the duty on lumber. We know that the tariff was revised last session, but American lumber is admitted to this country still as it was before, free of duty, while Canadian lumber which was formerly admitted into the United States free of duty, is now dutiable. In the discussion that went on it was impossible to regard the log and the lumber duties otherwise than as interdependent and affecting one another, and it is most reasonable that the legislation of the United States on this subject of the lumber duties should be regarded in deciding upon the legislation upon that subject for Canada. This question has been before the public for a considerable number of years. At present, while American lumber comes free into Canada, there is a duty of $2 per thousand on lumber going into the United States. Thus a new condition has arisen, and, while I do not say that a duty should be imposed upon American lumber coming into this country, I do say that, new conditions having arisen, the government will be bound seriously to consider the question in the light of those new conditions and decide the problems that are thus raised so as to promote the best interests of the country at large."

From this expression of sentiment the belief might fairly be extracted that the government are alive to the necessity of taking action. It behooves those interested, however, to bring all possible pressure to bear upon the members of parliament to secure the desired end; no opportunity should be lost of making the situation thoroughly understood.

At a meeting of Ontario lumbermen held in Toronto last fall, a resolution was passed favoring an import duty. The British Columbia manufacturers have also fallen into line, and are working vigorously to secure the co-operation of lumbermen throughout the Dominion. At the annual meeting of the Western Retail Lumbermen's Association held at Winnipeg last month, reference was made to the quantity of cull lumber imported from the United States, much of which was said to be simply rubbish, but which found sale with the farmers owing to its cheapness. In each of these provinces the local industries are suffering from the unfair competition; they are shut out of the United States market, and must compete with foreign manufacturers for the local trade of their own vicinity.

There can be but one result of the present conditions, namely, the removal of Canadian mills to the United States, where they will be in a position to supply both the United States and Canadian trade. Already one British Columbia manufacturer has taken this step, and others will be compelled to take similar action unless given some protection. This is certainly not in the interests of the commerce of the couutry, and should not be permitted by the government. It can only result in depopulation and the enriching of the republic to the south by some of our best and most desirable residents—business men whose establishments afford employment for a large number of workmen, and which, in many instances, were the nucleus of towns and villages in which they are located. With the prospect of a revival of commercial prosperity, by all means let this injustice to our lumber manufacturers be removed.

## ONTARIO LUMBERMEN'S ASSOCIATION.

AT the session of the Ontario legislature which recently adjourned, by far the most important question discussed was the timber policy of the province. The measure finally introduced in the House was in accord with the views of the opposition, and the accusation was made that the government had stolen the policy of their opponents. The Premier, in response, pointed out that the credit of formulating the policy was due to the lumbermen themselves, who had met together and framed a line of action, which was submitted to the government. Here is a practical illustration of the benefits to be derived by organization. It shows the actual necessity of having a live association of lumbermen to battle with questions affecting in a general way the lumber trade, similar to the one for which legislation has just been passed. That there exists a strong feeling in favor of reviving the existing association in Ontario into greater activity or forming a new one is quite evident. A Georgian Bay manufacturer, in a letter to THE LUMBERMAN, says: "We think the formation of an active lumber association would promote the interests of both pine and hardwood lumber manufacturers, and also improve prices." This is the view held by many others, but there appears to be a disinclination to take the initiatory steps. Those in favor of the formation of an association are asked to state their views through the columns of this journal, and make suggestions for the successful working of the same. Let there be a hearty response to this invitation.

Since the above was written we learn that the annual meeting of the Lumbermen's Association of Ontario is announced to take place in Toronto, in accordance with the constitution, on February 28th. Circumstances being unfavorable to the holding of the meeting on that date, it is proposed to meet pro forma and adjourn until Tuesday, the 22nd of March, at the same time and place. At this meeting it is hoped to infuse new life into the Association, and to endeavor to make it of greater benefit to its members, and to the lumber trade in general. Further announcements will probably be made after the formal meeting on the 28th of February. It is probable that the question of forming a hardwood section will be considered. The pine and hardwood manufacturers represent two distinct industries, and it would seem almost necessary that two separate branches be organized, one to represent the pine manufacturers and the other the hardwood trade. All lumbermen who are desirous of seeing such an association organized, and willing to identify themselves with it, should be present on the 22nd of March.

## WEST INDIA TRADE.

MESSRS. J. A. Chipman & Co., commission merchants, of Halifax, N. S., have done much towards the extension of Canadian trade with the West Indies. To them is due the credit of a large portion of the business which our manufacturers have secured, and while the United States still holds the bulk of the trade, it is believed that

the efforts which are now being made will soon result in a preference being given to Canadian manufacturers. Messrs. Chipman & Company announce that they are now establishing in every part of the West Indies touched by our Canadian steamers, brokerage or commission agencies, to work up an exchange trade in merchandise between Canada and those countries. These agencies will impart information regarding the products of Canada, give cost at point of manufacture, rail and ocean rates of freight, address of manufacturers, etc. Wherever possible samples will also be exhibited, and arrangements made with the persons in charge to handle goods on commission. We have received a copy of the agreement which Messrs. Chipman & Company are entering into with the representatives of these agencies, one clause of which provides that they shall promote the trade as far as possible by seeking orders from importers, such orders to be collated and forwarded, by cable or otherwise, either direct to manufacturers or to Messrs. Chipman & Company. The promoters of this trade are desirous of securing the co-operation of Canadian manufacturers. Those who are catering for foreign trade are asked to communicate with the above mentioned firm, who will gladly furnish such information as is required.

Already Canada is doing a considerable trade in lumber with the West Indies, but this is capable of expansion, while furniture, woodenware, machinery, etc., may find a market there. Nevertheless, the business can only be secured by persistent effort on the part of our manufacturers, as the business with United States houses has become established, and the regular steamship line from New York affords reliable transit.

## EDITORIAL NOTES.

It is the evident intention of the Dominion government that Canada shall be properly represented at the Paris Exposition. According to reports from Ottawa, the sum of $50,000 will be placed in the estimates for the purpose of making a display of Canadian products, and out of a total of 800,000 square feet allotted to Great Britain and the colonies, Canada has applied for 60,000 square feet. It is the duty of our manufacturers to assist the government as far as possible in preparing a creditable exhibit. In the matter of a forestry exhibit, it is none too early to commence preparations. The results obtained will certainly be more satisfactory if ample time is allowed for preparation.

Should the present agitation result in securing the building of railways in various parts of the Dominion, it will prove of great benefit in developing the lumber industry. It is rumored that the construction of a railway from Winnipeg to a Canadian port on Lake Superior is about to be undertaken. This, for instance, will provide a competing line with the C.P.R., which has heretofore held a monopoly of the trade of this territory, and in all probability secure such a reduction in rates as would permit our Georgian Bay manufacturers to supply the lumber demand of the Northwest, which under present circumstances goes largely into the hands of the Minnesota manufacturers. In developing the timber resources of Ontario the proposed James Bay railway will be of inestimable value. There are thousands of miles of pine and spruce timber which would be made easily accessible to Toronto by the building of this road. One estimate places the amount at seventy-five billion feet, which is perhaps a little beyond the mark. Toronto, in turn, would be benefitted by the development of these timber resources and the increased demand for supplies which would result. Two of the largest mills in the province are located at Whitney and Cache Bay, the owners of which are said to be strong advocates of direct rail connection with Toronto, where supplies can be purchased on favorable terms, and where another outlet would be afforded for their lumber.

Many lumbermen in Western Ontario will look back upon the year 1897 as one which marked the beginning of a new era of business. Particulars furnished for our annual review contain the information that several mills made their first cut for the British market. The general experience is that the business was much more satisfactory than the United States trade. The stock was sold and inspected at the mill, and the possibility of any misunderstanding as to grading thus removed. Usually the entire production for this market is sold to one dealer, which is a further advantage. The larger the share of the British trade that can be secured by Canadians, the less dependent our lumbermen will be upon our southern neighbors.

## POWER AND TRANSMISSION KINKS.

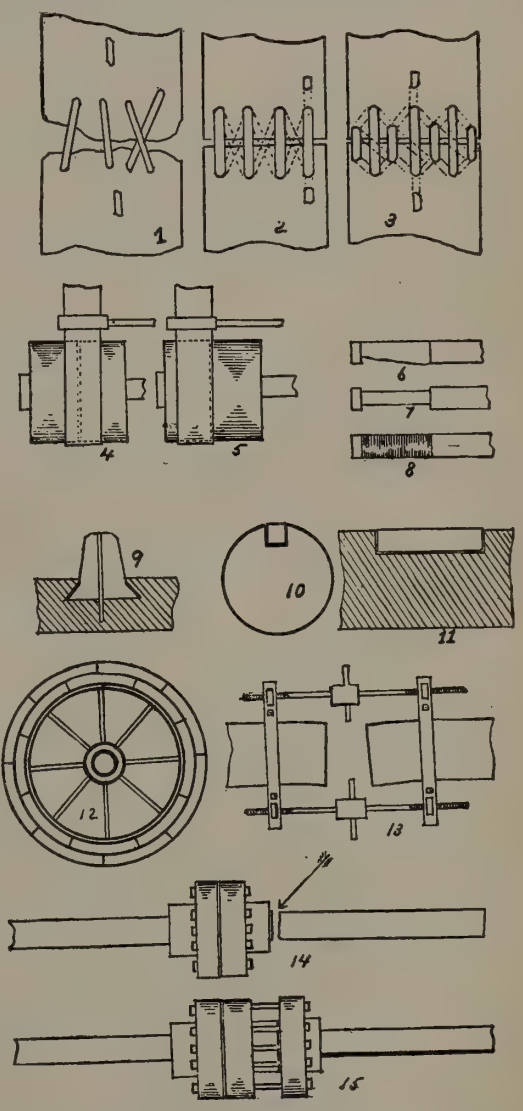
In order to get the most out of any power transmission, the belting and all mechanical parts must be run to best advantage. If belted with a loosely laced belt like that shown in Fig. 1, the system will not run well, as the splice, being open, will slip upon the pulleys. The samples given in Figs. 2 and 3 show the plan of procedure which may be followed by the crosses on the back which are represented by the dotted lines. By thus making good, substantial unions that draw the butts of the belt together evenly and securely, less trouble will be had regarding the driving mechanism.

Do not run the belt too tight, as it will strain the bearings, cause friction, and consequently there will be loss of power. If too loose it will be likely to slip on the pulleys and cause loss of time as well as uneven work. It should be slack enough to be readily transferred from the tight to the loose pulley without excessive strain on the shipper. I have often found a machine doing poor work owing to the belt shipper being set as in Fig. 4, in which the belt runs only partly on the tight pulley. Set it to run clear over on the pulley as in Fig. 5.

When a shaft it worn down as shown in Fig. 6, take it to the shop and turn it down like Fig. 7, then wind with steel wire as represented in Fig. 8, and a fairly good job will result.

When a cog breaks off of a gear, shape a new cog and dovetail it in, in the manner shown in Fig. 9, and insert a steel pin to prevent the cog from working sidewise. When a bearing throws oil in a place where it is desired that no drippings shall fall, cut a key-way in the centre of the bearing, about half the width of the box, and put in a felt pad as shown in Figs. 10 and 11; the pad absorbs the oily matter.

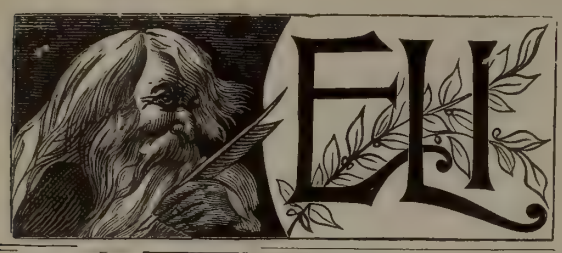
A lag pulley with wood is shown in Fig. 12, by bolting on sections of pieces cut to correct size to form a smooth surfacing. On the surface put a cement composed of two pounds of black pitch, two pounds glue, one pound linseed oil. I have often travelled far to some mill or shop in response to a call from the proprietor, who has written to the makers of his new machines to the effect that the same do not work right, and upon arrival at the factory have discovered the cause, not in the machines themselves, but through some defect of setting up or starting. The pulleys, for instance, are sometimes the whole source of the trouble through being too small. The builders of the machines cannot tell just what size pulley to furnish always, consequently the selection of the driving pulley often falls to someone at the mill. High speed is the aim nowadays, and yet pulleys of but six or seven inches too small in diameter are frequently used to drive machines. This has many bad effects on both machine and belt. If the pulleys were larger in diameter, the results would be



much better. The writer has often proved this to manufacturers by lagging up the driving pulleys on the shaft in the manner shown.

A good belt tightener for large belts is shown in Fig. 13, consisting of the two double end bolts at either side, arranged in the ordinary way, but threaded right and left, so that when turning the centre pivots, both ends of the belt are drawn toward each other simultaneously.

A shaft recently broke short off near a coupling, as shown in sample 14. We desired to run the mill until Saturday night, and as the shaft would not bear shortening, we put another coupling on the broken end, keyed it firmly, and inserted bolts clear through from the former couplings, as shown in Fig. 15, and the mill was kept running.—Power and Transmission.



In earlier days many a snug little fortune was made by speculation in timber limits, but of late years few turn-overs have netted more than a fair interest on the investment. Andrew McCormack, of Ottawa, however, has just closed a deal by which he realizes more than five times the original investment. Here are the particulars: About ten years ago the Rathbun Company purchased the Little Hiboux timber berth, near Desert, for the sum of $4,000. Without cutting any timber from the limit, this company sold it in 1893 to Mr. McCormack, for $11,000. In the winter of 1895-6 Mr. McCormack took therefrom 3,000 pieces of square and waney timber, valued at $25,000, and a few days ago sold the limit to Maclaren & McLaurin, of East Templeman, for $38,000. This sum added to the $25,000 gives a total of $63,000 realized from the property, which, after deducting a fair interest on the original investment, represents a profit of over 500 per cent.—certainly not a bad speculation.

* * *

A visitor to Toronto recently was Mr. Angus B. McInnes, superintendent for Booth & Gordon, of Sudbury, Ont. Mr. McInnes tells me that the firm are removing their mill from Sudbury to Raeside, where it is being fitted up with some improved machinery, the intention being to manufacture almost exclusively for the British market. Their specialty will be red pine, which they believe has a future more promising than the past. Their limits are situated adjacent to Raeside, and contain sufficient timber for from five to ten year's operations. Referring to the work in the woods, Mr. McInnes said there was a superabundance of snow, which made it difficult to get good roads for hauling and also interfered with cutting. Asked if the cutting was not over for the season, he replied that it was being carried on later than usual. One firm in the vicinity that was cutting logs for export to Michigan had put in some extra camps on the first of February, a very unusual occurrence, and one which seemed somewhat strange in view of the unfavorable logging conditions. It is possible that an awakening to the fact that the legislation passed by the Ontario government is certain to be carried into effect is responsible for the decision of this firm to increase the season's production. There are some who still have a faint hope that the Dominion government will disallow the bill.

* * *

Birch lumber was the subject of a short conversation with a lumber dealer the other day. His remarks, in part, I give to lumbermen, who may find therein something of profit. "Throughout the country," he said, "I find a scarcity of inch birch, and cannot obtain the necessary stock to fill orders. I will take 250,000 feet of inch and inch and a quarter for spring shipment, provided the stock is right. Manufacturers make a great mistake in cutting birch; they do not appear to study the requirements of the market. They will find it to their advantage to cut a greater quantity of thin lumber, averaging from one inch to one and one-half inch, and as much of it as possible over ten inches in width. Many manufacturers slab the logs so narrow that the stock is not marketable; they have pursued this method year after year, because by doing so they may get an extra board out of the log. But there is any amount of narrow stock both in the United States and Canada, for which there is little demand. It should be borne in mind that according to New York inspection, firsts call for 66⅔ per cent. of stock to be eight inches and up in width. Another mistake made by mill men is in cutting too many thicknesses. Manufacturers getting out only a small quantity of stock should cut it all to the same thickness." The lesson to be learned from the above is that mill men should give greater attention to studying the requirements of the market. Lumber that was in demand five years ago may to-day be little asked for. The demand for specialties is as true of lumber as of any other commodity.

* * *

The following story is vouched for by Mr. C. H. May, until recently connected with the Chemainus Lumber and Manufacturing Company, of Chemainus, B. C.: Up at a little place on Queen Charlotte sound called Takush Harbor, an English syndicate decided to build a saw mill to get out yellow cedar, of which there is quite a large body in that vicinity. You know British Columbia is full of sons of English lords, sent out to make their way in the world, or "pensioned," as the case may be. The "pensioners" are in many cases wild boys in need of reformation, but there are also quite a number of able and industrious men among them, who honestly are endeavoring to carve out their own way. Of course they bring their customs and habits with them, and are amusing enough to Americans and native Canadians. Well, the syndicate decided to send out a young Englishman to assume the position of mill superintendent. The young man, of course, hadn't the remotest idea of the hardships he had to undergo, nor did he know a thing about the saw mill business. I happened to be on the steamer that took the mill crew and the superintendent up to the mill. The superintendent had a large quantity of baggage and a valet. The idea of a mill man having a valet naturally struck the mill crew as something exceedingly rich, and all sorts of remarks were made. In the afternoon of the first day the superintendent decided to take a nap on deck, and calling on his valet said, "Hi, there, me man; bring me a rug, aye say!" The valet brought the rug and the superintendent proceeded to enjoy his nap. Being near the smokestack, it was not long before soot began to fall, and in half an hour the sleeper's face was black. In the meanwhile the valet had secured a rug, and, seeking another portion of the deck, was soon wrapped in slumber. One particularly large speck of soot settled on the superintendent's nose, and awaking he sought to brush the same away. Of course this served only to spread the soot and his face was as black as a negro's. Noticing that his hands were black, he reached for a hand-bag, and taking therefrom a mirror saw what the trouble was. He then set up a yell for the valet, who came rushing to the spot in haste. The superintendent requested him to get some water, and while laying on his back the valet carefully bathed his face, amid the laughter of the mill hands, who had congregated near the spot. Well, when Takush Harbor was reached it was found that no quarters had been prepared for man and valet, and they were forced to take up their quarters in a hastily made hut. Of course the mill hands told the mill wrights about the superintendent, and when next morning the valet came down to the office to warm his master's shoes and stockings he was unmercifully guyed. The superintendent stood all sorts of jokes for one month (there was only one steamer a month), when he returned to England.

## CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

### CANADIAN TRADE AND THE DINGLEY BILL.

VANCOUVER, B. C., Feb. 11th, 1898.

To the Editor of the CANADA LUMBERMAN:

DEAR SIR: I notice that in the "News" column of your February number you say: "James McNair, of the Hastings Shingle Mfg. Co'y, Vancouver, B.C., has removed to Whatcom, Wash., having obtained possession of the Cooper mill in that city. Mr. McNair hopes to thus retain his extensive American trade." Now, this is putting it pretty nearly correct so far as it goes, but in case we may be misunderstood as to our Canadian trade with our present and would-be customers, you might add that, by having a shingle plant, we will be enabled to take care of our Canadian as well as our American trade; for, as there is NO duty on lumber or shingles coming into Canada, and we have a fine wall on the American side, where timber is cheaper, we can handle the Canadian trade splendidly for some time yet, no doubt, as our Parliamentary representatives in Canada are too slow for our American neighbors.

By being in Washington and manufacturing for both sides there, we can be right "in it." We must say, however, that Canada is doing a very wrong thing not to encourage those infant industries in British Columbia.

I enclose a clipping of what the Americans think of the Dingley Bill. It may be of some use to you if you are in favor of getting Canadian rights.

Yours very truly,

JAMES A. MCNAIR.

The clipping referred to by Mr. McNair is taken from the Whatcom, Wash., Reveille, and reads as follows:

THE DINGLEY BILL.

James McNair, a member of the Hastings Mill Shingle Co., of Vancouver, B. C., has an operating claim on the Cooper shingle mill at Goshen and has secured much valuable timber in that vicinity, and will run the mill at high pressure when he commences, which will be soon. Mr. McNair is a member of one of the best shingle firms on the Canadian side, a firm that had a trade in shingles established in the Eastern States. The Dingley bill duty of 30 cents per thousand shut them out from competition with American mills, and the result is that they come over on the American side and pay American workmen wages to be spent in supporting American homes and American tradesmen, and in paying American taxes to support American schools and courts and institutions. The Dingley bill is all right in that direction.

In a series of articles dealing with the immediate problems which concern the great powers of the world now appearing in the American Monthly Review of Reviews, Mr. W. T. Stead writes for the February number a paper on "British Problems and Politics for 1898." This is a candid piece of criticism, all the more interesting to the non-English reader because of its strictly British point of view.

"Eight Routes to the Klondyke" is the title of an up-to-date hand-book issued by the Colonist Printing and Publishing Company, of Winnipeg, giving the latest information about the various routes by which the famous Yukon gold fields may be reached. It contains full descriptions of the different routes, together with tables of distances, cost of outfits, a map of the routes, etc. Copies may be had from the publishers for 25 cents each.

## LUMBER DRYING BY THE "MOIST AIR" PROCESS.

The artificial drying of lumber is a subject which is attracting more attention now than ever from the woodworker. It is well, too, that it should, for it is the foundation really of successful work in cabinet making, house furnishing, etc.

Until within a comparatively short period it was considered necessary to allow all forest products to become seasoned by exposure to the atmosphere. This is an age, however, in which the workings of nature are altogether too slow for progressive manufacturers, and the woodworker has been forced to resort to artificial means to get his material in working condition within a reasonable time.

The art of drying lumber, shingles, staves and other forest products artificially has also undergone many changes in the past few years, as the result of experience gained by the dry-kiln manufacturer and the user as well, and, in consequence, lots of beautifully constructed theories have been ruthlessly demolished, as improvements in one system were superseded by greater ones in another. The direct heat, the hot blast, the dry air, the cold air process, and others, have all had their advocates and upholders.

The system of drying in a moist heat, as now perfected and employed only in the Standard kiln, is claimed by the manufacturers to have been found by practice under all possible conditions to meet every requirement in the broad field of drying.

This principle of drying is a progressive one; the first stage being preparatory, which consists of subjecting the material to the action of a body of evenly heated damp air, the exact temperature and degree of humidity being dependent upon the kind of material to be dried. The purpose of this treatment is to soften the surface and prevent case-hardening; to open the pores and start the drying from the center, outward. As the material is moved through the kiln the

Fig. 1.

temperature and comparative dryness of the air increases, and the drying is completed in the highest temperature, which is found at the discharging end of kiln.

While it is now claimed to be an established fact that all kinds of forest products are most successfully seasoned in a moist heat, it is equally true that the degree of heat and percentage of humidity must be varied to suit the particular kind to be dried, hence the importance of a system that is susceptible of perfect regulation.

The construction of the Standard kiln is such that the heated air may be charged to any degree of humidity desired before it is discharged from the kiln; in fact, it is within the province of the operator by simply manipulating the steam valve, cold air and moisture dampers, to get any combination of drying influences necessary to suit the product to be dried, and after once adjusted no further attention is required than to properly load kiln and keep up the steam supply.

The elements of drying are under perfect control. This makes it possible to get just the combination of drying influences best suited to dry the particular kind of stock to be dried, in the least time possible, consistent with thorough, uniform and perfect drying. This kiln is used with the

Fig. 2.

best of success in drying all varieties of hard and soft wood lumber, including cypress and oak; also shingles and tight and slack barrel cooperage stock—in fact, everything that comes under the category of forest products.

Another advantage claimed for the Standard kiln is, that it is not subjected in any way to fire from its own heat. The bottom of the kiln below the heating surface is always cool, and the kiln proper, as well as the material, being dried, is constantly kept damp by the automatic regulation and detention of the moisture, so it can be truthfuly said that the kiln is of itself absolutely fireproof.

The equipment furnished for this kiln is, too, of the highest possible grade. A special grade of pipe is used conclusively in the construction of the heating apparatus, and an indestructible, easy moving channel steel roller bearing car is furnished in place of the old-fashioned wood frame affairs. The kiln is built in all sizes, to suit requirements, either progressive or apartment types, and for endwise, crosswise or edge piling.

Attention is called to the engravings shown herewith. Fig. 1 shows an interior view of a four track endwise piling kiln from the discharging end, and gives a good idea of the arrangement of the heating apparatus.

Fig. 2 shows view of same kiln from receiving end, and illustrates the novel arrangement and

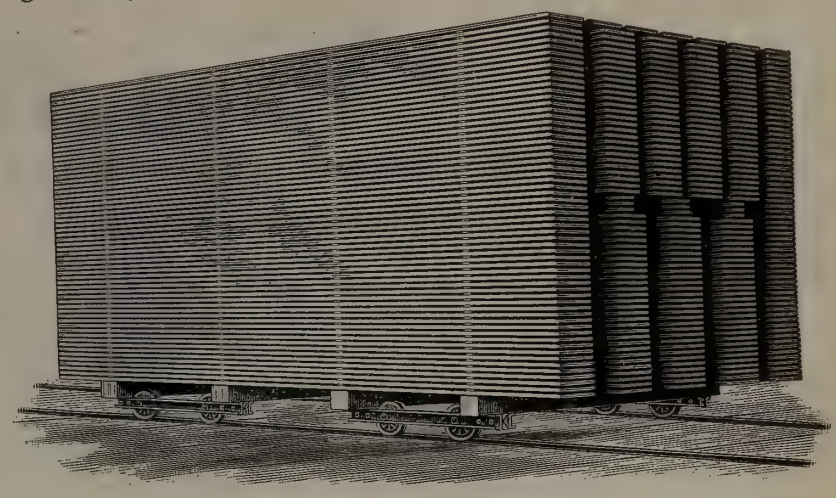


Fig. 3.

construction of the moist air flues, through which the moisture ladened air is carried off.

Fig. 3 illustrates a channel steel roller bearing car loaded with lumber, endwise.

In conclusion it might be stated that the Standard kiln has been before the public for eleven years; it is used in the United States, Dominion of Canada, and other countries, by many of the largest and most representative concerns.

A 125 page catalogue, which illustrates and describes very fully the Standard kiln, equipment and moist air system of drying, and which also contains many photographic views of plants erected and testimonial letters from users, will be sent to anyone interested on application to the Standard Dry Kiln Co., Indianapolis, Ind.

## NOVEL LOGGING RAILWAY.

Messrs. R. Richardson & Son, of Bedford, Nova Scotia, have recently constructed a somewhat novel railway for hauling logs to their mill, which they describe as follows:

The railroad is constructed of hardwood and spruce poles, about 6 inches diameter on an average and 20 to 25 feet long, and a few cross ties about 5 feet apart. The ends of the poles lap on a level, the butt end of pole lapping on top and towards the terminus. As the trolley is loaded when coming to the landing, the poles must be made to suit the way the load goes. The trolley is made of two pairs of wheels, cast hollow, or with a double flange; they are about 24 inches diameter and 9 inches face. There is a heavy bunk made on each axle, and these are connected by a tongue made in two pieces and lapped in the centre with a bolt through, and a piece of rope tied loosely around to prevent the tongue having too much play. There is also a swinging bunk on top of the heavy bunks on the axles, so as to allow the trolley to play easily on the curves under the load. We can bring, with two horses, over a rough piece of land on this track, about 1½ cords of hardwood, which means a good double team load on a good road. The track can be made on rough land. While to make a waggon road it would cost several hundred dollars per mile, we can build this road for less than one hundred dollars a mile.

# THE RETAILER AND Wood-Worker

## ANNUAL MEETING OF THE WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

THE Western Retail Lumbermen's Association, of Manitoba and the Northwest Territories, held its seventh annual convention in the city of Winnipeg on Wednesday, February 9th. The chair was occupied by the president, Mr. T. A. Cuddy, of Minnedosa. On account of a slight railway accident the vice-president, Mr. J. B. Mather, of Glenboro, was unable to reach the city in time to attend the meeting. There were present about 70 members, including the following honorary members of the Association: G. A. Graham, of Graham, Horne & Co., Fort William; D. C. Cameron, of the Rat Portage Lumber Co.; R. A. Mather, of the Keewatin Lumber Co.; D. Ross, of Whitemouth, Man.

In his opening address the president congratulated the members on the improvement in business during the past year, and the bright outlook for 1898. Reference was also made to some of the difficulties which they had been obliged to contend with during the year. The statement of the secretary showed that an increase of four in the membership had been made during the year, the total now being 164.

Mr. Black opened an informal discussion as to the value of the Association to its members. The opinion was almost unanimous that the Association had accomplished much good. It was pointed out, however, that the rules had in many instances been violated, to the detriment of the the Association. It was agreed that if the rules and by-laws were more rigidly carried out, the value of the Association would be greatly increased.

MR. J. B. MATHER,
President-elect Western Retail Lumbermen's Association.

The manufacturers were then called upon to address the meeting, each one declaring himself to be in entire sympathy with the Association. Reference was made to the quantity of lumber imported from the United States, nearly all of which was of very poor quality, and sold to farmers at a low price. The feeling appeared to be that the home industries should be given the preference, which was stated to be the only way to build up the country and advance the general prosperity of the community. It was shown that lumber was being sold throughout the province on a very small margin of profit, much smaller than is usually secured in other lines of business.

The election of officer was next proceeded with. Mr. J. B. Mather, of Glenboro, who last year served as vice-president, was elected president by acclamation. Mr. H. Byrnes, of Winnipeg, was chosen vice-president, also without a contest. Directors were elected as follows: D. E. Sprague, Winnipeg; R. H. O'Hara, Brandon; E. C. Jackson, Rapid City; D. McMillan, Morden; A. L. Campbell, Melita; G. Miller, Virden.

An interesting discussion followed on the existing lien law of Manitoba. It was decided that the new directors should interview the government upon the subject, and endeavor to secure the passage at the forthcoming session of parliament of a law which would be more satisfactory.

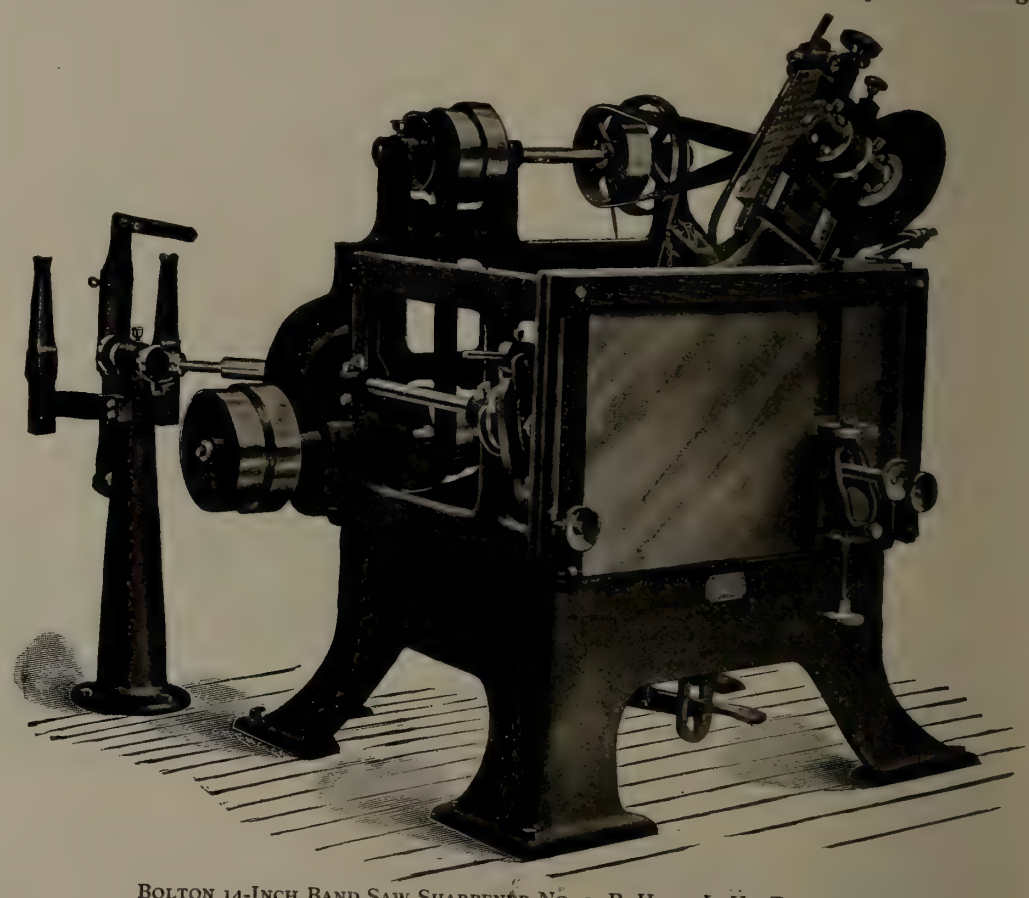
The question of fire insurance for retail lumbermen was discussed at some length. It was stated that the Northwestern Retail Lumbermen's Association, of Minneapolis, covering the states to the south of Manitoba, had established an insurance feature, by which they secured insurance at half the price formerly paid. A suggestion to unite with the Northwestern Association for insurance purposes was not received with favor. The feeling, however, seemed to be in favor of some system of insurance for lumbermen in connection with the Association. A resolution was passed instructing the Executive Committee to take immediate action to investigate the matter and to formulate some plan of fire insurance, the members to be notified of the decision arrived at by the Executive at as early a date as possible. The meeting then adjourned.

The Executive Committee held a brief session on the following day. Mr. John Dick, of Winnipeg, was re-elected secretary, and his salary increased to $1,000 per year, in order that he might devote his entire time to the affairs of the Association.

## BOLTON 14 INCH BAND SHARPENER.

THE attention of band saw operators is called to the Bolton sharpener, illustrated, for which the manufacturers claim many features of excellence in contruction and operation found in no other machines. The following are essential features:

1. Exceptional weight and strength, freedom from vibration, machine tool construction.
2. Boxes long and heavy, slides with large wearing surfaces hand scraped to bearings.



BOLTON 14-INCH BAND SAW SHARPENER NO. 1, R. H. OR L. H., FRONT VIEW.

3. Micrometer feed finger, with quick return and positive stop.
4. Inclination of emery wheel, anything from 0 to 45 degrees, 3 speeds for wheel, exhauster for dust.
5. Universal back pawl device, connected to machine with universal shaft.
6. Universal form for producing any desired shape of tooth.
7. Rotating form to prevent burning or case-hardening at point or in gullet.
8. Clamping wheel to prevent lifting of saws having teeth with extreme hook.
9. Two slides in the head, one to carry the emery wheel up and down, the other to take up the wear of the wheel.
10. Capacity for saws 4 to 14 inches wide.

For front and back views of the machine, together with detailed descriptions of the above features and numerous others, address the makers, Baldwin, Tuthill & Bolton, Grand Rapids, Mich., for a copy of their 200 page book on saw fitting machinery and the care of saws.

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., FEBRUARY 23, 1898 No. 6.

## CANADA LUMBERMAN

PUBLISHED BY

C. H. MORTIMER

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the "Canada Lumberman."*

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.

SAW MILL AND STAVE MACHINERY, WITH stock of logs, principally elm. THOS. ROBINSON, Newbury, Ont.

WANTED.

BUYERS FOR ELECTRIC AND STEAM cedar railway ties, poles, squares, posts and shingles. N. D. SEAMAN, Owen Sound.

DRY LUMBER WANTED.

HARD MAPLE AND BIRCH, 3½" OR 4". State quantity, quality, place and shipping station. MASSEY-HARRIS CO., Limited, Toronto, Ont.

TO MILL MEN.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in this department. Address, CANADA LUMBERMAN, Toronto.

WANTED.

BASSWOOD LUMBER, 1", 1½" AND 2" FIRSTS and seconds, for delivery during the winter and coming season of navigation. We are open to purchase narrow basswood and shorts 1 1/16" thick when straight-grained and white. Address, THE RATHBUN COMPANY, Deseronto, Ont.

FOR SALE.

AT MONKLAND STATION, C.P.R., 35 M FT. 4/4 and 4 M ft 12/4 dry hard maple. At Lancaster, on G.T.R., or boat, 4 M ft. 8/4 and 100 M ft. 4/4 dry brown ash; all log run, mill culls strictly out. Will sell cheap for cash. MCARTHUR & SON, South Lancaster, Ont.

## CURRENT TRADE CONDITIONS.

### ONTARIO.

The trade returns of the Dominion for the seven months ended January 31st last show a large increase both in imports and exports, than which no better proof of the improved commercial conditions of the country can be found. While lumber has been a small factor in recent exports, owing to navigation being closed, the early spring will no doubt witness a revival of shipping to European countries and a moderate trade with the United States. The eastern market is now short of grades of white pine suitable for box making, which is resulting in spruce being substituted in some instances. Throughout Ontario there is a large amount of prospective building. Retail dealers are already experiencing a demand for building material, and in turn are placing orders for such stock as is in light supply. Present indications justify the prediction that the year will be characterized by a large local consumption of timber for railway work, bridges, harbor improvements, etc. In another column is recorded a sale of over 1,000,000 feet for the new interprovincial bridge at Ottawa. The season is certainly opening favorably for local trade, while the outlook for the export business is not particularly gloomy. As the winter advances the scarcity of dry hardwoods becomes more pronounced. Soft elm leads in point of demand, but as no stocks of any account are available, trade is necessarily restricted. This lumber seems to be growing in favor, and must command a still higher price in the near future. Ash is also firm and frequently asked for.

### QUEBEC AND NEW BRUNSWICK.

Representatives of Quebec houses now in Great Britain are said to have succeeded in placing some contracts at figures which compare favorably with those obtained last year. While spruce generally is weaker, it has not affected the St. Lawrence production in the same measure as that of New Brunswick, and to some extent the stock is finding sale in the usual channels. Last week two vessels sailed from St. John with lumber, one for Barbadoes and the other for Buenos Ayres. About one million feet was also shipped to Great Britain per regular liners. At the present time there is no buying, and quotations cannot be given.

### UNITED STATES.

An advance in the price of corn, produced in immense quantities in the middle and western states, has further increased the prosperity of that section of country. Farmers are disposing of their holdings, and this is putting in circulation much money which will prove of great benefit to the lumber trade. The movement of lumber is gradually swelling, and dry stocks are being bought up quite freely. Slightly higher prices are ruling, although no substantial advance has as yet been made. The eastern market does not exhibit the same activity as the west. This, however, might be expected, as the improvement invariably commences with the farming community and extends to the manufacturing districts. The feeling throughout the east is very hopeful. Dealers report a number of inquiries for stock, particularly from the box factories and for railway construction. A noticeable feature is the increasing demand for spruce for box making, which has probably resulted from the higher prices asked for white pine and the scarcity of the same. Holders of stock are also firm in their demands, and show no anxiety to sell unless at the prices asked. Eastern dealers have been purchasing lightly for spring shipment, and the next few weeks is likely to develop some large contracts. New York, Albany and Philadelphia reports announce a strong demand for hardwoods. There is a vast amount of car building being done, and every prospect of a large requirement for the spring trade. A marking up of prices is therefore talked of.

### FOREIGN.

The consumption of wood goods continues steady in the British markets, and so far as this branch of the trade is concerned, no complaints are heard. The weather is conducive to outside work, and more than the average volume of building is in progress. The demand thus created is gradually reducing the heavy stocks which were held at some of the ports, particularly at London, and is also brightening the outlook for spring goods to arrive. Importers are buying a little more freely, but agents are still experiencing difficulty in placing any large contracts for ordinary lines of goods. On the east coast the most active buying is reported. There red pine and spruce are being sold where Baltic goods were formerly used, owing to the high price of the latter. It is understood that nearly 20,000 standards, principally of 2 and 2½ × 6 and 6½, have been placed at 6£ 15s c.i.f. to the east coast of England, and also in Holland, Belgium and Germany. While values are not weakening, no effort has been made to secure an advance, in the face of heavy stocks of spruce available for spring shipment. There is a firmer tone of the market reported from Australia.

## STOCKS AND PRICES.

### CANADA.

The R. Laidlaw Co., Toronto, are in the market for one and one-half inch hard maple.

The city of Winnipeg has accepted the tender of T. E. Robinson for the annual supply of lumber.

The city of Brockville, Ont., will shortly invite tenders for the annual supply of lumber required by the corporation.

The Gilmour Co. expect to start their Canoe Lake mill about May 1st. The cut of next season will probably reach 60,000,000 feet. They now have twelve camps at work on their limits.

A dispatch from St. Martins, N. B., dated February 14th, says: The past week an immense quantity of deals and piling has been hauled to the wharves here, ready for shipment early in the spring. It is estimated that the cut this winter will amount to about eight million feet.

Mr. A. F. Bury Austin, of Montreal, has secured the contract to supply all the dimension timber, of white pine and hemlock, for both the understructure and bridge flooring of the new interprovincial

bridge that is now being built at Ottawa, to cross the Ottawa river at Nepean's Point. The material must be delivered by the 15th of March next. The contract will require over 1,000,000 feet.

The city of Hamilton, Ont., have awarded the contract for the annual supply of lumber to W. J. McAllister, at $12.63 per thousand.

FOREIGN.

A noticeable feature of the New York market is the shortage in both white and North Carolina pine box lumber.

The Erie railway has let contracts for the building of new docks at Buffalo, for which 1,700,000 feet of timber will be required.

At Buffalo there is a fair enquiry for box lumber, culls and shingles, but the higher grades of pine find very little sale. Although prices have not advanced, there is said to be a firmer tendency.

An advance of 50 cents has been made in the Minneapolis market on dimension and No. 2 and No. 3 boards. On March 1st it is expected that a further advance will be announced. The demand for shingles is better than at the same time last year.

At Tonawanda a little more activity is reported in cutting up stock and mouldings and better. Barn boards are moving readily. Box lumber is in fair demand, and promiscuous widths are growing scarce, so that before navigation opens there is likely to be a still further stiffening in values.

Concerning the Buffalo hardwood market, the Northwestern Lumberman says: There is considerable effort on the part of hardwood dealers to get in a good stock before the season opens, especially as so many of the best selling woods are not plenty, and there is a general expectation of higher prices before long. Some dealers report that they are selling very little outside of oak, especially since cypress became so dull and elm ran short.

Fine common and the better grades of shelving are in short supply at Albany. The list of stock on hand in that market gives 350,000 feet of dressing, of which only a small proportion is No. 1 grade. There is about the same quantity of box strips, which are in fair demand, particularly narrow box. Spruce is scarce, especially 1¼ x 9 in., the price of which has advanced nearly three dollars per thousand since October last. In shingles, pickets and lath there is little doing.

The following figures show the value of wood and manufactures thereof exported from Canada to the United States for the last four months of the years 1896 and 1897:

| | 1896. | 1897. |
|---|---|---|
| September | $1,961,899 | $1,010,208 |
| October | 1,639,707 | 1,053,525 |
| November | 1,600,504 | 969,434 |
| December | 952,893 | 770,438 |
| Total | $6,155,003 | $3,803,605 |

It must be remembered, however, that very large stocks were shipped to the United States during the spring of 1897, in order to escape the duty imposed by the Dingley Bill. This accounts in a large measure for the variation in the figures given above.

Churchill & Sims, London, Eng., say of the London market: Pine deals have been sold freely in London during January without much further weakening of the market, but at prices which ought to have been better from the shipper's point of view. There is no great reason why they should be even one point down here, as they never fully shared in the enhanced value of foreign deals during 1897. Spruce deals have been in capital demand throughout the month, but have been kept at almost the lowest level of the previous month by the weight of the stock to be disposed of. Oak, birch, elm, ash and white pine timber have been uniformly neglected, and the month ends with even lower current rates for them than in December.

Referring to the results of a public sale held by Churchill & Sims, London, Eng., the Timber Trades Journal says: The Oregon pine planks went from 11d to 1s 2d per cubic foot, at which price we should imagine shippers would not be anxious to repeat consignments unless they can get some assistance in reduced freights. This was, however, only a balance of a cargo, the remainder of it being sold on contract, and it is to be hoped shippers made their money out of that portion. The St. Thomas spruce of Price Brothers' shipment brought £8 10s and £9 for the 3 x 9 in., which, although reading low, is as good as could be expected considering the large quantity brought on the market last fall. The "Hazelmoor" Quebec pine 3rds went at £9, which again seems cheap, but the bulk of them were bought by one shrewd buyer who had probably had a look at them before, and knew exactly what he was buying.

## THE AUSTRALIAN MARKET.

Fraser & Co., of Melbourne, Aus., in their monthly report of 13th January, say:

But little alteration has been experienced in the general conditions of the market since the issue of our last report on the 16th ultimo. The holidays customary at the season of the year having meanwhile intervened, operations have, therefore, been protracted; but since business has been resumed in the new year, there have been indications shown to enter into dealings of more importance, though buyers have been desirous to secure some concessions upon existing rates, which importers in most instances have been unwilling to entertain, owing to the advanced costs of shipments lately to hand and shortly arriving, and to the fact of still further increased figures being named at export centers, both in the f.o b. and freight quotations for nearly every description of timber which is shipped to this market. In the course of the next few weeks, when business fixtures will likely be of a more general character in the whole colony, the necessity of purchasing, at least at current rates, will be more fully recognized, as there is but little prospect of present values declining, while, for reasons just stated, there is more probability of higher prices being manifested in the near future. The difficulty of obtaining tonnage for this port is now most pronounced, owing to the impossibility of procuring back loading from here for some time to come, and this factor alone must have the effect of enhancing timber values at no distant date, and so enable importers to obtain something over covering costs for their ventures, which, in many importations during the past year they were scarcely able to secure.

## WINNIPEG LUMBER PRICES.

Winnipeg dealers have as yet made no changes in lumber quotations, although it is expected that an advance will shortly be decided upon. The following are the retail prices:

Dimension and Timber—No. 1 2x4 to 2x12, 12, 14 and 16 ft., $18.50; 18 ft., $19.50; 20 ft., $20.50; 22 ft., $21.50; 24 feet, $22.50; 3 x 6 to 3 x 12, 4 x 4 to 4 x 12, 6 x 6 to 6 x 12 and 8 x 8, 12, 14 and 16 ft., $20; 18 ft., $21; 20 ft., $22; 22 ft., $23; 24 ft., $24; 8 x 10 to 12 x 12, 12, 14 and 16 ft., $22; 18ft., $23; 20 ft., $24; 22 ft., $25; 24 ft., $26; 2 x 4, 10 ft., $20.50; 2 x 6 to 2 x 12, 10 ft., $18. No. 2 dimension, $2 less than No. 1. Dimension, 26, 28 and 30 ft., $26. Timber, 26, 28 and 30 ft., $28. $1 per M. advance on each inch over 12 inches in depth and width. Tamarac dimension same price as pine. Spruce dimension at $2 per M. less than pine. Cull plank, all widths at $12 per M. B. C. fir dimension up to 32 feet at $30 per M., 32 to 40 feet, $33. 40 to 60 feet $36. $1 per M. extra for each 2 in. over 12 in. in width or depth.

Boards—1st common red pine, $25, 2nd common, $18, 3rd common, $16. No. 1 cull, $12, No. 2 cull, $8; spruce, $16.00. $1.00 per M. extra for stock boards. $2 per M. less for 10 ft. and under. No. 1 box boards, 14 in. and up, $30, No. 2 box boards, 14 in. and up, $26. Extra dressing $1.50 per M.

Siding, Flooring and Ceiling—2nd, 4, 5 and 6 inch, white pine $36; 3rd, 4, 5 and 6 inch white pine, $28; 1st and 2nd, 4, 5 and 6 inch red pine, $30; 3rd, 4, 5 and 6 inch red pine, $25; 4th, 4, 5 and 6 inch, red and white, $20; B. C. No. 1 fir, $32; B. C. No 2 fir, $29; B. C. No 3 fir, $26; B. C. spruce, $32; 4, 5 and 6 inch spruce, native, $20; 8 and 10 inch pine, $23; No. 1 cedar siding and ceiling, $36; No. 2 cedar siding and ceiling, $30; ½ inch cedar or fir siding and ceiling, $26. $1 per M. advance for dressing both sides.

Bevel Siding—No. 1 white pine, $26; No. 2 red and white, $23.

Shiplap—Pine, 6 inch, $18, 8 and 10 inch, $20; spruce, 8 and 10 inch, $19, 6 inch, $18; cull shiplap, $16.

Shingles—B. C. cedar, per M., No. 1, $2.50, No. 2 $2; B. C. cedar dimension shingles, $4; B. C. cedar dimension band sawed, $5; No. 1 pine, per M., $2.50, No. 2, $2, No. 3. $1.75.

Lath—Pine lath per M., $3.

Finishings—1¼, 1½ and 2 inch—White pine, 1st and 2nd clear, $65; 3rd clear, $55; selects, $45; shops, $36; red pine, clear, $40; selects, $32; B. C. cedar clear, $55; B. C. fir, clear and stepping, $45; $5 per M. advance on 2½ inch and thicker. One inch—White pine, 1st and 2nd clear, $60; 3rd clear, $48; selects, No. 1, $38; selects, No. 2 (extra 1st com.) $30; red pine, clear, $40; selects, $30; B. C. cedar, clear, $55.

Oak—Red and White—¼ sawed, $85; 1st and 2nd, $55 to $65; common, $40.

Mouldings and Base—Parting strips, 100 feet lineal, 60c.; lattice, ½ x 1½, 100 feet lineal, 75c., ½ x 1¾, 100 feet lineal, 85c.; window and door stop, 1⅛ inch lineal, $1.25; ditto, 2 inch lineal, $1.50; ¼ round and ⅞ cove, 75c.; 1½ round mould, $1.50; 2 round mould, $1.75; 2½ round mould, $2; 3 round mould, $2.25; 3½ round mould, $2.50; 4 round mould, $2.75; 4½ round mould, $3; 5 round mould, $3.25; 6 round mould, $4; 5 round window stool, 1¼, $4.50; 6 round window stool, 1½, $5.25; 4 round casings, $2.50; 5 round casings, $2.75; 6 round casings, $3.25; 8 round base, $4.50; 10 round base, $5.50; 12 round base, $7; hand rail, 2 x 4, $5; wainscot. cap, 2¼ inch, $2.35; 3 inch, $2.75; paper mould, 75c. Moulding made from 1¼ stock add 25 per cent.; 1½ add 50 per cent. Hardwood mouldings or mouldings to detail at special prices. All shop work at special net prices.

## SHIPPING MATTERS.

The steamer Simonside has been chartered to load deals at St. John, N.B., for Hull, Eng., at 42s 6d.

The ship Asia has been chartered to carry lumber from Boston to Buenos Ayres at $8 per thousand feet.

The steamer Barcelona is loading a cargo of pulp wood, spars and deals at Halifax, N.S., for Liverpool.

The following charters are reported: Ship Asia, Boston to Buenos Ayres, lumber, $8; Keewaydin, Jacksonville to Barbados, lumber, $5.50; bark Madeline, Yarmouth, N. S., to Buenos Ayres.

## FIRES.

Heffler & Webber's shingle and saw mill at Sackville, N.B., was burned recently. Loss $2,000; no insurance.

The saw mill of T. M. Reid at Cascades, Ont., was destroyed by fire last week, at a loss of $1,500. There was no insurance.

## BUSINESS NOTES.

Magruder & Noone have commenced in the lumber business at New York.

Poole & Hotchkiss, lumber dealers, Buffalo, N. Y., have dissolved partnership.

J. P. Williams & Co., of New York City, have been incorporated, with a capital stock of $25,000.

The Rome Planing Mill Co., at Rome, N. Y., has been incorporated, with a capital stock of $20,000.

The planing mill and lumber yards of Blythe & Co., at Monongahela, Pa., are reported to have been seized by the sheriff. The assets are placed at $50,000.

The Eastman Lumber Co., of Eastman, Que., has been dissolved L. D. Phelps retiring. The business will be conducted by the remaining partners under the old style.

The Moore Lumber Company, of Detroit, has filed notice that its property has been sold at private sale, the proceeds distributed among the stockholders, all claims paid, and the business wound up.—Lumberman's Review.

## THE DEMAND FOR FURNITURE WOODS.

From the standpoint of demand, the hardwood business is in a strong position. The Timberman says that the most activity of demand is found in the furniture, agricultural implement, wagon and car factories. Moulding shops are having very fair business, considering that this is an off season with them. Particularly is this the case with picture frame moulding manufacturers. As far as house mouldings are concerned, the demand is increasing, and promises soon to be large.

The furniture business is a particularly interesting one just at this time. Reports are uniformly to the effect that the factories are well supplied with orders, and that practically all of them are running at full capacity. The principal furniture points in the west, like Grand Rapids, Chicago and Rockford, are blessed with numerous buyers, who are placing orders in a liberal way, which is in marked contrast to the condition of things for several years past. They are from all parts of the country—east, south and west. Running at their normal capacity, as they are, the furniture factories demand a large amount of material. Unfortunately for them and fortunately for hardwood manufacturers and dealers, their stocks are, for the most part, low.

A gentleman familiar with this branch of the trade, when asked in regard to the class of lumber that was going in furniture, said that in his opinion the consumption and consequently the purchase of furniture lumber was, as far as quantity is concerned, in relative importance as follows: Birch, oak, soft maple, soft elm, mahogany and ash.

## LUMBER FREIGHT RATES.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, 5 cents per 100 lbs.; Arnprior to Montreal, 7 cents; Parry Sound to Montreal, 12 cents per 100 lbs.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to Boston, Portland and common points, local 15 cents; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 bs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum we ght 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2 20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

On the Canadian Pacific the rates on pine and soft woods may be illustrated as follows: Cache Bay, North Bay, Sturgeon Falls and Warren, to Toronto, 9c.; Algoma, Spragge, Massey, Spanish River and Whitefish to Toronto, 12c.; Ottawa to Toronto, 10c. From Ottawa, Hull, Aylmer and Duchesne Mills to station on the Lake Erie and Detroit River, Erie and Huron, and Michigan Cenrtal Railways, the rate is 14c. per 100 lbs. Regulations apply as to minimum size of car load of 30,000 lbs., and no advanced rate is charged for hardwoods.

Mr. Geo. A. Fowler, lumber agent for the C.P.R., at Ottawa, writes as follows under date of Nov. 17, 1897: The winter rates went into effect on the 15th inst., and in so far as lumber is concerned the only rates which are materially affected by the change are the rates to Montreal, Quebec and points taking same rate. During the summer season we have on seasoned soft wood lumber weighing not more than 3,000 lbs to the M ft. rates as follows to Montreal: From Ottawa $1.00 per M., excess over 3,000 lbs. to the M ft. to be charged for at 4 cents per 100 lbs.; from Arnprior, $1.50 per M, excess 6 cents per 100 lbs. The rates to Quebec during summer season are $2.00 per M ft., excess 8 cents per 100 lbs.; from Arnprior $2.50 per M, excess 10 cents per 100 lbs. The rates during the winter season, in effect from 15th inst., on all kinds of lumber to Montreal are, from Ottawa 5 cents per 100 lbs., from Arnprior 7 cents, and to Quebec from Ottawa 10 cents per 100 lbs., Arnprior, 12 cents; minimum carload, 30,000 lbs.

The rates to Boston and New England points, also all rail rates to New York and New York points, remain unchanged.

## LEGAL DECISIONS OF INTEREST TO LUMBERMEN.

COCKBURN & SONS V. IMPERIAL LUMBER CO.—Judgment in action to enforce an award, tried at Barrie. The arbitrator assessed damages to plaintiff by reason of the detention of their logs on Deer creek during the driving season of 1896 by the act and neglect of the defendants. He allowed for general detention of logs $1,276, and for illegal detention under the lien asserted by defendants $100. The learned judge finds as a fact that the general detention and detention under the alleged lien were both during the months of April and May, and that what was done on the 1st June under the warrant referred to in the evidence was but a continuation of the assertion of the right of lien which defendants made. And that being so, it was referred to the arbitrator to determine a claim, dispute or difference arising under secs. 3 and 17 of R.S.O., 1887, ch. 121, and such claim was that defendants had not complied with the provision of the Act in not obstructing the floating and navigation unreasonably, and was also for damages under secs. 13 and 17 of the Act for wrongfully asserting a right of lien upon the logs. And what the arbitrator did was clearly within the scope of the reference, as provided for by the statute and as contained in the notices. Judgment for plaintiff for amount mentioned in award, and costs of the arbitration and award to be taxed, with interest and costs of the action.

REINSBOROUGH VS. GILL & SWEENEY.—This case was recently argued at Newcastle, N. B. It was an action brought by Charles Reinsborough, of Hardwicke, to recover from Thomas Gill and William Sweeney, of Barnaby River, the sum of $182 for driving logs on the Bay du Vin river in the spring of 1896, and $17 for balance due on a settlement. Messrs. Tweedie & Mitchell conducted the case for the plaintiff and Thos. W. Butler for the defendants. In the spring of 1896 Messrs. Gill & Sweeney had about two million logs in the small streams at the head of Bay du Vin river, while the plaintiff, Mr. Reinsborough, had about the same quantity in the main river. Both commenced driving about the same time, but never came in sight of each other owing to the fact that Mr. Reinsborough's drive was so much nearer the boom and in the main river. The drive of Gill & Sweeney stuck on the 10th of May about 20 miles above the boom. Reinsborough, about the same time, reached the boom with a portion of his drive, the remainder having stranded mostly within three miles of the tide way. When the logs were rafted it was found that 260,000 of Gill & Sweeney's logs had come in with Reinsborough's drive, and Reinsborough brought this action to recover 70 cts. per thousand for driving them. The defendants pleaded that they did not owe the bill, and also filed a counter claim for work done in 1897 by them for plaintiff in a similar way. The plaintiff's evidence disclosed the fact that the settlement for the $17 was not a claim against Gill & Sweeney, but against Gill and one Dalton, which effectually disposed of that item. It appeared by the evidence of the plaintiff that the logs claimed for did not start with their drive, but having run ahead of the main drive of Gill & Sweeney, began to overtake the plaintiff's drive in small quantities. This was some miles down on the main river, and they continued to drop in from time to time till they were in the pond some three miles above the boom, and a quantity overtook them in the pond. No timber driver was called, no notice sent to Gill & Sweeney that the logs were running in, and no attempt made by plaintiff to stack in any logs but his own, but he left the defendant's logs strewn on the river bank and pond, evading them wherever they could be prevented from coming in. Mr. Butler, at the close of the plaintiff's case, moved for a non-suit on the grounds that the claim for balance due on settlement was not against the defendant Sweeney, and could not be considered in a suit in which he was defendant; that the logs, if driven at all by Reinsborough, were driven without the knowledge or consent of Gill & Sweeney, and consequently they were not liable to pay for the work; that the alleged promise to pay, if ever made, was made upon a past consideration and could not support an action. The judge reserved the points and Mr. Butler proceeded with the defence. He went into evidence to show an absolute want of knowledge on the part of the defendants that the work was being done, denied the subsequent promise, and went on to prove that the logs came in without any assistance from plaintiff and also to prove services done by defendants for plaintiff in 1897. When the evidence was all in Mr. Butler renewed his application for a non-suit. The judge intimated that he considered the application well made, and asked the parties if they would agree on the value of the work so the case need not come down again for trial if the non-suit was set aside on appeal. Mr. Butler declined to agree to any value for the work, claiming that the logs appeared, from the evidence, to have come in without any assistance from the plaintiff. The judge left three questions to the jury, which were in substance: 1st. Was the work done by the plaintiff for the defendant in 1897 done without defendant's knowledge? Jury answered, "Yes." 2nd. Were the actions of Gill & Sweeney meant to treat the work as done to their express order? Answer, "No." 3rd. What was the value of the work done by plaintiff for defendants in 1896, if any? Answer, "Nothing." Verdict for defendants was entered up and Mr. Tweedie moved for and obtained a stay of postia for 20 days.

## BRITISH COLUMBIA LETTER.

[Correspondence of the CANADA LUMBERMAN]

THE lumber mauufacturers of this province are determined to leave no stone unturned to secure some relief from the present unfair position in which they are placed by the Dingley bill. They have started to work in a vigorous manner, and are making their influence felt in every possible direction. They realize that the time to act is at hand, and that united effort is necessary before much can be accomplished. The interest in the question is not confined to lumbermen, as witness the following resolution adopted at a mass meeting held at Vancouver on Febuary 2nd: "Resolved, that so long as Canadian lumber going into the United States is taxed, an equal tax should be levied on lumber coming from the States into Canada." Such a resolution adds strength to the contentions of those directly engaged in the trade. As a resolution was passed by Ontario lumbermen some time ago favoring an import duty on lumber, it has been decided to ask them to co-operate with the lnmbermen of the Pacific coast. When the situation is thoroughly understood, there does not appear to be one just reason why the protection asked should not be granted. The lumbermen feel that, when there are prospects of better trade conditions, the advantages therefrom should not be handed over to United States manufacturers. The price of logs is steadily advancing, and with manufacturers compelled to pay more for their raw material, the margin of profit becomes still further reduced. Many loggers have gone out of the business and left for the gold fields to seek more remunerative employment. With the shutting out of the low grade stock now shipped into British Columbia by Washington mills, lumbermen would get better prices for their lumber and could afford to pay more for their logs.

A large sum of money will be spent this year on improvements to the various mills owned by the British Columbia Mills, Timber and Trading Company. At the Westminster mills $20,000 will be expended in putting in new boilers, erecting a new machine shop and for an additional sash and door factory. At Vancouver a new dry kiln will be built at the False Creek mill, four new boilers put in, and a new engine and a big six ton planer added to the plant, besides other machinery for the sash and door factory. The factory building will also be enlarged, all involving an expenditure of $25,000. At the Hastings mill at Vancouver a shed to hold 1,500,000 feet of dry lumber and a new dry kiln will be erected, and the wharves extended very largely. New planers and other machinery will be put in, involving an outlay of $15,000 to $20,000.

Extensive improvements are also nearing completion at the Royal City Mills, New Westminster. Three new boilers have been added, two of which will be used for driving the machinery in the factory. The yards are being provided with plank alleyways, which will greatly facilitate the handling of lumber to be stored in the yards.

### COAST CHIPS.

J. McRae's saw mill at Dueks has been removed to Salmon Arm.

The Victoria Yukon Trading Co., Limited, of Victoria, has been incorporated. The company purpose engaging in lumbering, mining, etc., and is capitalized at $100,000.

The Cowichan Lumber Co., composed of the Boyds of Bobcaygeon, Ont., purpose building a logging railway on Vancouver Island. Their mill will shortly commence sawing.

The British Columbia Mills, Timber and Trading Co., of Vancouver, is trying the experiment of using very thin fifty-two inch circular resaws. It is said to have proven quite successful, and to have effected a large saving in lumber.

NEW WESTMINSTER, Feb. 16, 1898.

## SUBSTITUTES FOR WHITE PINE.

THE natural substitutes for wood are iron and stone, and undoubtedly we would be better off to use these for permanent structures. But fancy our shoes and groceries, etc., shipped in iron crates; the cost of transportation would prevent their use. There are places where substitutes for wood would, to say the least, decrease our comfort and mobility of modern life. The ease of shaping and handling wood is its essential advantage, and if it combines, as does white pine, softness with strength and light weight, in addition to other qualities that make it acceptable, it will be difficult to find a substitute.

In the Eastern United States we have among woods such substitutes in large quantities only in cypress and spruce. Of these the cypress, the supplies of which are not to last much longer than the white pine, is really too good to substitute for pine, having its special adaptations. Spruce, though larger quantities are to be had, has, nevertheless, a more hopeful future, since the pulp industry is developing to incredible dimensions.

To ship timber from the west, where undoubtedly large quantities of serviceable material exist that could replace white pine, is expensive, and only choice grades will stand the cost of transporting it 2,000 to 3,000 miles over the continent.

The South contains no pine to substitute for white pine in those places where its peculiar qualities are called into requisition. Hard pine will necessarily have to be substituted in many cases at a cost of millions in cash for increased charges in work and transportation, and many more in comfort.

But what is it that has made white pine such a unique material? It could be had in every market in enormous quantities in all ordinary sizes and forms! A carload of dry white pine or a white pine shoe box weighs only half what the same quantity of lumber or box of longleaf pine would weigh. Half the effort will saw, plane, shape or nail it; a lath, a piece of flooring shrinks but half as much, and does not "work" afterwards. The foundryman's model of white pine is shaped with ease, and when shaped retains form and size as does the wood of no other pine. For "blind" wood in costly doors and for similar parts in cabinet work, for ordinary doors, for sash and blinds, for house finishing, for the box trade, for shingles and lath, in straight-stave cooperage, for ship's deck and spar, it has no peer; in short, it is in demand for everything where a wood is wanted that is light, soft, easy to work and to season, that shrinks and checks little, does not work, is not eaten by insects, gives no odor or taste, glues well and takes paint, oil and stain. Substitution of other material, it is safe to conclude, will be but a temporary matter, and before the twentieth century closes the white pine of new and permanent forests will be found its only desirable substitute.—The Forester.

## A REMARKABLE SHOWING.

THE Magnolia Metal Company during the last three or four months has received through the mails nearly 3,000 testimonials of Magnolia Metal, or, to be exact, they received 2,827 distinct testimonials.

These testimonials were received from every part of the United States and Canada, and were sent in by railway companies, steamship companies, rolling mills, iron and steel manufacturers of every kind and description, machinists paper mills, cotton mills, woolen mills, wood-working establishments of all kinds, and practically every class of mechanical industry that can be mentioned.

These testimonials came to them in response to a circular letter sent out to all the mills and manufacturers of the United States and Canada, accompanied by a 15 inch rule sent with their compliments, and simply asking if they were users of Magnolia Metal, and, if so, what was their experience.

A very small percentage of firms so addressed ever make response, and taking the number of replies actually received, giving testimony as to the superiority of Magnolia Metal, it has been estimated that at least 100,000 concerns in the United States and Canada are to-day using Magnolia Metal.

The above statement is a very remarkable one and shows the wonderful success that the Magnolia Metal Company has had during the past 10 or 12 years in introducing their metal among the mills manufacturers, jobbers and dealers of the United States and Canada; and their trade is equally as large in foreign countries. This shows what can be accomplished by having a good article well exploited and thoroughly advertised.

# THE NEWS.

—John Radford has established a saw mill at Ingersoll, Ont.

—Scott Bros. are building a saw mill at Eden Grove Station, Ont.

—L. Ironsides, lumber dealer, Miami, Man., has sold out to Mr. Shaw.

—A. Lindsay contemplates rebuilding his steam saw mill at Aylmer, Que.

—Mr. Godbout, of St. Hyacinthe, is building a sash and door factory at Chicoutimi, Que.

—W. H. Asselstine, of Newburgh, Ont., is arranging to erect a steam saw mill at Harlowe.

—A. Du Tremblay, who has extensive lumber mills at Roberval, Que., is building a furniture factory.

—John Bateson & Sons have purchased the saw mill at Orrville, Ont., lately owned by James Matchet.

—T. Bonhomme is about to commence the erection of a saw mill at Papineauville, Que., to cost $3,000.

—The Lancaster Machine Works, of Lancaster, Ont., will shortly place on the market a new circular saw.

—The Rathbun Company, of Deseronto, have registered a trade mark for their pine doors, mouldings, etc.

—The annual meeting of the Bronson & Weston Lumber Company was held in Ottawa on Wednesday, February 2nd.

—The Niebergall Stave & Lumber Co., of Staples, Ont., have placed a new steam vat in their mill and hoop factory.

—The Hull Lumber Co. contemplate the reconstruction of their mill at Hull, Que., which was destroyed by fire last year.

—The Hawkesbury Lumber Co., of Hawkesbury, Ont., are now rebuilding their saw mills which were destroyed by fire about two years ago.

—The South River Lumber Co., of South River, Ont., has doubled its capital stock. The old water mill has been fitted up for the manufacture of shingles.

—Mr. E. F. Stephenson, Dominion Crown Timber Agent, recently returned from Winnipeg after an extended tour through British Columbia and the Northwest Territories.

—The Quebec government will offer for sale, on the 22nd inst., timber limits in the Lake St. John, St. Charles, Saginaw, St. Maurice, Lower Ottawa and St. Francois districts.

—A report received by the Department of Trade and Commerce at Ottawa states that there is an opening in South Africa for Canadian lumber, particularly inch planed boards.

—The firm of Marlatt & Housser, lumber dealers, Portage La Prairie, Man., will likely be dissolved. It is understood that Mr. Marlatt's interest will be purchased by Mr. H. Byrnes, of Winnipeg.

—J. W. Cruickshank, of Truro, N.S., is doing a large lumbering business this season on the Little Branch of the Stewiacke river, for Alfred Dickie, having about forty men in the woods.

—Isaac N. Kendall, of Ottawa, has gone to the Crow's Nest Pass, where he will superintend the erection of a large saw mill for the C.P.R. It is said the structure will be one of the largest in Canada.

—It is estimated that there is consumed in the New York market in one year over 1,500,000,000 feet of lumber. The total receipts by rail of lumber, box shooks, etc., during the year 1897 was 27,311 cars.

—The owner of Horse Island, situated at the south-east of Manitoulin Island, purposes erecting a large saw mill thereon and building a railway back into the bush for the purpose of taking out cedar and hardwood.

—Mr. J. White, alien labor agent of the Ontario Crown Lands Department, recently visited the lumber camps in the vicinity of Huntsville in search of American workmen. It is said that thus far very few have been found.

—McLaren & McLaurin have just completed the erection of a steam saw mill at East Templeton. The mill has a capacity of 150,000 feet per day, and is fitted with modern machinery. About 80 men will be employed.

—Fifteen men in McNair's lumber camp on the Tobique river, New Brunswick, were recently taken seriously ill from eating diseased pork. The pork was taken in last winter, and the carriers, to lighten the load, threw away most of the pickle.

—The Restigouche & Western Railway Co. is building a line of railway from the Restigouche across the province of New Brunswick to the river St. John. The road will be about 100 miles long, and will open up a large tract of heavily timbered property.

—The Timber News, of London, Eng., says that another proof of the kindliness borne by the Hon. J. K. Ward, lumberman, of Montreal, towards his native Manxland, was afforded last Christmas by a donation of £40 for various charities in the island.

—The Bronson & Weston Lumber Co., of Ottawa, are now placing in their mill a system of carriers for the purpose of transferring the sawdust to a point where it can be conveniently carted away. Up to the present it has not been decided to erect incinerators.

—At a recent meeting of the Black Rock Business Men's Association held at Buffalo, a resolution was adopted requesting representatives Alexander and Mahaney to support any measure providing for the reduction of the present duty on Canadian lumber.

—According to the Insurance and Finance Chronicle, saw and pulp mill property was destroyed by fire in 1897 to the value of $467,600, and the insurance was $224,600. The largest fires were at Lake Megantic, Que., loss $35,000; Three Rivers, Que., loss $34,000; Hull, Que., loss $125,000; and a pulp mill at East Angus, Que., loss $125,000.

—The Ashland Press gives the following average wages of men in northern Wisconsin logging camps this winter: Foremen, $40 to $50 per month; teamsters, $26 to $30; sawyers, $26 to $30; chainers, $24 to $26; swampers, $20 to $26; cooks, $40 to $50; cookees, $20 to $24, and scalers $60 to $125. These wages are not so very bad for an off year.

—The Ontario Forestry Commission recently inspected the method of utilizing coarse lumber in vogue at the factory of the Rathbun Company, at Deseronto. Prof. Goodwin, of Queen's University, Kingston, who was also present, gave a brief address as to the instruction of forest rangers and other government employees in forestry work. In the spring the Commission will likely make a somewhat extended tour of the Lake Temiscamingue region.

—Mr. Thomas Southworth, Clerk of Forestry for Ontario, is taking steps to ascertain the commercial value of jack pine, which is found in large quantities throughout the province, arrangements having been made with the Imperial Institue, London, Eng., whereby the timber will be scientifically tested by the engineers of the London County Council, with a view more particularly of learning its suitability tor street paving material.

—It is claimed that as a result of lumbering operations on the Musquodoboit river, in the vicinity of Halifax, N. S., the low lands are flooded and damaged by water. A petition has consequently been presented to the County Council asking that a by-law be passed preventing lumber companies from driving logs and flooding the lands on said river from the 10th of May to the 1st of October. It is believed that driving operations can be completed between the 1st of October and the 10th of May.

—The annual meeting of the Tracadie Lumber Co., which will conduct extensive lumbering operations in New Brunswick, was held in Bangor, Maine, last month, at which directors were elected as follows: President, F. W. Hill; treasurer, C. D. Stanford; general manager, H. B. Foster; clerk, L. C. Tyler. The old board of directors was elected, consisting of F. W. Hill, C. D. Stanford, H. B. Foster, H. H. Fogg and L. C. Tyler. This company have erected a mill at the mouth of the big Tracadie river, and will manufacture both spruce and pine.

—A movement is on foot to form a company for the export of furniture to Europe, reference to which was made in this journal last month. The new concern will be known as the Canadian Furniture Exporting Co. Among the promoters are J. G. Hay, Owen Sound, J. S. Anthes, Berlin, and John R. Shaw, secretary of the Ontario Furniture Manufacturers' Association. It is proposed to erect a new factory for the manufacture of goods for export, and to establish a warehouse in England. A change in the manner in which the goods are shipped has been made. The former custom was to export the furniture in piece and put the articles together on the other side, the object being to save freight charges by closer packing. It has been found that this saving in freight is more than offset by the greater cost of putting the goods together in Great Britain, hence the change.

## CASUALTIES.

—Jos. Lambert, of St. Adelphe, Que., received injuries by a falling tree while working in the woods, from which he died.

—Napoleon Millette, of Ottawa, while working on Eddy's limits in Temiscamingue, was struck by a falling tree, which killed him instantly.

—James Ellis was killed at Anderson's lumber camp near Gravenhurst. He was felling a tree, and was struck on the head by a limb. His age was 30 years.

—An employee of the Rat Portage Lumber Company, named William Twist, was recently killed by a falling tree in the company's camp near Manitou Lake.

## PERSONAL.

Mr. Alfred Dickie, the well-known lumber dealer of Lower Stewiacke, N.S., sailed a fortnight ago for Liverpool, Eng. He will be absent perhaps two months.

Mr. T. G. McFarlane, of Brandon, Man., has recently been appointed assistant crown timber agent for the Yukon district, and has left for the scene of his duties.

Mr. E. H. Bronson, M.P.P., of Ottawa, and a member of the Bronson & Weston Lumber Company, has decided to retire from political life, owing to ill health. General regret is expressed that Mr. Bronson should have been compelled to take this step.

The Liberal Conservatives of London, Ont., have chosen Mr. Adam Beck, veneer manufacturer, as their standard bearer for the forthcoming election, his nomination being unanimous. Mr. Beck is very popular, and should make a strong fight.

The death is announced of Mr. Robert Rankin, head of the firm of Rankin, Gilmore & Co., of Liverpool, Eng., which house has been established for over 50 years. A branch of the above firm was established in St. John, N. B., by the late Mr. Rankin. Besides doing a large lumber trade, considerable shipbuilding was carried on. In 1842 Mr. Rankin went to Liverpool and was succeeded at St. John by Mr. John Pollock. The St. John branch was closed in the seventies.

## OBITUARY.

The death is announced of Geo. Morrow, brother of David Morrow, M.P.P. for Sunbury County, N.B. He was a large lumber operator and mill owner.

John Dewar, of St. George, N. B., died at his residence there late in December. Deceased was a successful business man and operated the Dewar Lumber Mills, shipping large quantities of lumber to the United States.

Peter H. Colton, one of the best known timber brokers in Canada, died at Pembroke, Ont., on January 10th. While travelling the Mattawa limits of the Bronson and Weston Co., he contracted a severe illness, which resulted in his death. He was considered by the lumbermen of the Ottawa valley an authority on the value of timber limits, and his services were constantly in demand.

Geo. W. Hanes died at Victoria, B.C., early in January. Deceased was born at Bangor, Maine, in the year 1833, his father being a lumber merchant, with whom he was engaged until 1852. He then removed to California, and continued in the lumber business until 1864, when he removed to British Columbia. During 1863-64 he erected a saw mill at New Westminster for Webster & Milliard, and then removed to Moodyville, remaining in charge of the mill there until 1876. His late years were devoted to the real estate business.

## TRADE NOTES.

The Northey Manufacturing Co., of Toronto, have secured the contract for the pumps to be used on the Canadian Pacific Yukon steamers.

The Jenckes Machine Co., of Sherbrooke, Que., have recently purchased the plant of the Phelps Machine Co., at Eastman, Que, and will continue the manufacture of the Dake engine and steam feed and other specialties.

The McEachren Heating & Ventilating Co., of Galt, Ont., have just put in a double dry kiln and a blast heating system for the Eckardt Casket Co., of Toronto. They also put in two planing mill fans.

The Globe File Mfg. Co., of Port Hope, Ont., have recently added to their extensive plant what is known as the steel rope drive system for operating their machinery, in place of the old cog wheel system. The work was carried out by the Dodge Wood Split Pulley Co., of Toronto.

The annual meeting of the Montreal Lumber Company, Limited, was held on January 20th, at the office of Mr. John McKergow, President. The usual statements were presented, which showed that the results thus far had been satisfactory. There was no change made in the directorate or the management. Though this company has only been in existence about six months, it is stated that it has handled nearly five million feet of Ottawa pine. Purchases have also been made which should secure for the future an increased trade.

Messrs. Baldwin, Tuthill & Bolton, of Grand Rapids, Mich., have sent us a copy of their 1898 catalogue, in which are illustrated over 60 different saw-fitting machines adapted to every requirement in the care of bands, gangs, circulars, rift gangs and band re-saws. This book also includes a lengthy treatise on the fitting of saws, which matter is calculated to render it of direct advantage to saw filers, and, in fact, to all practical millmen and factory operators. The many valuable hints on the care of saws, construction and use of emery wheels, etc., make the work of more than ordinary value. The company state that they desire to mail copies to operators of sawmills and wood-working plants, and in particular to saw filers. They have endeavored to produce the best book of its kind published up to date, and believe that the majority of those receiving it will deem it worthy of careful examination and preservation.

A valuable addition to the literature of British Columbia is the Year Book which has just been published by Mr. R. E. Gosnell, Legislative Librarian, with a copy of which we have been favored. Of the many works which reach our table, most of them of considerable merit, the credit for the most complete and carefully prepared work yet received must be given to the author of the British Columbia Year Book. Besides the facts and figures relating to the natural resources of the province, there is sufficient of an historical, political and sociological character to render the book interesting and instructive to all. There are over 500 pages of letter-press and illustrations, so arranged as to present a most pleasing appearance. To even mention the interesting features would involve more space than can here be given; suffice it to say that among them are the following: An historical review, including portraits of early navigators and explorers, a group of pioneers and early legislators, portraits of members of parliament, illustrations of government buildings, a treatise of 100 pages on mines and mining, with illustrations, a description of the fisheries, and maps of different districts in British Columbia. The forestry wealth is also referred to at some length, and statistics given showing the lumber cut for the past nine years.

# WOOD PULP DEPARTMENT

## WOOD PULP IN GERMANY.

The future of the wood supply in Germany is the subject of an interesting article in the Wochenblatt. Fears have often been expressed whether, with the increased demand for pulp, the German forests will keep pace with the increased consumption.

As by law a rational forest culture is maintained, by which the cutting down must be in a certain proportion to the whole forest area, an absolute break-down need never be expected, the fear only is whether the quantities available will suffice.

On this question, after careful inquiry, the writer of the article comes to the conclusion that such a fear is groundless, because the national forestry will be able to increase from year to year the total of the available quantity. Reforms in this respect have been introduced for some time, and will perhaps slowly but steadily give very satisfactory results.

The fear for the German pulp industry comes from another side. The prices of German raw wood are going up, and if no check takes place there is the chance to be considered that foreign pulp will be produced cheaper, and will in time replace the German pulp, if the latter must follow the higher prices of the raw material.

This is all the more likely, as foreign wood would not pay so well to be imported in the raw state, but rather as the manufactured article. The carriage on the latter would in proportion be cheaper than on the former. The forest owners would ultimately suffer from this, because it is to their interest to keep the pulp industry in a healthy condition.

From this consideration it would appear that the indiscriminate raising of the price of raw wood is likely to injure the forest industry. The forest owners are urged to keep prices steady by increasing the quantities put upon the market without running into the opposite extreme.

## HEMLOCK PULP WOOD.

The hemlock of Michigan and Wisconsin is to have a value other than that for conversion into lumber. Last year it was stated that a party bought up 5,000,000 feet of hemlock for pulp wood in the upper Wisconsin valley and at points on the Wisconsin Central railway. Now, says the Northwestern Lumberman, it is stated that N. H. Brokaw, of the Kaukauna Fibre Company, of Kaukauna, in the Fox river valley, Wisconsin, has purchased 5,000 to 6,000 cords of hemlock to be cut and delivered this winter, which will be worked up in the Brokaw mills. This shows that hemlock for pulp making in Wisconsin is a growing factor in the supply. It is very possible that hemlock in the northwest will assume as much importance in the paper and pulp industry as has spruce in New England and New York.

With this result it plainly can be seen that hemlock as a merchantable wood will acquire great importance. It has rapidly come to the front in recent years for conversion into lumber, and operations in that line this winter are on a scale more extensive than ever before. Without doubt hemlock lumbering is to greatly increase in future years in the three old northwestern pine states. With a corresponding growth in the demand for hemlock pulp wood there will be such a scramble for that kind of timber properties as was not dreamed of a few years ago.

In the Eastern States 60 per cent. of the spruce annually cut goes to the pulp mills. It is possible that an equal percentage of the hemlock in the northwest will, within a few years, be devoted to a like purpose, leaving only 40 per cent. to be cut into lumber for the supply of the general and local demand. Thus we can see what is promised for hemlock in Michigan, Wisconsin and Minnesota.

## THE BRITISH WOOD PULP MARKET.

In mechanical pulps, says Wood Pulp, of London, Eng., there is really very little to report, but there is likely to be keen competition between Scandinavia and Canada for the European market. The Sault Ste Marie Pulp and Paper Company—the largest mechanical mill in the world—has recently put in drying machinery with the view of shipping the bulk of its pulp to the Europeau markets, and it is reported from the other side that it has already placed in England every ton it can manufacture during the next six months.

The abnormally mild winter in Scandinavia may later on have a tendency to stiffen the market, as owing to the lack of snow the work of getting the logs from the forests to the rivers has been impeded.

Of course, many mills have large stocks of wood on hand, and the market may not be affected by this cause until later on.

Sulphite pulps are slightly easier for the moment, mainly on account of the large shipments of American pulp sent on consignment. These are alleged to be job lots, but however that may be, the dirty condition of the bundles has necessitated them being forced on the market at low prices, and the result is likely to be so unfortunate to the shippers that they will not repeat the experiment. On the whole, however, as the quantities available do not at present exceed the estimated consumption, prices may be maintained a little longer.

Soda pulps are scarce, and prices are likely to be maintained over the year.

The Ontario Forestry Department has been notified that a large firm of American pulp jobbers, with headquarters in Wisconsin, and who use on an average 50,000 cords of pulp wood per year, the larger proportion of which was obtained in Ontario, have decided this year to obtain their supply in Wisconsin. This will considerably curtail the output from the western and newly settled districts of the province, and will cause some hardship among settlers, many of whom rely upon sales of pulp wood for much of their livelihood.

## PULP NOTES.

John Mather, of Rat Portage, Ont., is said to be negotiating for the erection of a large pulp mill at Keewatin.

A correspondent of the Gleaner points out the advantages possessed by Fredericton, N.B., as a site for the manufacture of pulp.

The Victoria & New Brunswick Pulp Co., of Woodstock, N.B., propose building a dam at the Tobique Narrows and erecting a pulp mill.

Mr. McDonald, of Montreal, will probably erect a pulp mill at St. Joseph d'Alma, utilizing the water power owned by Narcisse Gariepy, of Bay St. Paul.

The Grand Falls Power & Boom Co. have asked the New Brunswick government for a renewal of charter. It is proposed to build pulp mills and other works at Grand Falls, N. B.

The Tourville Lumber Mills Co. is said to be considering the establishment of a large pulp and paper mill at Louisville, Que. The government has been asked to dredge three miles of the river to give the necessary water.

On March 5th the new pulp mills of the Chicoutimi Pulp Company, at Chicoutimi, Que., will be formally opened by the Commissioner of Crown Lands for Quebec. The company have issued invitations to the members of the legislature, journalists, and others interested.

Specimens of the wood pulp manufactured at the Chicoutimi pulp mills were laid on the table of the Quebec Legislature during its recent session. The Chicoutimi Pulp Co. have placed contracts for the cutting of 13,000 cords of pulp wood during the present winter.

Incorporation is asked for the Jacques Cartier Pulp and Paper Co., of Montreal, for the purpose of manufacturing pulp and paper, lumber, etc., and developing water powers on the Jacques Cartier river. Robert Law, merchant, Wm. Currie, paper manufacturer, and others, are interested.

The Shawenegan Manufacturing Co., of Shawenegan, Que., has been granted incorporation, to manufacture pulp, paper, acetylene gas, etc., with a capital of $500,000. Peter Lyall, contractor, of Montreal, and Charles Riordon, paper manufacturer, of St. Catharines, are interested.

The material used by the new pulp mill of Harvey & Co., of St. Johns, Newfoundland, is said to be a species of dwarf timber, principally spruce, which produces excellent pulp, but has little value for any other purpose. The mill employs 200 hands, and is driven by the water power of an immense flume.

The trade and navigation returns for the year ending June 30th, 1897, states that the value of pulp wood exported to the United States was $667,221, as against $600,225 for the previous year. Of wood pulp the export to the United States amounted in value to $576,720, showing a gain over 1896 of about $20,000.

Mr. M. F. Mooney, who is interested in the proposed pulp mill at Mispec, near St. John, N.B., to be built by the St. John Pulp Co., is at present in Scotland for the purpose of conferring with the directors of the company. It has not yet been decided whether the output will be 25 or 50 tons per day. Upon Mr. Mooney's return the work of construction will likely be proceeded with.

The Canadian correspondent of the Paper Mill, New York, advocates the lowering of the duty on paper making machinery coming into Canada from the United States. He argues that it would greatly promote the development of this country's natural paper making resources, that owners of mills would take advantage of it to increase the efficiency of their equipment, and that new mills would be built.

The Dufferin Falls Lumber, Pulp and Paper Co., of Montreal, is a new concern seeking incorporation, with a capital of $300,000. Among the promoters are Wm. Currie, paper manufacturer, and James T. Shearer, lumber merchant. This company has purchased the properties on the DuLievre river at Buckingham, Que., belonging to the estate of Ross Bros., and will commence the manufacture of pulp and paper on an extensive scale.

A barker in the Treadwell Mills, Plattsbug, N.Y., recently went to pieces. The barker is a steel disc, three quarters of an inch thick, and about four feet in diameter. On one side are four knives to cut the bark from the wood, on the other side are fans to blow the shavings away from the barker. The machine is heavily enclosed in iron. An accident such as happened is said to be without precedent in the record of pulp making. A large piece of the barker went through the roof and was carried 300 ft. from the mill.

**FELTS FOR PULP MILLS** 20 years in the business — the first to make Felts in Canada; capacity 1,000 lbs. per day. All our Felts are woven endless, without a splice. Our Felts will last longer and make dryer Pulp. All up-to-date mills use our Felts. New mills, when in need, write for samples and prices.

**HAMELIN & AYERS, Lachute Mills, P.Q.**

Mr. J. W. Woodward, of 1003 Park avenue, Omaha, Neb., has issued a book of much value to lumbermen, wood-workers, etc. It is entitled "The Lumberman's Ambidexter," and is so designed as to be a model of convenience. This feature of the book has been patented by the author. The tables are so arranged that by a simple multiple or divisor of two you can find practically the product of any number of pieces of any size of lumber made, barring four foot lengths, which require a division of twelve foot by three; or for inch and a quarter, stock widths, it requires adding one-fourth to one inch totals.

A recent issue ot the Northwestern Lumberman says: "Bill" Murray, of St. John, king of log operators of the province of New Brunswick, together with Charles T. White, of East Apple river, N.B., and George E. Barnhill and John E. Moore, of St. John, N. B., were in town last week, according to the program already announced in this column. They were more than pleased with New York, though not more than New York was with them. It is rarely that any visitors appreciate the metropolis more than they did. It is worth having a metropolis if only to furnish pleasure in the expansive quantities that these gentlemen enjoyed. They report that our lumber tariff is a "corker" and shuts them out of the United States completely, except for lath, and that this commodity can only be supplied to our far east market. To offset this, however, they say their trade with England is in excellent shape.

## LUMBERMAN'S ASSOCIATION
OF ONTARIO

**NOTICE**

The Annual General Meeting of the Lumberman's Association of Ontario will be held in the Rotunda of the Board of Trade of the City of Toronto, on Monday, the 28th February, at Two o'clock p.m.

By order,
J. B. MILLER, Sec.-Treas L. A. O.

NOTE.—The above notice is given in accordance with the terms of the Constitution. It is proposed, however, to meet "pro forma" and adjourn until the 22ND MARCH, at the same hour and place.

## Robt. Bell, Jr. : Hensall, Ont.

Mr. Alex. Macpherson has resigned his position as secretary-treasurer of the Alpha Rubber Co., Montreal, to become the manager of the Canadian Rubber Company's Toronto branch.

The mill of the Port Blakely Mill Co., at Port Blakely, Wash., is credited with having cut more lumber during 1897 than any other mill in the United States. It cut 97,777,517 feet of lumber and 15,744,500 lath, says the Wood-Worker. Our United States friends should visit Canada if they want to see large saw mills. J. R. Booth's mill at Ottawa cut last year 130,000,000 feet of lumber, to say nothing of lath, etc.

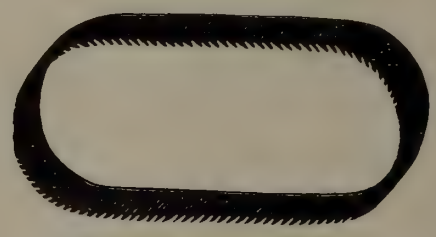
# WHY BAND SAWS BREAK



SIXTEEN REASONS, AND HOW TO AVOID THEM

Being instructions to filers on the care of large band saw blades used in the manufacture of lumber.

A book filled with valuable information on the care of band saws. Giving the reasons for breaking; analyzing each reason; giving instructions to dispense with the causes as laid down in each reason; and full details on filing and brazing. The proper styles of hammers to use are illustrated and described, and views of blades showing the blows of the different styles of hammers form an important part of the illustrations. Improper and unequal tension are then treated, and the manner of properly setting irregular teeth is described. In connection with the treatise is a his, tory of the invention, manufacture and use of the saw from its origin to the present time. The work in whole makes an accumulation of information such as has never before been published.

The book is printed on fine paper, good clear type, and is handsomely and substantially bound in cloth. It will be sent to any address on receipt of the price, **ONE DOLLAR.**

## THE NATIONAL WHOLESALE LUMBER DEALERS' ASSOCIATION.

By far the most important organization of its kind in the United States is the National Wholesale Lumber Dealers' Association, which embraces a large number of the prominent wholesale dealers of the Eastern States. This association held its sixth annual meeting at Cleveland, Ohio, on Wednesday, March 3rd, the business which formerly occupied two days being, by judicious arrangement, executed in one day.

There was a fairly good attendance from Buffalo, Philadelphia, Cleveland, Saginaw, Tonawanda and other cities. The following Buffalo houses were represented: Montgomery Bros. & Co., Superior Lumber Co., Buffalo Hardwood Lumber Co., Empire Lumber Co., Noyas & Sawyer, Charles M. Betts & Co., Haines & Co., H. M. Loud & Sons Lumber Co., Hurd & Hauenstein, Hugh McLean & Co., J. C. Anthony & Son, and Underhill & Poole. The Tonawanda contingent included representatives of Smith, Fassett & Co., Rider & Frost, W. H. Sawyer Lumber Co. and H. M. Tyler & Co.

We notice that the membership of this association also includes the names of E. C. Grant, of the Ottawa Lumber Company; E. H. Lemay, of Montreal; and the Gillies Lumber Company, Ottawa.

Space will only permit of brief reference to the most important subjects considered. Following the reading of the address of the president, Col. Betts, and the presentation of the secretary's statement, Mr. Edward F. Henson read the report of the Fire Insurance Committee, which stated that there were five insurance companies in the district devoted solely to the interests of lumbermen. They were all successful, the one most so being the Northwestern Retail Lumber Dealers' Insurance Association, which had been the means of securing very cheap insurance for lumbermen.

A resolution was passed favoring a uniform bankruptcy law. The report of the committee on membership recommended that the secretary visit the lumber districts and solicit new members for the association. Mr. Pendennis White, of Tonawanda, read an interesting paper on "The Scalper and the Illegitimate Trade," which created a lively discussion. Another interesting question discussed was what an article costs the manufacturer to produce and sell, and what it costs the lumberman not manufacturing to put his lumber on the market. The general opinion seemed to be that ample pains was not taken to ascertain what the lumber actually cost the dealer or manufacturer.

The choice of the association was unanimously in favor of Hon. John N. Scatcherd, of Buffalo, as president. Mr. Scatcherd, whose portrait we present, is of the well known lumber firm of Scatcherd & Son, who handle large quantities of Canadian hardwoods. His election should be a source of gratification to the trade at Buffalo, while all agree that he is eminently qualified for the duties which he will be called upon to perform. John S. Eastabrook, Saginaw, and Robert C. Lippincott, Philadelphia, were chosen first and second vice-presidents respectively. The convention closed with a successful banquet.

HON. JOHN N. SCATCHERD,
President-Elect National Wholesale Lumber Dealers' Association.

## TIMBER RESOURCES OF THE KLONDYKE.

MR. Ivan Petroff, special agent of the United States government in Alaska for the tenth census, has furnished some interesting information regarding the forests of Alaska. The trees are mainly evergreen, the spruce family predominating. White birch is also found throughout the region that supports the spruce, chiefly among the watercourses. The alder and willow are found on all the lowlands, reaching beyond the western and northern limits of the spruce. A poplar resembling the cottonwood of the United States, and which, under favorable circumstances, attains a large size, is also found in the timber sections of Alaska south of the Arctic circle. As is well known, there are considerable forests along the south Alaskan coast, being a continuation of the great forests of Washington and British Columbia, the south-eastern Alaskan climate being very similar to that further south, though, of course, somewhat colder.

## POSSIBILITIES OF TRADE WITH FOREIGN COUNTRIES.

MR. Edmund E. Sheppard, Dominion Trade Commissioner to Mexico, Central and South America, has submitted his final report to the Department of Trade and Commerce, in which he refers at some length to the possibilities of increasing our trade with these countries. His observations and conclusions of the lumber trade are of special interest to Canadian manufacturers, and are given below:

### LUMBER.

Returning to our starting point, Mexico does not take the lumber from Canada that should be exported to that country. Her trade is nearly all with the Southern States of North America, which, owing to contiguity on the Gulf side, affords a more available source of supply. Nevertheless, in white pine and spruce on the Gulf side and British Columbia pine on the Pacific side, agents of our lumbermen should do a very profitable business.

BRAZIL.—In Brazil, owing to the fact that an insect attacks white pine and burrows through it until it is almost like a handful of ashes, white pine is little used except for decorative purposes and doors and windows, where it is needed for its lightness, and is protected by varnishes and paint. Yellow pine, owing to the large quantity of pitch it contains and comparative freedom from insect attack, is esteemed preferable. In my extended report on Brazil, I have given the statistics of this trade. It amounted in the year named to only about $52,000. Already one Canadian agent at least has endeavored to increase this export, and in the interior and the southern parts of the country the importation of material suitable for window-frames and doors should be very large; but as I have before remarked, it will have to be pushed under personal supervision, the broken cargoes from United States ports being more acceptable than our large direct cargoes.

URUGUAY.—Uruguay imported in 1896 $517,000 worth of pine, $500,000 of it from the United States. The total imports of timber were $771,000 (gold).

ARGENTINA.—Our direct export of lumber to Argentina in 1896 was $410,000; in 1897 it was $538,000, and can be very largely increased, as the woods of that country suitable for lumber are grown nearly altogether in the south towards Patagonia and are very heavy and not adapted to the purposes for which white pine is used. In the three countries last enumerated spruce is nearly altogether brought from Maine, and handling it is already a very large business. The export of portions of houses already prepared is successful in but few countries, owing to the tariffs, but the export of white pine lumber to Argentina, there to be milled and made into doors and sashes and frames in the yard where it is received, should be a very profitable business, for of all the countries of the South, Argentina is most rapidly increasing in population, the stretches of arable land being enormous, and the erection of small dwellings proceeding at a very rapid rate. The export to Argentina of lumber suitable for the fitting of cattle vessels is also an important feature, and is already to a considerable extent in the hands of a Canadian who is familiar with both the lumber and cattle business, but unfortunately he is not taking all his supplies from this country. Our lumber business to Argentina, instead of being about $420,000 per annum, should be five times that sum. A table I have prepared shows the average movement of lumber, as well as of other import articles, shipped to the River Platte, which includes Uruguay and Paraguay.

While I was in Argentina Congress was in session, and what was considered the unneighborly conduct of the

United States in the, to them, most irritating tone and text of the Dingley Bill, seemed likely to be practically resented by the passage of a law materially increasing the duty on yellow pine from fifteen to twenty-five per cent. As these increases are made not only by raising the tariff, but by raising the rate of assessment on the foreign goods received, it was quite possible for Argentina to make a discrimination even to the extent of forty per cent. without incurring the charge of open discrimination against a nation having the "most favored nation" clause in its treaty. No goods in any of these countries are received at a "per invoice" valuation, an arbitrary value being placed upon them and all goods of any specified class being assessed alike.

No country in South America offers a better opening for the lumbermen of Canada than is afforded by Argentina, its chief city, Buenos Ayres, having a population of nearly 700,000, while other principal cities are being built up very rapidly. Foreign decorations and woodwork of the most elaborate sort are popular in that country. These for a while were discouraged by the hard times, but since the good harvest just gathered, commercial conditions are better and likely to improve. The prospects of peace and of permanent and progressive government are also excellent. A large amount of British capital and the industry and hopefulness and aggressiveness of both the business men and the poorer classes, all point to Argentina as an exceedingly good market, which I am informed is to be looked after by a resident Canadian commercial agent, who will also have to do with the commercial affairs of Uruguay as they affect Canada.

CHILI.—By the kindness of the British Vice-Consul at Valparaiso, I received the following statement as compiled from the most recent returns showing the imports into Chili of timber during 1896:

IMPORTS OF TIMBER INTO CHILI DURING 1896.

| | | | | | |
|---|---|---|---|---|---|
| Building Timber, | Great Britain... | 500 sq. metres ; | value, £ | 28 |
| " | " | United States... | 2,667,758 | " | " | 148,910 |
| Dressed | " | " | " ... | 175,772 | " | " | 11,117 |

This indicates that the whole trade was only in the neighborhood of $800,000, Canadian money. There were no evidences of any direct importations from Canada, though I was informed by Mr. Compton, probably the largest dealer in the republic, that a certain amount of British Columbia lumber was received, though his business was altogether with San Francisco. This being the case, I was justified in my remark at the Vancouver Board of Trade that in Chili our lumber was unknown as such, i.e., as British Columbia lumber. Objection, however, was taken to it by a local dealer, who said he had sold British Columbia lumber on the Pacific coast. Our natural prominence in the lumber trade is only self-utilized in the finding of a market for occasional cargoes if they are not known as being composed of British Columbia lumber.

Chili has large forests of her own in the southern portions of the republic. In many respects they are fortunately situated, being, to a Canadian mind, not remote from rivers and seaports, but the methods of lumbering are so crude and the milling so rough and uneven that hitherto native lumber has not had the sale which it should have enjoyed.

The Chilian lumber is practically all hardwood, some of it being exceedingly fine and much resembling our maple. Other samples, darker in color, resemble walnut and cherry, and a very attractive substitute for oak is also found. The logs are large and mills are being built, and improved facilities for marketing these different varieties will soon change the complexion of the Chilian lumber trade. The protective spirit, which is exceedingly strong through all the South American republics, is demanding in Chili an increased tariff on foreign timber. Congress was in session while I was in Santiago, and a very great increase of the import duty on lumber and codfish was being discussed. The speech indicating proposed changes in the tariff had been delivered, and, as it happened, the duty on both codfish and lumber, two of Canada's principal exports, was likely to be nearly doubled. As before stated, the Minister of Finance assured Mr. Thompson, the Canadian commercial agent, and myself, that on our representations the particular duties would be left as they were.

The prospective change in Chili's lumber business threatens British Columbia lumber more than it does white pine, for while the republic has a substiute for the liarder wood, the lighter material must always be brought from a foreign country. For this reason even a duty of 35 or 60 per cent. will be unable to exclude our product if offered there in proper shape and unencumbered with unnecessary expenses, such as are incurred by passing it through the hands of middlemen. Though the market is not a large one, its present condition is more favorable to Canada than to any other country. Chili, however, is not in an exceedingly prosperous condition, nearly all of her possibilities, except lumber, having been pretty thoroughly exploited. The low price of nitrate has made it very difficult for the nitrate companies in the north to export anything like the old-time quantities. As Chili's revenues are quite largely derived from export duties on nitrate, this has caused a serious embarrassment. Enormous expenditures—for a country of Chili's size, fabulous expenditures—on the navy have made her obligations very great, and the support of her forces on land and sea is very severe, and, some might say, an almost impossible task. The Chilians are a vigorous and aggressive people, seem to live well and to build for comfort and a considerable amount of show; and notwithstanding her financial difficulties created by over-expenditure, the country contains much wealth, is fairly well cultivated, and can be relied upon as a fairly good market.

PERU.—This republic, rising from its long period of depression caused by war with Chili and the much more recent but terribly sanguinary revolution, is showing many elements of prosperity. With singular if not simulated neighborliness, she seems to buy as much as possible from Chili, but her lumber business is a good one, for Canada especiallv. This is also true of Eucador, her northerly neighbor, the chief seaport of which, Guayaquil, was recently destroyed by fire and is being rebuilt nearly altogether with wood, and very largely in the insecure and old time fashion. Ready-built houses on account of pressing necessity are admitted free.

The Pacific coast of Columbia is showing very little enterprise, and but a small amount of building is being done. What lumber is used is taken almost entirely from San Francisco, which acts as shipper for Puget Sound, from which, no doubt, much of the stock comes.

CENTRAL AMERICA.—The Pacific markets of these republics for lumber are nearly altogether in the hands of San Francisco people, and this is true of nearly everything. It also seems to me no difficult task for enterprising Canadians to enter and dispossess the present owners of the market, but this will never be while they rely to so large an extent upon the co-operation of Puget Sound and San Francisco merchants. In my opinion they rely too much on occasional orders received in this way, and on the imperfectly organized enterprise in the direction of shipping now and then a few unbroken cargoes. This may not be true of exports to countries with which I am acquainted, but in regard to Mexico, Central and South America, I think it can be said that they are preferring a small certainty to a much larger business which could be had by unity and concerted action confined to Canadian mill-owners.

BROKEN CARGOES.

One of the most positive indications of the necessity of Canada having a distributing point of her own for commerce such as reaches such ports as I am reviewing, is found in the fact that merchants and forwarders in Mexico, Central and South America, when ordering goods, very often ask that the cargo shall be completed with lumber of stated lengths and thicknesses, or in ordering part of a cargo of lumber, specify other articles that they desire to complete the shipments. These orders, of advantage to Canada, almost invariably go to New York, where everything can be produced on short notice. The orders for lumber sometimes reach Canada, but for other articles the warehouses of Brooklyn and New York are ordinarily sufficient for supply. In this way we are continually passed over and our reports of commerce are apparently such as not to encourage the belief that we can fully provide everything that is desired. Next to personal solicitation for orders to be made on behalf of our merchants and exporters, stands the necessity of forcing buyers to the world's market to understand that we are sellers, producers and forwarders.

After writing the foregoing portion of this report, I mentioned to a gentleman well acquainted with Canada's output of lumber that in the year 1896 we appeared to have sent only about $410 000 worth to Argentina. He stated that these figures must be incorrect, as he was cognizant of that amount, and perhaps nearly twice that amount of lumber, going to Argentina from the Ottawa Valley alone. He stated that this lumber had nearly all been shipped in cargo lots to Boston, where it was embarked for the sonth. He also stated that a special cut of lumber, 12 inches by 14 to 16 feet, made from smallish logs milled in the Ottawa Valley, was a great favorite in Argentina, insomuch as the knots were of a small size, and when the board became dry and the knot fell out a large hole was not left in the board. I had to do with a dispute over what was pretended was a cargo of this Canada lumber at Buenos Ayres, and at once recognized the description. The cargo was rejected because it did not come up to the specifications, and was classed as "Michigan Lumber." Every year a large exportation of the same brand of lumber has been going on, and Canada has appeared to sell at least a portion of this material to the United States. My informant stated that the company interested in this trade were beginning to look about them for a means of direct exportation from Canada, as in many respects the present system was becoming unsatisfactory. The greatest difficulty he apprehended would be in finding return cargoes to Canadian ports.

This question of return cargoes was unexpectedly, though perhaps but partially, answered almost at once, when one of the largest manufacturers of woolen goods in the Dominion complained to me that the immense amount of wool the firm imported, much of it from South America, particularly the variety known as Chilian wool, came filtering into Canada from sources which added unduly to its cost. He was anxious to be placed in communication with shippers who would be likely to bring him his freights direct. A dealer in hides has asked me for the same assistance, and it seems easily within the realm of possibility that if Canadian exporters and importers having to do with South America got together, the situation would be simplified or solved, freights cheapened and our export and import lists straightened so as to show who are the customers of Canadian products, and of whom Canada is a customer. Such a movement would be a patriotic one and increase an hundredfold the opportunities for Canadian trade with South America.

## PERSONAL.

Mr. Eli Claude, for ten years bush foreman for Messrs. Buell & Hurdman, of Hull, died in Ottawa recently.

Mr. J. A. Christie, of the Assiniboine Lumber Co., Brandon, Man., was a recent visitor to Ottawa and other eastern points.

Mr. T. R. Case, an extensive lumber operator of Little Rapids, Minnesota, was recently in Ottawa on government business.

The marriage is announced of Mr. Donald Fraser, jr., of the well-known lumber firm of Donald Fraser & Sons, Fredericton, N.B., and Miss Tenant.

Mr. Andrew McCormick, the veteran lumberman of Ottawa, Ont., returned a fortnight ago from an extended visit to Bermuda, where he went to improve his health.

The death occurred at Ottawa recently of Mr. A. M. Burgess, Commissioner of Crown Lands for the Dominion and ex-Deputy Minister of Interior. He was 48 years of age.

Mr. John Donogh, of the Swan-Donogh Lumber Co., North Tonawanda, N.Y., was recently indisposed through illness at the residence of a friend in Toronto. A fortnight ago he was sufficiently recovered to return home.

From Pembroke, Ont., comes the news of the death of Mr. Hugh Grant, for many years manager for Hamilton Bros., and latterly of the Hawkesbury Lumber Co.'s business at Rowanton, Que. Deceased was in his 69th year, and was well known to the lumbering community.

The wholesale lumber firm of D. L. White & Co., of Albany, N.Y., has secured the services of Mr. Guy Buell, of Ottawa, who for the past two years has been connected with the firm of R. H. Klock & Co. In his new field Mr. Buell will have full charge of the Ottawa and Michigan business of D. L. White & Co.

Mr. Frank Maundrell, of the lumber firm of Leishman, Maundrell & Co., Woodstock, Ont., has returned from a business trip to Great Britain. Mr. Maundrell opened a branch agency of his firm in Glasgow, and expects to secure considerable foreign business. He also succeeded in selling the English rights to manufacture an acetylene generator of which he is the patentee.

We are pleased to learn that Mr. Carl Zeidler, of Toronto, has secured the appointment of European agent for Messrs. Geo. T. Houston & Co., of Chicago, the well-known exporters of hardwood lumber. Mr. Zeidler expects to leave some time this month for the European continent, visiting the markets of France, Germany and England, and will no doubt return with many orders as the fruits of his trip. Messrs. Houston & Co. make a specialty of quarter-cut oak, and also handle many hardwoods which are not found in Canada, such as gumwood, cottonwood, cypress, hickory and satinwood.

Remember the lumbermen's meeting in Toronto, April 7th. The hardwood trade should be well represented.

## IMMENSE LUMBER CONSUMPTION OF A CANADIAN ESTABLISHMENT.

We give herewith a view taken in the lumber yards of the Massey-Harris Company, Limited, Toronto, and also introduce a portrait of their lumber buyer, Mr. Alex. McKee.

The Massey-Harris Company are among the largest buyers, and are, we believe, the largest consumers of hardwood lumber in Canada, their annual consumption being between 7,000,000 and 8,000,000 feet. Notwithstanding the fact that in the manufacture of agricultural implements steel is largely superseding wood, yet the growth of the business of this company is so large that their consumption of hardwood lumber is increasing year by year. The average value of the lumber which they generally carry in stock is nearly $250,000. When one considers the enormous amount of money which is circulated by this one company alone among the mill men of western and northern Canada, and the large number of persons that find employment directly and indirectly in these mills, some idea of the importance of this industry to Canada can be conceived.

It is a great source of satisfaction to know that such enormous quantities of hardwood lumber are used in the Dominion of Canada, giving employment not only to the saw mills of the country, but to a large number of artisans who construct, from this raw material, various kinds of implements, which are exported over the entire world.

The principal object of this article is to draw the attention of saw mill men throughout the country to the fact that they can find in the company we have mentioned a purchaser for very large quantities of hardwood lumber, either dry or green, and we are satisfied that it would be to the advantage of the mill men of Canada to sell their product to local companies whenever possible, rather than to export it to be manufactured abroad.

Corner in Lumber Yard, Massey-Harris Company, Toronto.

The hardwood lumbers mostly used by the company are white ash, white and red oak, rock elm and hickory. They also use considerable quantities of maple, basswood, soft elm and whitewood. White ash pole stock 3½″ × 4¼″ and 8″ or 12″ × 14 feet is very valuable to them, as is also 1½″ × 10″ × 12 feet white or red oak or rock elm, which is used for binder wheel rims. For such lumbers the Massey-Harris Company inform us they will pay more than mill men or dealers can obtain by exporting.

For packing cases, for which they use 1″ soft elm, they consume one to two million feet annually. They buy this mill run (dead culls out), thus taking the entire cut, which is of great advantage to the mill man. For many special sizes they pay an extra price.

Mr. Alex. McKee.

Their buyer, Mr. McKee, is well-known to nearly every mill man in western Ontario. He has been lumber buyer and inspector for the Massey-Harris Company and the old Massey Manufacturing Company for over 20 years, and is perhaps the best posted man in Canada on hardwood lumber. He knows the value of every board in connection with the business, and is able on this account to make an inspection more favorable to the mill man than the ordinary one.

## EVOLUTION OF THE WATER WHEEL.

The essential principles of a well constructed water wheel are not unlike those of a finely balanced and adjusted automatic cut-off steam engine. In either device the first consideration is a point of impact of the power with some vehicle through which the power is conveyed directly to the machines to be driven. In the steam engine this point of impact is the piston head, and the power is the steam admitted to it through the cylinder. In the water wheel the point of impact is the bucket, and the power is the weight of water conducted to it.

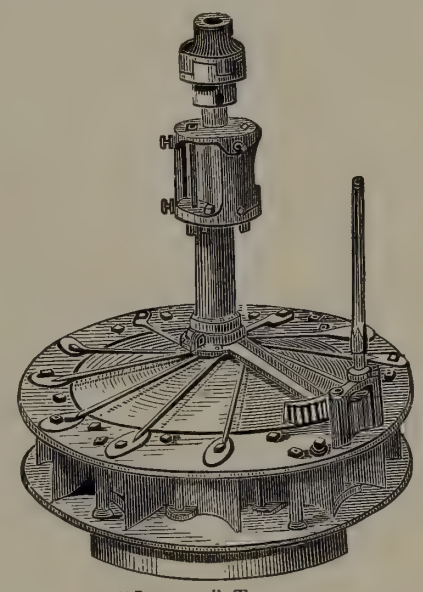
During the early stages of steam engine development the margin of profit in the use of steam over hand power was so enormous that little or no attention was given to economy of fuel; but with the expansion of competition which this large margin naturally invited, the minutest detail of cost of production came to be closely scanned, and to-day the quantity of fuel consumed in any well ordered manufacturing establishment is as accurately noted as any other material that enters into the factory product, and vast sums are cheerfully paid for plants that secure the closest proportion between a certain weight of coal burned and each pound of water evaporated.

Such scaling down in the cost of steam power for a time left vast water powers throughout the land comparatively unused and apparently useless; for manufacturing could be pursued at any point, and in fact was diverted from localities possessing superior natural advantages to those that offered the best facilities for the distribution of finished goods.

Electricity, however, the great annihilation of distance, has, with wondrous strides, taken the front rank of the march of progress, and with the harnessing of Niagara the age of steam may almost be said to have yielded to the electric age, while in its wake, if not at its side, nature's other great elementary force—water—unassumingly stands forth the basic power of the day; the time-honored overshot and breast water wheels which served their generation modestly but well, but for which the world became too small, are venerable relics of the past, along with Watt's steam engine and Stephenson's locomotive; and to the turbine has been assigned its final worthy place in the economy of the world.

Some will say, then, is not one turbine as good as another? Not so, any more than that one engine, of whatever type, using steam, is as good as another. There are few really bad turbines, for they all possess at least one-half the generic virtues of their species—they will let the water into them. But just as the highest type of steam engine is that which exhibits the nicest adjustment between the inlet of steam and the cut-off to the exhaust, so the highest type of turbine water wheel is that which observes the finest balance between the volume of water conveyed to it and its capacity to discharge or exhaust the same water while utilizing, by reason of its correct principles of construction, the greatest possible percentage of the power due the water.

The process up to this happy medium is, or should be, one of elimination or the dispensing with every part and weight that makes for friction, and that tends to the misdirection or mis-use of the power contained in the water. Such results are not a matter of lucky guessing or of random efforts by new men in a new field. In the case of the "Leffel," "Vulcan," and "Perfection" turbines the manufacturer, Mr. Madison Williams, successor to Paxton, Tate & Co., Port Perry, Ont., states that they represent thirty years of patient trial, experiment, modifications, and a steady aim to run parallel with natural laws, so that while many builders have multiplied devices, parts, connections, and cumbered their wheels with useless and hindering appliances, these turbines stand out as models of simple design, devisable workmanship, and high efficiency of power, that make them prototype of the most modern self-contained automatic steam engine, having the advantage over the latter that they use no fuel, require no fireman or engineer, and once properly placed may be relied on to do their work day in and out for years after, so long as the stream flows.



"Leffel" Turbine.

These turbines are built in sizes from 6⅝ inches to 8 feet in diameter, and may be made to yield anything from ¼ horse power to 2,500 horse power or over for a single wheel. Five sizes from 6⅝″ to 11½″ are constructed entirely of brass, and those from 13¼ to 20 inches have brass gates. Sizes larger than 20 inches are all of iron.

In illustration of the almost marvellous ingenuity of these wheels, a recent requirement was for one to develop 60 horse power under a certain fall of water. The requirement was more than met by a wheel 7⅝ inches diameter, which was capable of 90 horse power, and as the same principles apply to all the wheels built at the works of Madison Williams, it would seem that there remains little, if anything, to be attained in the improvement of water wheels that is not embodied in the three types already referred to.

## THE SAW MILL OF THE FUTURE.

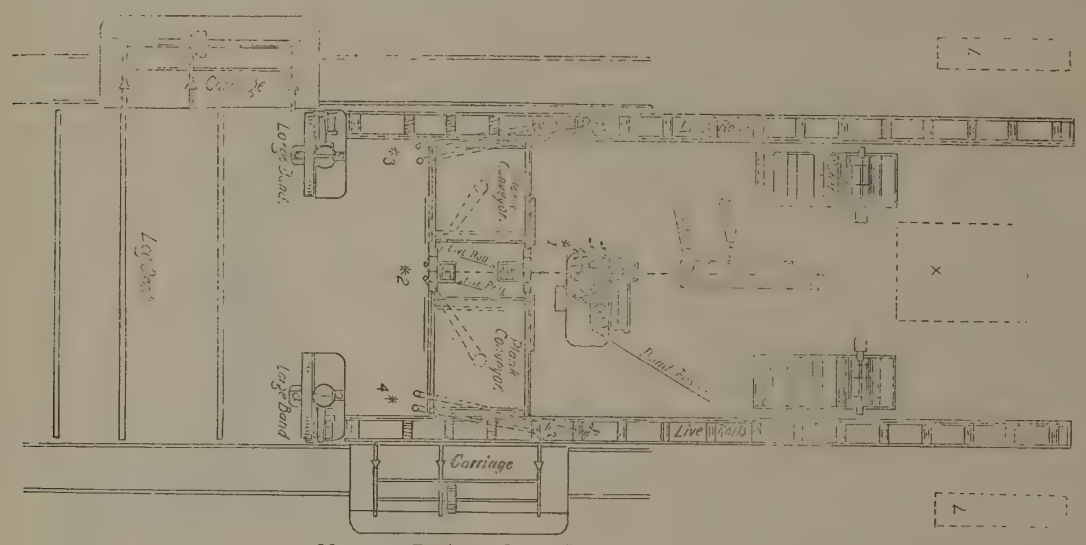
I have recently travelled in different timber districts in the United States, Canada and Europe, and owing to my business, as well as my mechanical tastes, have had my attention called to the different methods of saw milling pursued in these different countries and under different conditions. As was to be expected, where the timber is most valuable, the thinnest saws are found in use. In the old countries of Europe their methods of sawing are very slow, and to the American they seem very far behind the times; in fact, their saw mill machinery would not be tolerated for an instant in a saw mill on this side of the water.

But as our timber is becoming scarcer and the better grades are becoming more valuable all the time, our progressive mill men are looking about for better saw mill equipment, and the American saw mill of the future will have to meet the demand for that economy which is practiced in Europe, without sacrificing to too great an extent the present capacity.

There can be no doubt that the band saw is the tool to which we must look, and thinner saw blades must be employed than those in common use at present. Advance in this, as in every other line of progress, has not taken place steadily, but after an advance there has been a backward step. Thus the first band saw blades used were much thinner than those used at present. They were not entirely satisfactory, mainly for the reason that the operator did not know how to care for them. If a saw blade refuses to perform the work in the best possible manner, there are always two ways to remedy it, one to abandon the thin saw blade and use a thicker one—and this, I regret to say, has been the usual practice and accounts for the thick band saw blades we are now using. The other and the correct method is to fit the saw blade more carefully, to study the reasons which have caused it to do imperfect work, and to correct these defects. We are now commencing to do this, and the writer confidently predicts that within five years, in place of 14-gage band saws being the standard thickness, you will find saws 16-gage and thinner will be the rule.

I believe that the ideal mill of the future will use saw blades 17-gage in thickness. The advantages they will possess are numerous; they will be more flexible. This means a band mill with wheels of comparatively small diameter, and will admit of a much lighter, more compact, and hence more portable mill. Our valuable timber in many states, like Tennessee and Kentucky, is located in a hilly country, and the logs can not be transported to the large river mills. The saw mill of the future must go to the logs, and not the logs to the mill. There will be no disadvantage in the way of capacity in this respect. To begin with, we, none of us, know the maximum capacity of a band saw blade.

I was recently in a saw mill in northern Wisconsin. This mill was sawing logs averaging 18 or 20 inches through. I noted carefully with my watch the length of time elapsing from the time the saw entered a 16-foot log until it emerged from the other end. Often no more than two and one-half seconds were required, and never more than three seconds. Of course this was a 14-gage, 11-inch saw, but thin saws are doing even more than this in proportion. A firm in Illinois recently sawed, on a band resaw, carrying 19-gage saws, 39,960 feet of 1 × 12 cottonwood in nine hours. The saw blades were, most of them, old and narrow, and thus their average width was not over four inches, probably less. This firm takes special pride in the small saw kerf removed, hence this day's work means much more than if they were making this capacity at the expense of the quality of the sawing. This, of course, was a continuous feed, and there was no lost time as would be the case in sawing logs in a saw mill; but allowing two-thirds lost time for reversing the carriage and loading and turning of logs, you still have about 15,000 surface feet, which could be sawed by a log mill with a 19-gage 4-inch saw if it were fitted and cared for as well as these blades were.



Modern Double Band Mill, with Resaw.

The small band mill which will be used in the future will have 60 to 70 per cent. of the capacity of the present large band mill; 1-16 inch in saw kerf will be saved as compared with the present 14-gage saws. In the large plants of the future, where the capacity must be maintained, band resaws will be used for this purpose. They will be placed directly back of the log saw, which converts logs into flitches, and the band resaw will convert this latter into boards or planks of the required thickness. This feature is not experimental. They are being used extensively for this purpose at the present time. One firm alone has sold over thirty to saw mill owners during the past two years.

The accompanying diagram represents a double band mill, which, equipped with 18-gage saws, will produce 75,000 to 80,000 feet of four-quarter pine in a day of ten hours. It will remove a saw kerf of 5-64 inch. This capacity, at first glance, would seem impossible, but when it is remembered that the present band mill carrying 14-gage saws will saw 40,000 feet of inch boards per day of ten hours, unquestionably the same number of logs could be handled with a thinner saw blade if only one-half of the cuts were made. In the proposed mill this will be done, the band resaw making each alternate cut.

The saw mill band resaw has many novel features in the way of set works, devices for sawing slabs, changing thickness, self-centering automatically, becoming rigid for slabbing, etc., as occasion may require. In the mill of the future all of these advantages will be insisted upon, and, moreover, in order to make all the saving which results from using so thin a saw kerf, a better class of set works will have to be used. There are a number of friction set works in existence at present, which are, undoubtedly, the outgrowth of this latest demand. In short, the future of the thin saw blade is brighter at present than ever before. It seems to meet every requirement, and the writer is never surprised at any new record that is made for either accuracy or capacity.—E. C. Mershon, in the Wood-Worker.

## TRADE NOTES.

Senator Poirer, of Shediac, N. B., has purchased from the Robb Engineering Company, of Amherst, N.S., a 60 h.p. engine and boiler for his saw mill.

D. K. McLaren, 24 Victoria Square, Montreal, informs us that their western branch is open in the Imperial Block, Galt, where a full stock of belting, card clothing and mill supplies is on hand.

J. L. Goodhue & Co., of Danville, Que., are completing several large belts for a new saw mill on the Pacific coast, consisting of one 48 feet double, two 20 feet double, two 18 feet double, and the smaller belts required. They also have on hand a large order for an Ottawa concern.

The Canadian Locomotive & Engine Co., Kingston, Ont., advise us that they have shipped a carload of shingle machinery to McLaurin & McLaren, East Templeton, Que., and a carload to Gillies Bros. Co., Braeside, Ont., this month, besides several smaller orders, and business in this line is improving.

R. Bell, jr., of the Hensall machine shop, recently shipped the following orders: One large double saw mill, top saws, log jackers and overhead centre, to Arrowhead, B.C.; heavy saw mills to Arnprior and Hagarsville, Ont.; medium saw mills to Orillia, Tweed and Toronto; engine and boiler to Dashwood, and wood-working machinery to Toronto.

Mr. Madison Williams, successor to Paxton, Tate & Co., Port Perry, Ont., has recently shipped and has under construction the following: 10-inch brass horizontal mining wheel, with Globe case, to British Columbia; 23-inch Vulcan to D. McInnes, Judique, N.S.; 26½-inch Vulcan and case to Thos. Elliot, Hamilton, Ont.; one 40-inch and one 48-inch Leffel to St. Hyacinthe, Que.; one 44-inch Leffel to E. H. Bartlett, Bartlett's Mills, N. B.; set of heavy gearing to Hon. J. B. Snowball, Chatham, N.B.; 20 ft. Lane saw mill and carriage, with special rope feed-works, to S. G. Parkin, Lindsay, Ont.

Messrs. Baldwin, Tuthill & Bolton, of Grand Rapids, Mich., report the following recent sales of band or gang saw filing room outfits: Mitchell & Rowland Lumber Co., Toledo; Union Dry Dock Co., Buffalo; Raine & Raine, Empire, Pa.; W. A. Jones & Co., Caledonia, Pa.; Clark-Rowson Lumber Co., Grand Rapids, Mich.; Kalamazoo Sled Co., Kalamazoo, Mich.; Saginaw Mfg. Co., Saginaw, Mich.; Montgomery Bros. Lumber Co., Buffalo, N.Y.; Woodward Lumber Co., Atlanta, Ga.; Hubbard Bros., Mobile, Ala.; Jos. F. Paul & Co., Boston, Mass.; H. A. Hodges, Buffalo Bluff, Fla., together with single machines or partial outfits to over 60 other concerns throughout the United States and Canada. They are having a remarkable demand for their 1898 book on saw fitting from both millmen and filers.

## EXTENSIVE MARKET FOR SPRUCE.

The fact has been previously referred to in this journal that larger quantities of spruce than heretofore have this year been sold for shipment to the east coast of England, which is practically a new market for this lumber. The price of Baltic lumber, which formerly supplied the enormous ship-building and other industries of the east coast, is now so high that buyers are looking around for a suitable substitute at a lower price, and are turning their attention to the spruce lumber of New Brunswick and Nova Scotia.

For the purpose of investigating the prospects of obtaining a continuous supply of spruce, Mr. James Miller, representing Robson, Miller & Co., timber importers, of Newcastle-on-Tyne, recently paid a visit to Canada. To a representative of the St. John Sun, Mr. Miller gave some interesting particulars of the situation. He said :

"The spruce ports are now on their trial. The consumption of lumber on the east coast of England is enormous. Hitherto the supply of whitewood has come from the Baltic. The mills there are more careful in manufacturing lumber and make it in sizes to suit the trade. The objection to spruce has always been that your mills do not make as good a class of lumber, or make sizes to suit. But the increase in the price of Baltic lumber has turned attention to spruce. What your manufacturers must do is to turn out well sawn lumber in the sizes needed—and nearly all sizes are required. I have talked with some of your mill owners. They say they have been accustomed to cutting 3 x 7, 3 x 9 and 3 x 11 in. deals, and driving their mills. In my opinion, if they would cut more slowly and get more out of the logs it would be better for them and for the lumber interests of your province. It would certainly give them a better chance to secure and hold the east coast market. The gang saws that I have seen in your mills are about or nearly twice as thick as those used in the Baltic mills. When one of your mill owners told me what logs cost, I was very much surprised that so much of the logs should be wasted by the use of thick saws.

"In order to get and hold a market, in these days of quick and world-wide communication, the wants of the market must be studied and suited. The Baltic people have been careful to do that. Your people now have the chance. I believe that four or five thousand standards of spruce have already been booked for the Tyne alone. Remember, spruce is, comparatively speaking, unknown on the east coast. It must make its way, and careful manufacture of all lumber sent there is the only means of cultivating the market. The people here have it in their own hands.

"There is an immense variety of sizes suitable to the market, ranging from 4 x ¾ inch boards to 12 x 4 inch planks. Such sizes as 4 x 2, 5 x 2, 5 x 2½, 6 x 1, 7 x 1, and 2½ and 3 inch thicknesses in various sizes are required. There is a very large demand for 2½ inch stuff.

"This (2½ inch) is the size used by shipbuilders, and the ship-building industry is extremely active. All the companies and firms are filled up with orders for the year for steamers, while in the yards building warships there is three years' work booked. Though built of iron and steel, there is a great deal of lumber used in ceiling and the internal fittings of vessels. In this work 11 x 2½ inch stuff is used, and that is a size seldom asked for on the west coast. You must remember, and manufacturers must remember, that different markets want different sizes. What suits the west coast will not suit the east. What suits the east will not suit the south coast. The sizes used in house-building on the south coast, for example, are not the same as ours on the east coast. A market will not take any size you choose to cut. You must cut the size it needs.

"The activity in ship-building has caused a corresponding activity in house building, and this creates a further demand for lumber. The price of Baltic lumber is likely to remain high, owing to the enhanced value of the forests. Our firm import lumber from the Baltic, white pine from Quebec, pitch pine from the south, and also import from Vancouver. We do not see why New Brunswick and Nova Scotia should not have a share in the trade of the east coast. It rests with the manufacturers.

"There are ports on the Tyne, Wear, Blyth, Tees and Humber, and interior markets like Leeds, Bradford, Huddersfield and others, having an enormous consumption of lumber. Such cities as Newcastle, Shields, the Hartlepools, Sunderland, Stockton, Middlesboro, Hull, Grimsby and others afford a large market."

## NOTES FROM THE MARITIME RROVINCES.

[Correspondence of the Canada Lumberman.]

Logging operations in New Brunswick and Nova Scotia the past winter have been done on a much smaller scale than for a number of years, owing to the drop in prices in all markets where spruce lumber obtains, and the consequence is being severely felt in all lines of trade. The quantity of sawn lumber piled on the wharves and at the mills ready for shipment is much greater than usual at this season of the year. Some few mills have small stocks of logs carried over, which, with the small cut of new logs, will give ample stocks to supply the demand.

At present it is impossible to get a quotation for English deals, and it is reported that there have been no vessels chartered for Bay of Fundy ports for same. There will be a few cargoes for French and Mediterranean ports shipped from mills at Apple River, Point Wolfe and Alma, early in the season, by C. T. White and the Alma Lumber Co. The price delivered is fixed, but vessels are not yet chartered, so it is not known yet what the net price will be.

In new Brunswick the cut is estimated to be about one-half the average quantity; a number of the large operators say they would not have cut a tree but for the fact that they had a lot of families depending on them for work, and even then they were not anxious that the workmen should over-exert themselves, as from the outlook the trees would be more valuable growing than in the pond. A few of the St. John river lumbermen, such as Hale & Murchie, Donald Fraser & Sons and R. A. Estey, Fredericton, who log on Tobique, James Murchie & Sons, Edmundston, and A. Gibson, Marysville and Blackville, will get out about their usual quantities, as also will Hon. J. B. Snowball, of Chatham. The latter is making extensive alterations and improvements in his mill, which I intend giving you a full description of when completed. William Richards, Chatham, is also improving his mill, putting in the patent haul-up and making other changes in the line of economy in handling the product of his mill. E. Hutchinson, Douglastown, is also putting in the patent haul-up, and making some changes deemed necessary for economical working when the margin of profit on lumber is as small as it is at the present time.

Adams, Burns & Co. and Sumner & Co., Bathurst, will operate on a much smaller scale than last year—just enough to keep the machinery bright.

O. F. Stacey & Co., shingle mills, Bathurst, will operate about as usual. Mr. Stacey is in California at present for his health, and while there and in Vancouver will look into the shingle business and compare methods of manufacture there with those of New Brunswick.

Gray & Lawrence Bros., Charlo, N. B., are getting their usual stock of cedar for the season. This property is for sale, and several parties have looked it over with a view of purchasing. The firm have large lumber interests in Gardner, Maine, hence the reason for selling.

Kilgour Shives, Campbellton, one of the largest shingle and lumber manufacturers in New Brunswick, took occasion to visit the English and Continental markets during the winter and make himself acquainted with the wants of the different markets in the classes of goods he manufactures, and I will venture the assertion that if there is an opening for the lines he makes or can make, and in which there is a margin of profit, he will find it and supply the goods.

The shingle market in the United States is very low, which, with the re-imposition of the duty, reflects the want of animation in the business in Campbellton, and in fact all New Brunswick and lower Quebec where this is the staple business. The mill owners are going on with their work in the hope that the near future will open up bright. Hope, like capital, is a grand thing to have, and I think lumbermen possess it to an extraordinary degree.

The early part of the winter was good for logging operations all through New Brunswick and Nova Scotia. Some heavy falls of snow in February in the northern part resulted in about seven feet—while two and a half would be the quantity in Nova Scotia. One who has never seen seven feet of snow on the level in the woods can form but a very poor idea of what the New Brunswick and Quebec lumbermen have to contend with in this respect.

The cut of lumber in Cumberland County, N. S., is very much under the average of the past ten years, in fact some of the mill owners are seriously thinking of holding over their logs unless there is an advance in price; they claim that with the cost of sawing, piling up, insuring, interest, etc., and holding for a price, it would not be as good as to leave the logs in the pond.

Prescott, Gillespie & Co., Shulie, N. S., started in to get one and a half million, but are afraid they will have two and a half.

C. I. White & Son, Sand River, N.S., are large handlers of piling, which they buy anywhere on the shores of the Bay of Fundy, and ship to New York, Baltimore, Philadelphia and other American markets. Timber not suitable for piling is sent to their saw mill to be sawn into deals.

C. T. White, Apple River, N. S., is operating—getting about four million feet for his gang mill. He has a portable mill sawing hardwood and some spruce; he will get about a million feet, six hundred thousand of which is hardwood. Mr. White also owns a good lumber property at Point Wolfe, in New Brunswick, where he will get about five million feet.

A. C. & C. W. Elderkin, Advocate, N.S., purchased the lumber property, mill, and all logs, lumber and supplies from C. F. & F. R. Eaton, Eatonville, in December last. They have about three million feet ready to drive when water comes. They also have a large steam portable mill at Advocate, in which they will saw one and a half million.

Moses Hatfield, Port Greville, has a water power circular mill in which he will saw during the spring eight hundred thousand, and in a steam portable mill at Fraserville will saw about as much more.

Girvin Elderkin has a portable steam mill which he will start in a few days sawing for H. Elderkin & Co., at Port Greville, N. S. The mill is about five miles from shipping point, and the deals are run down in a water sluice at very little expense.

At Parrsboro, where there was a very large export of lumber last year, and charters for thirty million feet made by the 1st of March, 1897, there is said to be now not one vessel chartered. Of course there will be considerable lumber go out from here, but at present lumber is quiet.

Pugsley Bros. mills at Five Islands and River Hebert have five million feet. Huntley & Fpps have one million feet. Newville Lumber Co., Newville, got out three million feet, with one and a half over from last year.

W. J. P.

The construction of the Manitoulin and North Shore Railway will join Manitoulin Island with the mainland. The island is richly timbered, and contains large quantities of pulp-wood, which will no doubt be utilized as soon as railway facilities are secured. There are many good water powers on the island.

"Use and Care of Band Resaws" is the title of a creditable hand-book published by W. B. Mershon & Co., of Saginaw, Mich. This is the third edition, and its preparation was rendered necessary earlier than was expected owing to the great demand for the second edition. The compilers claim that it represents a line of machines excelling anything so far attempted in band resawing machinery. The Standard, Perfect, Saginaw and Ideal resaws, special band edgers, and many other types of machines are nicely illustrated and described. As a treatise on the use and care of band resaw blades it should be of value to filers and mill superintendents.

A Canadian engineer has evolved a theory that forest fires are often started by the friction of trees rubbing against one another. He claims to have discovered an instance of that kind. While with a government surveying party in the far northwest, where forest fires are frequent, he happened to catch a tree in the very act of setting fire to itself and its companion trees. It had been partly uprooted by a windstorm, and leaned against the trees near, some of which were dead. Gusts of wind from the mountains caused the inclined tree to rub those against which it rested. This developed much friction, and after several hours the dead wood on which this friction was exerted began to glow, and at length burst into flame, and a fire which swept through miles of valuable timber was the result.

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## THE FORESTS OF ONTARIO.

IT would be difficult to over-estimate the importance to the province of the preliminary report presented to the Lieutenant-Governor of Ontario by the Royal Commission appointed to investigate and report on the subject of restoring and preserving the growth of white pine and other timber trees upon lands in the province which are not adapted for agricultural purposes or for settlement. This report, published in our February number, is by no means exhaustive, neither does it deal with many of the problems of forestry, but it certainly casts an entirely new light, to many, on what we are to do with our cut-over and burnt-over pine lands.

The common idea held by lumbermen and others has been that a pine forest, once cut down and the ground burnt over, would not again re-clothe itself with pine timber. This has now been shown to be a mistaken idea, and that under certain conditions pine will again become the dominant wood of the district. If a forest fire is so fierce—as sometimes happens—as to kill every tree in the district, then only those trees will appear as second growth whose seed can be carried in quantities and long distances, such as poplar and ash; but if, on the other hand, some of the large pine trees escape and are left standing, if only a tree here and there, then the seed from such pine trees will so disseminate itself as to produce—slowly it may be, if the parent trees are scarce—another crop of young pine trees, who find the necessary conditions of their growth as forest trees by coming up amongst the young poplars. It has not yet been determined how far a pine seed will carry; the wing or tail attached to each seed, measuring about three-quarters of an inch long by one-quarter of an inch wide, will no doubt fly a considerable distance or strike the ground near at hand, according to circumstances. The cone opens late in the fall, and as it gradually opens, the seed will usually become detached during a gale of wind, and so from its altitude be carried a considerable distance away.

Some districts visited by the Commissioners are thus described: "In most of the burnt-over territory examined, pine was found intermixed with other trees, and gradually—as was no doubt the case with the original forest—asserting its supremacy and dominating the surrounding trees of the young generation." A specific case is given of a typical young forest in the county of Peterborough, twenty-three years of age, the exact date being verified by the postmaster of the district. "Viewed from the Burleigh road it has the appearance of a thrifty young poplar forest, with a few pine trees appearing on a level with the poplar; on close examination it was found that the young forest was largely composed of white and red pine, poplar, white birch, balsam, spruce, with some cedar, black ash and spruce on the low lands, as well as odd pine trees here and there that had been left by the lumbermen, relics of the original forest that had survived the fires."

The rate of growth of pine timber has been variously estimated, and is, of course, subject to many conditions. A young tree may begin life in the forest under adverse circumstances, germinating later than its near neighbors, and so grow up under their shade; while still young it may make fair growth, but as the forest space surrounding it is gradually taken up by the older trees, shutting it out from the sunshine, the struggle for existence can only end one way—by the gradual stoppage of growth and final death of the less favored specimen.

Leaving out of account, however, trees of this description, and taking only those living under fair and normal conditions in our northern country, it takes, according to the average made by the Commissioners, about forty years for a young pine to reach any commercial value; at that age it will make an eight inch log sixteen feet long, or say sixteen feet board measure. How important it is to preserve this sapling will be seen by considering its growth during the next thirty years, when, according to the apparently moderate calculations made, and by actual tests taken, it will, at the age of seventy years, produce 164 feet of merchantable lumber, and thereafter increase in growth at the rate of 3½ per cent. per annum.

All the recommendations made by the report can be carried out by order-in-Council except clause 5, which required the sanction of Parliament, and that was given at the last session by the enactment of Bill No. 54, "An Act to Establish Forest Reserves," which, being entirely away from the strife of parties, attracted little notice, but which we consider the most important act which has passed the Legislature for many years. Taken in connection with the recommendations that no pine tree should be cut smaller than 12 inches diameter measured two feet from the ground, that the system of fire-ranging should be compulsory on all lumbermen, and adopted by the government for their unsold berths, the system, if carried out, would introduce a new era in forestry, which would show its effects in after years.

The necessity of adopting a policy of forest reserves has long been admitted by those who have given the conditions prevailing in our north country any consideration. There are many millions of acres quite unfit for settlement that are admirably adapted for growing coniferous trees, and it would seem the height of absurdity to allow settlers to enter an area unfit for permanent cultivation, and where their presence leads to the destruction of valuable timber, as may be seen in many sections of the province.

There is a little over 20,000 square miles of territory now under license in this province, and presumably there is as much more to be sold, although not all pine lands; and of this vast area a considerable proportion may be set apart for forest reserves, as it reverts back to the Crown when the present crop of timber has been taken off. It certainly looks as if no better investment could be made by the goverment looking forward to obtaining a permanent revenue for the province. As to those areas which have been so completely burnt over that valuable varieties will not immediately reproduce themselves, it is a question on which we require further information and more complete investigation. Meantime we welcome the report, with its valuable initial suggestions, and as an earnest of what may be accomplished by close and practical attention to the interesting subject of reforestry.

## TWO MAIN FACTORS IN TRADE.

IT is not always easy to determine just how far the price of a certain commodity may advance before the consumers thereof cast around for a suitable substitute. The relation between price and demand is one which should be carefully studied by lumber manufacturers, as upon it depends, to some extent, the volume of consumption. After guarding against an over-supply, perhaps the next thing to be carefully watched is that prices are not forced so high as to cause substitutes to be purchased; for it is vastly easier to hold a market after it is secured than to capture it for the first time. Shippers in foreign markets may continue to advance prices until, to their surprise, they find the demand weakening, and upon enquiry, learn that other woods have been substituted.

Two illustrations may be given, one showing the evil effects of over-production, and the other the necessity of maintaining prices within easy reach of probable consumers. It is well known to readers of this journal that the spruce production of 1897, especially in New Brunswick and Nova Scotia, greatly exceeded that of any previous year. The result was the overstocking of our principal market, Great Britain. Early in the

year the demand was very active, but as heavy shipments continued to arrive, the market weakened, and prices throughout the entire season showed a gradual decline. The difference between the opening prices and those realized in the late fall was about £1 10s. per standard. The depression would have been more severe had it not been for the active consumption, induced in a measure by the low price. Taking the year's business as a whole, profits of manufacturers on this side were perhaps no more than if the production had been curtailed by one-half. Thus we see the evil effects of an over-supply.

Turning to the influence of price upon consumption, we find that this same overproduction has assisted in opening the way into new markets. Heretofore the Canadian spruce trade has been confined almost exclusively to the west coast of England, the east coast obtaining its supply from the Baltic. Within the past two years, however, the price of Baltic lumber, owing to the increased value of the forests, has advanced in price, until to-day whitewood is quoted at more than two pounds higher than spruce. The result of this is that consumers are turning their attention to other woods, and have made large purchases of Maritime province spruce. There appears to be reason to believe that for many purposes it will entirely supersede whitewood, and that an immense market will be created by shipbuilding and other ndustries. Some estimate of the requirements of the east coast may be arrived at by taking the ports of Hull, Grimsby and East and West Hartlepool. Their combined import last year was 1,709,684 loads of 50 cubic feet. This is equal to over one billion feet board measure, which is only a small portion of what is imported by all the ports combined. It is not to be expected that Canadian spruce will supply more than a mere fraction of the total requirement, but the figures show the opportunity that exists for extending our trade.

The Baltic shippers will undoubtedly come down in their price in order, if possible, to hold the market, and our manufacturers will find it no easy task to capture the trade.

Two things should receive the careful consideration of Canadian producers: First, the overstocking of foreign markets should be guarded against; and, secondly, attention should be given to lessening the cost of production by using thin saws, utilizing the waste material, and by every other possible means. It is manifestly more advantageous, when competing in the markets of the world, to obtain from a given log 1,000 feet of marketable lumber which can be sold for, say, twenty dollars, than to lose 25 per cent. through waste or careless sawing and be compelled to ask the same price for the remaining 750 feet.

## FOREIGN TRADE IN LUMBER.

The abstract in this issue from the final report of Mr. E. E. Sheppard, trade commissioner to the South American Republics, further corroborates the statements reiterated in this journal that the lumber of Canada is little known in many foreign markets. It clearly points out that the policy of allowing our export trade to be handled by United States houses has been, and will continue to be, detrimental to our best interests, and until some means is devised of affording direct steamship communication we need not expect any great expansion of trade. Mr. Sheppard has evidently devoted considerable attention to the lumber trade, and has placed the government and Canadian lumbermen in the possession of facts and figures which should serve as a basis to work from. There appears to be a fair prospect of increasing our trade in lumber with Mexico, Central America and some countries of South America. The trade of Mexico is now held by the Southern States, while the Pacific markets of Central America know little of Canadian lumber. It is Mr. Sheppard's opinion that persistent efforts on the part of our mill-owners would capture much of this trade.

Of the South American countries, Argentina and Chile appear to offer great possibilities for our spruce and pine lumber. Spruce is shipped in large quantities from Maine, and could no doubt also be profitably exported from the Maritime provinces. One drawback with which shippers have to contend is in respect to the payment of duties, the valuation of the goods, instead of being taken as per invoice, being fixed by the authorities, according to their judgment. All goods of any specified class are assessed alike. It is a singular fact that, although Chile imported $800,000 worth of lumber in 1896, Canada is not credited with supplying any portion thereof. The methods of saw-milling in these countries are very crude, which suggests the thought that if Canadians would manufacture their lumber carefully and into proper sizes, they might in a short time build up a much larger trade.

## EDITORIAL NOTES.

The memorial recently presented to the Dominion government by western lumbermen, and which is printed in this number, presents strong arguments in favor of an import duty on lumber, and should dispel the erroneous idea which seems to prevail to some extent that the consumer of the Northwest will be compelled to pay a higher price for his lumber when United States competition is shut out. There are sufficient mills and timber in Canada to supply the requirements, and the competition between local concerns is sufficiently keen to keep prices within reasonable bounds. Every lumberman in the Dominion should exert himself to secure the exclusion of United States lumber until such time as the tariff of that country is more favorable to Canada.

Forest culture and forest preservation, although not identical, have as their purpose precisely the same object, namely, to provide present and future generations with a necessary supply of timber. In Canada, with her large tracts of timbered land yet unsold, and all lands reverting back to the crown after the timber is cut therefrom, there has been but little done in the way of forest culture, more especially as the government have taken steps in ample time to perpetuate our timber supply by establishing forest reserves and investigating the possibilities of a regrowth on cut-over lands. In the United States, where the timber supply is more nearly exhausted, forest culture has become more necessary. The suggestion of Governor Black, of New York, should therefore meet with favor. He proposes that a bill should be passed by the State Legislature authorizing the lease to Cornell University for twenty-five years of 25,000 acres of State lands for experimental purposes in the cultivation of timber, an annual appropriation to be granted for the purpose. In this way the University would be in a position to proceed with forest culture along the same lines as practised in some of the older countries of Europe, and the practicability of the scheme would soon be demonstrated, and copied on a larger scale.

## LUMBERMAN'S ASSOCIATION OF ONTARIO.

For the purpose of reorganizing the Lumberman's Association of Ontario, which had not held a meeting for eight years, members of the trade assembled in the rotunda of the Board of Trade on Tuesday, March 22nd. The members of the association present were: A. H. Campbell, sr., president; J. B. Miller, secretary-treasurer; James Scott, John Waldie, A. H. Campbell, jr., Toronto; C. Beck, Penetanguishene; T. Conlon, Little Current; W. A. Charlton, M.P.P., Lynedoch. Others present who identified themselves with the association were: C. D. Warren, Imperial Lumber Co.; John Bertram, Collins Inlet Lumber Co.; Allan Macpherson, Longford Mills; R. Laidlaw and W. J. Smith, Toronto; R. Cook, South River.

The president, Mr. Campbell, took the chair, and called upon the secretary to read the constitution. After some discussion a committee was appointed to revise the constitution, those named being Messrs. John Waldie, J. B. Miller, R. Laidlaw, John Bertram and C. D. Warren.

The report of the treasurer was presented. It showed a membership of about fifty, and a surplus in the treasury of over $300.

A committee was appointed to take steps to secure the imposition of an import on lumber, and to meet a deputation of western lumbermen the following day.

It was resolved to adjourn until 10:30 a.m. on Thursday, April 7th, 1898, when the committee on the revision of the constitution will present its report.

At this meeting many important questions will likely be considered, among them being the formation of a hardwood section and the possibility of securing cheaper freight rates to the Northwest. An advertisement elsewhere extends an invitation to all lumbermen desirous of identifying themselves with the association to be present, and we hope to see new life infused into the organization. For the information of our readers, we give below the original membership of the association:

M. M. Boyd and W. T. C. Boyd, Bobcaygeon; John Macdonald, Albany, N. Y.; Jas. Scott, Waubaushene; John Charlton and W. A. Charlton, Lynedoch; James M. Irwin, Peterboro'; N. Dyment, M. Burton, J. L. Burton and C. H. Clark, Barrie; Robert Thomson, Hamilton; David Gilmour and Allan Gilmour, Trenton; Alex. Fraser, Westmeath; C. McLachlin, Arnprior; T. Murray, Pembroke; J. B. Miller, Parry Sound; J. M. Dollar, Midland; C. Beck, Penetanguishene; W. C. Caldwell, Lanark; Alex. McArthur, East Saginaw; A. M. Dodge, New York; H. Malone (The Calvin Company), Garden Island; R C. Strickland, Lakefield; Thos. Conlon, Thorold; D. L. White, jr., Midland; W. C. Edwards, Rockland; Jas. McLaren, E. H. Bronson, E. B. Eddy, E. D. Moore, C. B. Powell, J. R. Booth, G. H. Perley, W. R. Thistle, W. H. Rowley, Ottawa; A. H. Campbell, J. L. Hatton, H. H. Cook, A. H. Campbell, jr., J. H. M. Campbell, John Waldie, W. W. Belding, Toronto.

## MEMORIAL FOR AN IMPORT DUTY ON LUMBER.

THE lumbermen of Canada have taken vigorous action to secure the imposition of an import duty on lumber coming into this country from the United States, and apparently do not intend to relax their efforts until the desired end is accomplished. In December last, it will be remembered, the British Columbia lumbermen passed a strong resolution, for presentation to the Dominion parliament, favoring such a measure, and since that time the movement has been gradually spreading and growing in interest.

On Thursday, March 17th, a deputation of lumbermen from the Georgian Bay district waited upon the Premier and Sir Louis Davies, Minister of Marine and Fisheries. The representation included Messrs. John Waldie, Victoria Harbor Lumber Co.; John Bertram, Collins Inlet Lumber Co.; E. W. Rathbun, Deseronto; John Charlton, M.P.; C. Beck, Penetanguishene; H. Lovering, Coldwater; and James Playfair, Midland.

The purpose of the deputation was to present to the government a resolution passed at a meeting of lumbermen held in Toronto on August 19th, 1897, requesting the imposition of an import duty on lumber. It was pointed out that, as the Congress of the United States had prevented Canadian lumber from reaching the American market by the imposition of a duty of $2 per thousand feet, the government of Canada should impose a similar duty on American lumber, which now comes in free, until such time as the American duty on Canadian lumber is removed and free trade in lumber restored. It was further stated that yellow pine from Georgia comes into Quebec and Ontario very extensively, and that red pine also from the States is shipped in at a low rate, because of the displacement of red pine by hemlock in the American market. The Premier, in reply, said that the great difficulty was with the lumber supply of Manitoba and the Northwest. He would, however, give the whole question careful consideration.

A few days later a deputation of western lumbermen, comprising Messrs. Walter Ross and D. C. Cameron, Rat Portage; Geo. Graham, Port Arthur; J. A. Christie, Brandon, Man., and F. Gordon, of the British Columbia Mills, Timber and Trading Company, Vancouver, B.C., presented a similar request to members of the Dominion Cabinet. The situation was fully explained in the following memorial:

OTTAWA, March 21, 1898.

Right Hon. Sir Wilfrid Laurier, G.C.M.G., Premier, Ottawa:

SIR,—The lumber trade of Canada, suffering as it now is from unfriendly legislation by the neighboring republic, is in an entirely opposite position from what it was when the lumbermen of north-western Ontario and Manitoba had the pleasure of appearing before the tariff commission at Winnipeg. Before that commission we stated that we had no grievance and no complaint to make against the tariff. Rough lumber and lumber dressed one side was on the free list, and this was fair and equitable, as the United States then had rough lumber on their free list, and our statement was that so long as the United States admitted lumber free the Canadian Government should do the same, but should the United States Government impose an export duty on lumber it was the duty of your Government to impose a similar duty. The latter condition has arisen; the United States has passed an act which not only imposes a duty on lumber, but presumes to punish by imposing double duty on the lumber of any foreign country which may impose an export duty on logs. Under these circumstances we ask the Government to impose an import duty on lumber entering Canada.

Our position is not changed since appearing before the tariff commission at Winnipeg. We believe in free lumber if it is reciprocal, but we object to the one-sided condition of affairs that at present exists, and believe that by meeting them in the same spirit they themselves display, the desired condition of free lumber on both sides of the line will be sooner reached than by giving them free access to our markets, which they are now allowed to enjoy. We believe that the vigorous policy of the Ontario Government, if supplemented by the imposition of an import duty on lumber, will bring to the front an influential and numerous body of men in the United States who will exert sufficient influence to bring about the desired condition of free lumber in both countries.

Some anxiety has been expressed that in Manitoba and the Territories a rise in the price of lumber would result from an import duty; this would not be the case, the price would remain as it is, but the trade, which is now divided to a very large extent, would then flow naturally to Canadian mills, giving employment to many thousands of Canadians (instead of, as at present, this labor going to foreigners), and give increased trade to Canadian merchants and manufacturers. If Canadians have any trade or calling which is capable of being called their national calling we think it is that of producing lumber, and they can be depended upon to keep the prices at a reasonable rate through competition. Lumber is widely diffused, and no corner has ever been successfully formed in lumber either in Canada or the United States. It has been the experience of the trade that if lumber from any cause becomes scarce and the price abnormal, it springs from all points of the compass to fill the demand and reduce the price.

It is quite generally accepted as a fact that large portions of the province of Manitoba and the Northwest Territories are treeless, but nature has provided within their own limits extensive tracts of timber which supply mills at Whitemouth, Selkirk, Winnipeg, Brandon, Dauphin, Rapid City, Calgary, Edmonton, Prince Albert, and numerous other points in Manitoba and the Northwest Territories. To supplement these sources of supply are the inexhaustible forests of British Columbia. To the east are extensive mills at Keewatin, Rat Portage, Savanne, Fort William and Port Arthur, and further east are the mills on Georgian Bay, which are now shut out of the American market and anxious to ship lumber to Manitoba. We might say that many millions of Georgian Bay lumber have been shipped to Manitoba and the Territories. With all these sources of supply operated by as enterprising lumbermen as any in the world, it would seem to us unreasonable to conclude that it is necessary to divide the limited home market of Canada with the United States lumbermen for fear of high prices, which cannot and will not occur, except in the minds of men who do not understand the conditions.

It is a great hardship to have the markets of the neighboring republic shut to us, and besides have to divide our market with the United States lumbermen. We can compete with them, and do compete, but with Canada treated as a dumping ground and foreign railways granting rates on traffic consigned to Canada much more favorable than they grant their own countrymen similarly situated, we cannot more than compete, and on even terms the trade would be naturally divided. As further evidence that no attempt would be made to advance the price in Manitoba or the Territories, we would state that all lumber is sold at one price, and that price is the Winnipeg price, and although there are many points in Manitoba and the whole of the Northwest Territories which cannot be reached by American lumber owing to the fact that the American and Canadian railways do not pro rate their freight charges, and all this territory is entirely dependent on Canadian mills for its lumber, still each and every point so situated is supplied at the price prevalent at Winnipeg, which is the centre of railway competition, the price here being the lowest in the province.

The mills at Rat Portage and Fort William shipped lumber to the United States, and would have continued to do so had it not been for the imposition of the United States duty; in fact the mills at Savanne were built with a view to shipping to the United States. The mills at Fort William devoted all their attention to the American market, and last season, owing to the threatened impost of United States duty, the mills at Fort William were idle and the logs were sawed in the United States; and to illustrate how the Canadian market is whipsawed, as it were, the Fort William people, although sawing in Duluth, were able to market a portion of their lumber in Sarnia, Ontario, thus proving that the Canadian market can be divided with ease by a country of pronouced antagonism to our lumber trade. These mills, like all Canadian mills, are shut out of the United States, and are besides forced to divide a limited home market with American lumbermen. There is twice as much plant in northwestern Ontario and Manitoba as would suffice to supply the home market, which is a strong argument that competition will keep the price reasonable.

We also protest against lumber being the only important industry allowed to be subject to free trade, more particularly when there is no reciprocal treatment by the United States. Our market is divided with foreigners, and everthing we use, such as machinery, belting, oil, pork, food, farm products, etc., are highly taxed.

Much capital is invested in the lumber business, which is now greatly impaired by the existing tariff arrangements, and we ask for relief at the hands of your government. So far as the mills of northwestern Ontario, Manitoba and the Northwest Territories are concerned, it is not more money per thousand that is required—it is more sales. This is in your power to grant, with great benefit to a large number of Canadians and to the detriment of no citizen of our country.

Respectfully submitted on behalf of the lumber trade of western Canada.

**This western deputation also met, in Toronto, a representation from the Lumbermen's Association of Ontario, including Messrs. J. B. Miller, John Bertram, John Waldie and C. D. Warren. The above memorial was unanimously endorsed, and it was decided to bring all possible pressure to bear upon the government to pass such legislation as was asked for.**

**The British Columbia Legislature, on March 18th, unanimously adopted a resolution urging the Dominion government to impose a duty on imported lumber equalling the United States duty on Canadian lumber.**

## NEW BRUNSWICK LETTER.

[Correspondence of the CANADA LUMBERMAN.]

THE business of Mr. Alexander Gibson, of Marysville, is about to be taken over by a company, to be called the Alex. Gibson Railway and Manufacturing Company, for which incorporation is now asked. It has been known for some time that a change was contemplated. Col. McLean, while in England a short time ago, arranged a loan of two million dollars for Mr. Gibson, and the government is asked to give authority to issue debentures for that amount secured on the entire property. Mr. Gibson's property embraces the timber limits of 200,000 acres on the Nashwaak, town of Marysville, cotton and lumber mills and the Canada and Eastern railway, valued at seven million dollars, and capital stock to that amount will be issued to Mr. Gibson. The loan will be a mortgage on the property, and will enable him to discharge his liabilities and leave a working capital of half a million, exclusive of the railway. Mr. Gibson's sales of lumber and cotton last year amounted to two million dollars, and he paid out at Marysville half a million for wages. His disbursements at St. John, loading 60 vessels with lumber, and the labor bills of the Canada Eastern, swell this to $700,000. The incorporation sought is the largest ever asked in New Brunswick.

The St. John River Log Driving Company will hold its thirteenth annual meeting at Fredericton on Wednesday, April 6th. This meeting will be a very important one, as besides the election of a board of directors and the usual general business, tenders will be opened for the contract of log driving on the river for a period of three years. The rates to be paid for the work are as follows: 1st, from the head of Grand Falls, 20 cents; 2nd, from the mouth of Salmon river, 18 cents; 3rd, from the boundary line on Aroostook river, 2 cents; 4th, from the mouth of Tobique river, 16 cents; 5th, from the mouth of Big Presque Isle river, 13 cents; 6th, from the mouth of Becaguimac river, 13 cents; 7th, from the mouth of the Meduxnikeag river, 11 cents.

### INDIFFERENT LENGTHS.

New Brunswick lumbermen are protesting against the new local freight rates enforced on the government railway by Mr. Harris, the new traffic manager.

In some sections of the province there was a heavy snow fall early in March, which interfered with log hauling. Reports of three feet of snow are common.

Mr. Richards has a large number of teams hauling supplies into the woods from Boistown and Glassville for next year's operations. He will have about $20,000 worth stored in the woods.

ST. JOHN, N. B., March 21, 1898.

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., MARCH 30, 1898 No. 11.

**CANADA LUMBERMAN**

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the 'Canada Lumberman."*

Toronto, Canada

*Toronto, Canada*

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WE HAVE FOR SALE:—A few cars 1½" Key Pine, 1½ inch Ash, inch Basswood, ¾", 1" and 1¼" Maple. Box 10, BROWN'S CORNERS, ONT.

WANTED.

A CAR LOAD OF 2, 3 AND 4 INCH DRY OAK. Send price to THE RAT PORTAGE LUMBER CO., Limited, Rat Portage, Ont.

WANTED FOR CASH.

DRY SOFT ELM, BLACK ASH, RED OAK, Birch, Basswood and Hard Maple. Will inspect at shipping point. E. C. BRADFORD, 71 Buhl Block, Detroit, Mich.

WANTED.

TO CONTRACT FOR LARGE MILL CUT OF Soft elm, all grades. Address
C. P. VOSBURGH,
257 Broadway, New York.

TO MILL MEN.

HAVE YOU ANY STOCK WHICH YOU WISH to sell? If so, make the fact known to probable buyers by placing an advertisement in this department. Address, CANADA LUMBERMAN, Toronto.

FOR SALE.

ABOUT 25,000 FEET FIRST-CLASS WHITE oak, 1 inch to 12 in.; 50,000 ft. 1 inch basswood, mill run (dead culls out); and 10 000 ft. 1 to 2 in. ash, via C.P.R. or boat. RIGAUD MILLING CO., Rigaud, Que.

### CURRENT TRADE CONDITIONS.

ONTARIO.

The local trade of the month of March has shown an improvement over the corresponding month last year which should be gratifying to the trade. The fine weather has no doubt caused an earlier demand for lumber than usual, but apart from this there are some favorable conditions. Not for many years has the outlook for building operations been so good, the commercial improvement having apparently induced capitalists to venture upon new undertakings. The lumbermen of the province are now directing their efforts to securing the imposition of an import duty on lumber, which, if successful, will relieve the trade of western Ontario from much unfair and ruinous competition. Recent sales of pine to Eastern States points have been of little account. Several of the Ottawa valley manufacturers have sold their usual quantity of deals to Quebec houses. Hardwoods have not changed, and dry stocks of black ash and elm command good figures.

Reports from the woods state that the snow is fast disappearing, and some of the logs may be left in the woods. The cut by Canadian firms for manufacture at home has not been large.

QUEBEC AND NEW BRUNSWICK.

In the shipping of Ottawa pine from Montreal there is likely to be the usual spring activity, as we learn of a number of charters that have been made for May and June loading. Shipments of spruce will be light, as the British market is still suffering from last season's overstock. The local demand for lumber promises to be of average volume. Outside of Montreal building is fairly active, but in that city there is little doing. Quotations for Maritime province spruce cannot be given, as no sales have been made. The United States trade exhibits more life, over 2,000,000 laths being shipped to New York and Boston last week. Cedar shingles are weak. The lumbermen have had a successful logging season, but the cut on the St. John and other waters has been smaller than for many years. There are good prospects of all the logs reaching the mills.

MANITOBA AND BRITISH COLUMBIA.

The expansion of trade in Manitoba was temporarily checked last week by a huge snow storm, which blocked the railways and caused a cessation of outside work. The demand for lumber is likely to be quiet until the weather becomes more spring-like. In British Columbia manufacturers are shipping lumber to the northern gold fields, several million feet having been sent to Dyea, Skagway, etc. The construction of the Stikeen-Teslin Lake Railway, shortly to be commenced, will provide an outlet for a considerable quantity. Local trade is also good. There have been numerous inquiries from foreign countries, but the position of freight rates is so unfavorable that shippers can see no prospect of making a reasonable profit. The Australian market seems to be improving.

UNITED STATES.

Reports from the white pine districts of the Northern States contain the information that the open winter has resulted in curtailing the log input. A conservative estimate places the quantity of logs likely to reach the mills at twenty-five per cent. less than was reckoned on in the early winter. This condition has caused manufacturers to be even firmer in their demands, and consequently wholesale dealers are not buying to any extent. Added to the high prices asked at lake points is the probability of freight rates being less favorable than last season. Indications point to an opening vessel rate from Duluth to Buffalo and Tonawanda of $1.75 a thousand, against $1.62½ last season. It can readily be seen that buyers in the east are in a somewhat unenviable position, and until wholesale prices advance business will be limited. It is probable that the circumstances above referred to will be the means of turning the attention of buyers to Ontario as a source of supply, notwithstanding that a two dollar duty must be paid. The eastern markets are exhibiting the usual spring activity. In the New York district there is a good movement of lumber, and building operations are opening up well. Boston trade is a little backward, particularly in spruce, but as the season's supply will not be heavy, a firmer market is anticipated.

Hardwood delaers report a great scarcity of white oak. Elm and black ash are also in light supply and good demand, and basswood has taken on new life within the past couple of weeks. Birch has been more asked for, but as there is an ample stock, the mills have not been called upon. The general improvement in business is likely to result in the greater use of finer hardwoods for interior finish.

FOREIGN.

Buying by British merchants is proceeding very slowly. Shippers do not feel disposed to offer concessions, and merchants who hold ample stocks are not anxious to purchase at present quotations. Concerning Canadian business the Timber Trades Journal says: "There have been large sales made to London of first, second and third wintering pine, of all the leading stocks, quite as much as usual, but fourth pine undoubtedly is under a cloud, the quantity in stock being far too large. Spruce is coming into better demand, and prices are decidedly firmer. There has not been the same freedom in buying, and the probability is that the spring shipments will be very light in consequence, as we understand not half the usual sales have been made to this country of Canadian white wood. On the spot here there is likely to be a rally, as the realizations in the public auctions are at an end, there being practically nothing now left in first hands. Red pine does not appear to be very well received in this market, judging by the prices realized under the hammer; the lengths are unsuitable, and if the stuff is to make any headway these should be changed to ordinary building dimensions, and shippers would do well to send more first quality and less of unsorted."

### SHIPPING MATTERS.

Vessel charters from Montreal to Liverpool are being made at 40s to 42s 6d.

Owing to the demand for tonnage for grain, vessel owners are holding freights at 45s from St. John, N. B., to British ports. The market is practically at a standstill. Coastwise freights are firm, a vessel having been chartered for New York above $2.50.

Mr. A. E. Harris, general traffic manager of the Intercolonial railway, at a conference with lumbermen at Truro, N. S., assured them that all grievances in connection with lumber freight rates would be remedied at once. A new tariff will be put into effect.

## STOCKS AND PRICES.

### CANADA.

A. McMullin has hauled to Wentworth Station, N. S., about 1,000,000 feet of deals, and has yet about 250,000 feet to handle.

A syndicate at Dorchester, N. B., has been negotiating for a lumbering property of nearly 40,000 acres, with mill, near Baie Verte. The property is said to have been offered for $40,000

Graham, Horne & Co., of Fort William, Ont., purpose sawing 10,000,000 feet of lumber at their mill at that place this season. They had upwards of 100 men in the bush all winter.

The Shepard & Morse Lumber Company, of Ottawa, have received a carload of mahogany from Honduras. The wood is valued at $2,000. The Shepard & Morse Company are interested in the mahogany forests of Honduras.

The Holland & Emery Company has logged an average quantity during the winter and will saw the stock at Byng Inlet. It is doubtless intended to market it all in Canada, inasmuch as the company announces the closing out of its Buffalo yard.

William Peters, of Parry Sound, put in 40,000,000 feet of logs during the winter. Thirty million feet of these logs will be towed across the lake to stock his Bay City, Mich., mill. The remainder will probably be sawed at Parry Sound, and the product marketed in Canada.

According to the Timberman Arthur Hill & Co., Limited, have put in 15,000,000 feet of logs on the Georgian Bay this winter, but have sold them in bulk to the parties who have previously done sawing for them. The Buffalo yard of this concern will be closed out at once.

The Cutler & Savidge Lumber Co., of Cutler, Ont., has logged less than 4,000,000 feet this winter, simply a clean-up of last season's cutting. They will not run their mill during the present season. They have 14,000,000 feet of lumber on hand, which they expect to dispose of to the local trade.

According to Ottawa papers J. R. Booth has disposed of his entire deal cut of this season, the purchasers being Robert Cox & Company and Sharples & Company. The sale represents over 25 per cent. of the entire lumber cut for the season, and is composed of all the best lumber produced.

About 1,000,000 feet of sawn lumber, belonging to the estate of the Cascapedia Pulp and Lumber Co., were sold at Quebec last week to Price Bros., at $3.40 per thousand feet. The steamer Marie Louise was sold to Epiphane Gagnon, of Chicoutimi, for $4,150, and 14,000 logs to A. Charlebois, contractor, at 14 cents per log.

Reports received a few days ago from the Quebec lumber woods stated that there was between three and four feet of snow there, and everything was in good condition for hauling. The chances for stream driving are excellent. The ice in the brooks is very weak, and there is abundance of snow to provide all the water that is required for easy driving, which it is expected will begin shortly before the middle of April.

The following are the exports from St. John, N.B., for the week ending March 26th: For City Island, per sch. Prudent, 193,750 ft. deals, by Stetson, Cutler & Co.; for Boston, per sch. James Barber, 68,316 ft. boards, 39,212 ft. pine do., by A. Cushing & Co.; for Boston, per sch. Valdare, 587,000 laths, by Chas. Miller; for Boston, per sch. Valetta, 131,850 ft. plank, by A. Cushing & Co.; for Salem, per sch. Mary George, 111,060 ft. boards, by W. H. Murray; per sch. Wendall Burpee, 159,754 ft. plank, by Stetson, Cutler & Co.; for City Island, per sch. Cora May, 191,880 ft. deals, by Stetson, Cutler & Co.; for New York, per. sch. Reporter, 154,396 ft. deals, by Miller & Woodman; for City Island, per sch. Onward, 139,951 ft. deals, by Stetson, Cutler & Co.; for Salem, per sch. Lena Maud, 120,010 ft. boards, by N. H. Murchie; for Boston, per sch. F. & E. Givan, 104,500 ft. boards, by N. H. Murchie; for Milton, Mass., per sch. Bertha Maud, 105,850 ft. scantling, 50,000 cedar shingles, by A. Cushing & Co.; for City Island, f.o. sch. W. H. Waters, 178,278 ft. plank, by Stetson, Cutler & Co.; for Boston, per sch. A. Gibson, 65,152 ft. scantling, 49,650 ft. plank, by A. Cushing & Co.; for Boston, per sch. Avis, 515,384 ft. plank, by S. T. King & Sons; for New York, per sch. S. A. Fownes, 157,875 ft. deals, by Chas. Miller; for Vineyard Haven, per sch. Cora B., 11,006 ft. scantling, 130,260 ft. plank, by Stetson, Cutler & Co.; for New York, per sch. Chas. J. Wallace, 1,089,000 laths, by A. Cushing & Co.; for Vineyard Haven, per sch. Eltie, 820,000 laths, by Stetson, Cutler & Co.; for Liverpool, per ss. Lake Superior, 350,382 ft. deals, 39,167 ft. scantling, 17,852 lt. ends, 37,777 ft. boards.

All the lumbermen of the upper St. John river, in New Brunswick, look forward to a comparatively inexpensive season for getting their logs to the booms. The cut on the St. John, as on the Miramichi, will be much lighter than last year. The operators on the upper branches have cut as follows:

| | Feet. |
|---|---|
| John Kilburn | 7,000,000 |
| Gilman, Burden & Bros. | 5,000,000 |
| Cunliff Bros. | 6,000,000 |
| Dickie | 4,500,000 |
| McCallum | 4,000,000 |
| Noble | 4,000,000 |
| Stevens | 3,00 ,000 |
| Morrison, cedar | 3,000,000 |

### FOREIGN.

Indications point to an early commencement of rafting operations from the Georgian Bay to Michigan points.

The East River Mill & Lumber Co., of New York, made a purchase last week of 650,000 feet of 13-foot spruce stock.

At Bay City, Mich., box lumber is in good demand and prices have an upward tendency. S. O. Fisher has sold 1,500,000 feet to be shipped to Tonawanda.

Only a few million feet of logs will reach the Saginaw river from its tributaries this season. It is estimated that 10,000,000 feet will cover the output, while in 1882 it was 600,000,000 feet.

An estimate from Duluth places the log production of the past season at 240,000,000 feet. This is 50,000,000 feet less than was estimated last fall. A reduction is also reported from other districts.

Reports from New York state that the South American demand has greatly improved this spring, although neither white pine nor spruce have as yet advanced in price. The tendency to cut prices, however, has disappeared.

The largest sale that has been made in the Ashland, Wis., district for some months was consummated through D. L. Wiggins, who sold to Lefaiver & Co., of Oswego, 2,000,000 feet of pine. Another sale of 3,000,000 feet of Norway is said to be pending, at an advance of $1.50 per thousand over last year's quotations.

It is estimated that the cut of logs last winter on the Upper Mississippi river was about 500,000,000 feet. In addition to the new logs there is 230,000,000 feet carried over from last season, making the total supply available in the neighborhood of 750,000,000 feet. The prospects are that the mills will make an early start.

Buffalo dealers report a decided stir in basswood, which has been dull for some time past. Taylor & Crate have sold large quantities within the past two weeks. Pine is steadily improving, although prices are no higher than last month, there being an apparent disposition on the part of some to quote below the published prices. Dealers anticipate an advance in the lower grades, which are growing scarcer, at an early date. The general demand for shingles is good.

Concerning a recent auction sale held by Foy, Morgan & Co., the Timber Trades Journal says: "Spruce was mostly represented in oddments of various qualities, and for these current values are not easy to determine, but compared with what similar specifications have been realizing lately, there does not seem any change in the auction value of such descriptions. It is quite possible that Canadian white will improve, as we shall not see any more of the heavy realizations, the bulk of the stocks of both pine and spruce having now passed out of the importers' hands. Red pine went indifferently, but 13 ft. lengths are an objection, as this class of deal has to be used for building purposes, where a more varied specification is preferred." The above remarks show that, apart from pine, trade is not active. We believe, however, that spruce is gradually strengthening, and, with the increased demand from the east coast, will show a good season's consumption.

Weather conditions have seriously interfered with the lumber trade at Saginaw, Mich. Quotations have not changed, log run being quoted at $14 to $18, and stock cut from selected logs up to $30. Box is worth $8.50 to $9 and bill stuff $8 to $9. The shingle market is steady, with quotations ranging from $2 to $3 for white pine and 25 to 50 cents lower for cedar. Comparatively few shingles will be manufactured on the Saginaw river this season.

Merrill & Ring, of Duluth, recently sold 5,600,000 feet of log run lumber to eastern parties, 4,500,000 to go to Buffalo and the balance to Tonawanda. J. A. Kent & Company sold 3,000,000 feet, to go east upon the opening of navigation, while another sale of 5,000,000 feet is reported. In some instances the prices realized were from $1 to $2 higher than the quotations of last fall. There is a brisk demand for box lumber, but little of it on the market.

From present indications, early shipments will be made from Manistee, Mich. One local concern is said to have secured nearly all the hemlock lumber in sight and claims it will handle 30,000,000 feet this year. Pine piece stuff in that market is firm, yard dealers selling at $11. Common inch is steady at 50 cents to $1 higher than the closing figure of last fall, with a decided shortage apparent. Box factories are taking common inch in bulk lots. Cull pine inch is well sold out and prices are stiffening.

## THE EASTERN HARDWOOD MARKETS.

The Hardwood Record of March 26th reviews the hardwood markets of the Eastern States as follows:

BUFFALO.—Prices are about the same on staples, such as quartered oak, plain oak, ash and walnut. The rumors of war, which change every day, do not seem to affect the lumber market in any way. Lumber is coming in quite freely from the west and south, by rail, and it will be but a short time before navigation opens now, and red oak, maple, soft elm and black ash will be coming in by the boat load from Wisconsin, Michigan and Canada. The tariff is still the main stumbling block on handling Canadian lumber. The mill man invariably puts on the two dollars to the price he is holding his lumber at—if making delivered prices; otherwise the purchaser has to stand both the tariff and freight—when buying f.o.b. cars at shipping point. Owing to this state of affairs it is not expected there will be anything like the movement in Canadian lumber to this side, unless they make up their minds to divide up on the tariff and stand one-half of it themselves. It seems to us here on the border that if our cousins would adopt this plan the receipts of lumber from there would more than double.

NEW YORK.—The outlook for spring trade has not been as good in this market for a number of years. The building trade has promised well for the spring, and will, undoubtedly, under any circumstances, prove good. Throughout all this section of which New York is the center conditions are much improved, and if there be no untoward or unlooked for change the coming season will be a profitable one for the hardwood lumbermen. The demand for furniture both in the cheaper and finer grades has much improved of late. Michigan maple and birch are in good demand at fair prices and are largely in demand by furniture manufacturers and others. Taken altogether the situation in this city is strong. The demand for all classes of stock has improved somewhat and the offerings are smaller, so lumbermen will find New York a good market to cultivate.

BOSTON.—The quantity of hardwood lumber being offered on this market is less than for a good while. The promise for the building trade this spring was very bright up to a short time ago. During the past two or three weeks, or since the prospects of war have become so much stronger, the building trade has had a slight relapse. Trade shows a tendency to pick up, and is reasonably fair. The volume of trade has not increased as much as it has in some western markets, but the drawing off of stocks to meet the western demand has had the effect of making the market on all classes of hardwood very firm. Oak is especially in good demand, with prices strong. Less poplar is being offered than has been the case in a good many years. Other lines of hardwood in the upper grades are freely taken, and when the war fever subsides trade promises to be good.

Beecroft & Talbot, planing mill, Flesherton, Ont., are reported to have assigned.

The Fitch, Aldrich & Bush Co. has been incorporated at Elmira, N.Y., with a capital stock of $50,000.

The Bartlett Lumber Co., of Boston, Mass., have decided to give special attention to the lumber trade of New Brunswick. Mr. A. G. Van Buren has been appointed agent for the company at St. John, and will look after their interests in the province. The company are prepared to handle a large quantity of lumber. The intention is to buy from the American mills at St. John, to avoid the duty. He is negotiating with some of the mills for their entire output.

## LUMBER FREIGHT RATES.

### CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse, $2.20 per M ft., (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1 00 per M ft.; Arnprior to Montreal, $1.50 per M; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to New York, via Albany and Williams Line, seasoned pine lumber and shorts, in lots 50 M feet and over, $3 per M; under 50 M feet, $3.25 per M; from Arnprior, lots over 50 M feet, $3.50; under 50 M feet, $3.75 per M; from Parry Sound, lots 50 M feet and over, $4.00 per M; seasoned lath from Ottawa, lots 250 M pieces and over, 55 cents per M pcs.; lots under 250 M pcs., 60 cents per M pcs.; from Arnprior, lots 250 M pcs and over, 65 cents per M pcs.; under 250 M pcs., 70 cents per M; from Parry Sound, 80 cents per M pcs., lots 250 M and over; (rates named on lots under 50 M feet lumber and 250 M pcs. lath subject to extra tonnage, and are applicable to all points in New York harbor excepting points above Madison avenue bridge in Harlem river, to all points in Brooklyn, and to Jersey City proper; Ottawa to Boston, Portland and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

### GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

### CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent, C.P.R., writes as follows under date of February 14th: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct, Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior, Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30,000 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa, Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M feet and over, $3; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 55c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $3.25; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4.25; under 50 M feet, $4.50; lath, 250 M pieces and over, 60c. per M pieces; under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3 50; under 50 M feet, $3 75; hardwood, 50 M feet and over, $4 50; under 50 M feet, $4 75; lath, 250 M pieces, 65c.; under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts, 50 M feet and over, $3.75; under 50 M feet, $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 70c.; under 250 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c. per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs.; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.; lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 11c. per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil. The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber."

# THE RETAILER AND Wood-Worker

## ELECTRICALLY EQUIPPING A WOOD-WORKING FACTORY.

Having decided to put in electrical transmission, the first thing is to estimate the horse power required by the machines in the factory, writes James F. Hobart, M. E., in the Wood-Worker. I will begin with a small shop, to have a pony planer, a cutting-up saw, a pattern makers' saw (reversible, with two saws), a band saw, a shaper or irregular molder, three speed lathes, a mortising machine, a sticker, a tenoning machine, grindstone and several little special home-made machines. We will set down the several machines for power, as follows :

| | | | |
|---|---|---|---|
| Pony planer | 5 | h.p. | speed 1,000 revolutions |
| Cutting-up saw | 2 | " | " 2,500 " |
| Pattern saw | 2 | " | " 2,800 " |
| Band saw | 1 | " | " 600 " |
| Shaper | 3 | " | " 800 " |
| Speed lathes | 3 | " | " 900 " |
| Mortiser | ½ | " | " 200 " |
| Tenoner | 2 | " | " 800 " |
| Grindstone | ⅛ | " | " 100 " |
| Special machines | 2 | " | 500 to 1,000 " |
| | 20⅝ | h.p. | |

Here is over 20 h.p. required at the several machines. There is one point, however, that may be considered. In a small shop it is seldom or never the case that all the machines are in operation at the same time. If there are only two or three men in the shop, only a like number of machines can be operated at the same time, and the motive power may be put in accordingly. If, however, all the machines are to be run at the same time, more power will be necessary than when otherwise is the case. In this instance it will be figured that all the machines may be operated at the same time, and power enough provided to run them continually. From the natural arrangement of most wood-working shops, the cut-off saw, the planer, one of the speed lathes (the heavy one), and one of the special machines may be driven in one group and called the "heavy tools" of the shop. A 10-horse motor may be put in to run this group and another 10-horse motor used for driving the remainder of the machinery in another group.

It is a peculiarity of electric motors that they may be operated for short periods of time—say from 15 minutes to an hour—at a capacity far above that at which they are rated. For instance, the 10 horse motor may be made to yield 15 or 20 h.p. for nearly half an hour at a time without damage to the motor, although it will heat up considerably during the period of overwork. It is this principle which allows the putting in of a comparatively small motor when only one or two men are to work in a shop. In that case, two five-horse motors would run the shop here described, as for the short periods of time the greater amount of power would be required, the motors could be called upon to furnish it without damage. If but one man ever expected to work in the shop, a single five-horse motor would be sufficient and all the tools could be belted direct from a single shaft. This is not practicable when the engine is used to drive the shaft direct, as owing to the slow speed of the motive power machine, the shaft must be driven at a speed ranging from 200 to 300 revolutions per minute. With the electric motor arrangement the shaft can be speeded up to 600 revolutions per minute and driven direct from the motor, or with only a single reduction of speed.

With two motors of 10 h.p. each, let there be two shafts, each with its own group of machines, both shafts running at 600, and the machines connected to the shafts by means of friction clutches. The several speeds given in the table above are for the pulleys of the several machines to which the belts must lead from the motor or shaft. The saw speeds are the speeds of the mandrels. Of the planer and sticker the speed of the shaft in the machine is given. In case the planer does not belt from an internal counter, then a different speed will be required than in the table. The lathe speeds are those of the shafts on which the step pulleys are placed. The mortising machine speed is that of the pulley on machine, etc.

Having only 10 h.p. to transmit, a quite light shaft may be employed at the speed named. A pretty good formula for the diameter of the shaft required, is to divide the horse power to be transmitted by the speed per minute, take the fourth root and multiply by a constant ranging from 5.26 to 3.03, according as an iron or steel shaft is to be used, and it is to be very stiff, or well supported. A $\frac{7}{16}$-inch steel shaft will be ample to run either group of machines at the speed mentioned, viz., 600 revolutions per minute. Such a shaft will run easily, consume very little power, and is large enough to hold the friction clutches securely if they are placed close to the hangers.

The motor which drives each shaft should be hung from the roof or placed on a sort of shelf made by bolting a couple of plank brackets to a convenient post, up above the heads of the workmen. There the motor will be out of the way and there will be less temptation to "monkey" with it. A hood or box should be built over it which will keep out all dirt and dust that may settle there. Do not box the motor up tight, for it is necessary that the machine be well ventilated at all times, to carry off the heat generated in the wire coils. If it is boxed tight there is no circulation of air, and the motor will heat badly.

The next consideration is the current. If the mill is an isolated concern, a dynamo must be put in the engine room and the engine coupled direct thereto. If the shop is in a city, it may be cheaper to purchase current from the lighting or the street railway company. Sometimes, when only two or three miles from town, and there is a high tension service, the power may be transmitted at 6,000 volts with but little loss, and then changed to a low tension current at the shop, by means of "step down" transformers. The low tension currents are also of the alternating variety, and to operate ordinary motors with this current, it must be transformed to a continuous current by passing it through a sort of dynamo called a "rotary transformer." This machine changes the low pressure alternating current into a low pressure continuous current, which passes directly to the motors. All these appliances consume some of the energy, and it is better to use the direct low pressure, or low tension (110 volts) current when it can be obtained cheaper than by making it on the premises, or by transforming the high pressure current brought from a distance. Here all the details must be known in order to make a profitable decision in the matter.

---

White maple is being successfully used in the manufacture of bicycle rims.

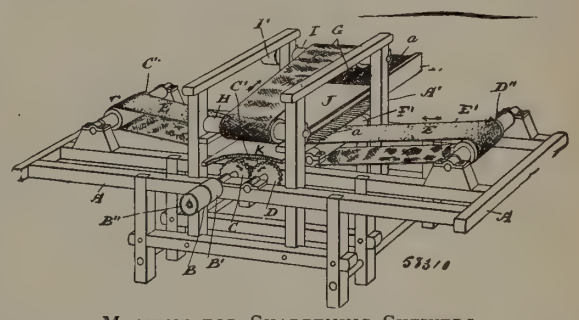
The Commercial says that one of the growing industries of Winnipeg is the wood working establishment of La Londe & Millord. The factory is supplied with planer, moulder, scroll saws, jointer, mortising machine, rip and cross cut saws, turning lathes, shaper, boring machine, spindle chuck, etc., all from the works of Macgregor, Gourlay & Co., of Galt.

A wise man of Philadelphia has invented a combined sawing and planing device especially applicable for sawing thin boards into strips, such as are used for cigar boxes, etc. On the outside of the circular saw are separating discs, which prevent the sawed edges from closing together, and on the outside of the separators are cutting or planing discs, which plane the insides as fast as the saw cut is made.

## RECENT CANADIAN PATENTS.

The Patent Office Record contains descriptions of several devices of interest to woodworkers, for which patents have been granted in Canada.

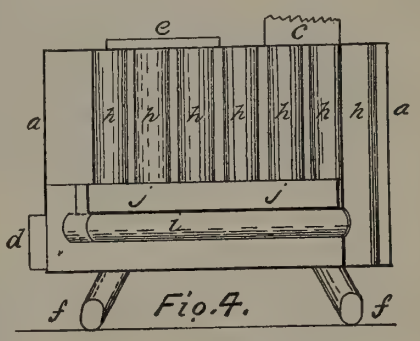
George McKenzie, of Wingham, Ont., has been granted a patent for an apparatus for sharpening skewers, which is illustrated herewith. It consists of the combination of two endless sand belts mounted on rollers journalled on the frame so as to have a certain pitch from the horizontal, a skewer table and a transverse endless belt so located as to bear on the series of skewer rods projecting over the sides of the skewer table so as to be in contact



Machine for Sharpening Skewers.

with the said belts and pass them transversely across the sand belts through the machine. E and E′ are the sand belts, C and D the gear wheels, C′, D′, C″ and D″ the rollers, F and F′ the taper rollers, G the endless transverse belt, H and I the rollers, J the guide piece, K the skewer table, C the feed piece, and l the grooves.

A method of and apparatus for producing coal from wood, sawdust, etc., numbered 57,953, has been patented in Canada by W. A. G. V. Heidenstam, of Skowick, Medelpad, Sweden. The claim is for a method of producing charcoal from wood, peat, or other suitable material, which consists in feeding or pressing the prepared raw material in and through heated charring-tubes or channels in such a manner that the material is charred and compressed while moving through, leading off the different bye-products where they are formed, and finally cooling off the charcoal.



Heater for Burning Sawdust.

A heater for the purpose of burning sawdust, patented by Frederick Sheppard and John Alexander, of Peterboro', Ont., is illustrated above. It consists of the combination in a metal heater having an outside casing, a, a, a, a, fuel opening e, smoke pipe c, damper opening d, legs f, f, f, f, vertical air flues h, h, h, h, horizontal air flues i, i, rim j, j, and fire clay filling K, K, K, K, with the perforated grate O, O.

Two patents, Nos. 58,219 and 58,220, have been granted to George Glass, of Port Huron, Michigan, for slab gauges or indicators for saw mill carriages. Wm. J. Ellis, of Winnsboro, Louisiana, has patented a saw gummer, and Henry McDermott, of Marinette, Wis., saw mill set works.

---

The Mississippi Wood and Iron Works Co. has been organized at Carleton Place, Ont., to start a new industry.

There was never a time when so much attention was paid to improving machinery for making boxes and other forms of packages as at present. Nearly all the larger makers of woodworking machines include some special box-making machines in their lines, while a number of very good concerns make a specialty of this line of machinery. Machines for making lock-corner boxes have been given special attention during the past two or three years, and the man who wants to make these boxes can take his pick of a number of good makes of machines.

# THE NEWS.

—Stewart & Reeker have opened a retail lumber yard at Roland, Man.

—Doris & Gatchell will probably build a stave factory at Kinmount, Ont.

—John Hanbury contemplates starting a wood working factory at Brandon, Man.

—Macpherson & Schell, of Alexandria, Ont., have erected a large new office.

—W. D. Vansickle is building a shingle mill in connection with his saw-mill at Barrie, Ont.

—C. A. McCool, formerly of Geneva Lake, has started a saw mill at Coal Creek, B. C.

—W. H. & W. J. Blackhouse have succeeded Wm. Gordon, sash and door factory, Udora, Ont.

—It is reported that the Georgian Bay Lumber Company will erect a saw mill at Canoe Lake, Ont.

—The Keewatin Lumber Co. have recently constructed new dams and put in water wheels at Keewatin, Ont.

—Arrangements are being made for the erection of a saw mill at the mouth of Mossy river, Lake Winnipegosis.

—The Bank of Toronto recently placed a new dynamo in the Fenelon Falls mill, with a capacity of 325 lights.

—The Sauble Falls Ranch & Lumber Co., of Sauble Falls, Ont., has been incorporated, with a capital of $75,000.

—A saw mill at Shannonville, Ont., owned by Francis Wallbridge, of Belleville, was badly damaged by flood recently.

—The town of Clinton, Ont., has granted to W. Doherty & Co. a bonus to assist them in rebuilding their organ factory.

—Wm. Train has purchased the water power saw mill at Stirling Falls, Ont., recently operated by the Stirling Falls Milling Co.

—A provincial charter has been granted to the Columbia Lumber & Trading Co., of Nelson, B. C., with a capital of $30,000.

—The opinion of Ottawa lumbermen is that the ice will be cleared from the river this spring a fortnight or so earlier than usual.

—Mr. Adam Beck, veneer manufacturer, London, Ont., was an unsuccessful contestant for that riding at the late provincial elections.

—R. Kinney is establishing a planing mill at Gladstone, Man., and will put in machinery for the manufacture of sash and doors.

—The Pacific Coast Lumber Co., of New Westminster, B. C., has advanced the wages of its day laborers from 12½ to 15 cents per hour.

—The Golden River Lumber Co., of Golden, B. C., now employ 95 hands. The company have recently completed a large contract for ties.

—The High Commissioner for Canada has received an inquiry from a Toronto firm regarding the prospects of exporting sash, doors, etc., to Great Britain.

—Mr. Frank Davidson, of E. D. Davidson & Sons, Bridgewater, N.S., is at present in England on a business trip. He has sold considerable spruce through his agents, James Smith & Bro., of Liverpool.

—P. McLaren purposes building a large saw mill near the spring in the Crow's Nest Pass, for which machinery has been ordered. It is said that this mill will exceed in size the C.P.R. mill at Coal Creek.

—The Department of Interior at Ottawa is said to be considering the advisability of changing the method of disposing of timber berths in the Yukon district, by placing a set fee upon each five mile block.

—The total amount of lumber received in the Chicago market in 1897 was in round numbers 1,450,000,000 feet, against 1,320,000,000 feet last year. Shingle receipts amounted to 375,000,000, as against 300,000,000 in 1896.

—The Ottawa Saw Works Company report an active demand for saws, having recently booked orders from all parts of the Dominion. Their business so far this year has been more than double that of any other three months since they commenced business.

—Jas. S. Neill has recently started a factory at Nashwaaksis, N. B., for the manufacture of lumber drivers' boot calks, having purchased the Hathorne patent for manufacturing these articles in Canada. The factory has a capacity of one million calks per week.

—Mr. Albert Oakley, for several years manager of the lumber business of Davidson & Hay, Toronto, has accepted a position with the Cariboo Hydraulic & Mining Co., of Cariboo, B. C. Before leaving Toronto Mr. Oakley was the recipient of many tokens of friendship.

—J. R. Booth, of Ottawa, is erecting an incinerator for burning the saw-dust of his mills. The bill preventing the dumping of saw-dust into the Ottawa river takes effect in June. The Bronson & Weston Company are putting in carriers to take the refuse away from their mills, but have not yet decided how they will dispose of it.

—Andrew Haslam, of Nanaimo, B. C., is preparing plans for a large saw-mill, sash and door factory, to be erected at that place. The machinery of the present mill will be removed, and larger machinery added. The work of construction, which will include loading docks, will be commenced immediately.

—Graham, Horne & Co. have been in business at Fort William, Ont., for 21 years. Their annual cut is from eight to ten million feet, which is manufactured by band mills. They are now cutting on their limits on Pine river, the logs being floated to the lake and then towed into the Kaministiquia river and to the mill, a total distance of some fifty miles.

—An application has been made to the Dominion parliament for a charter for the Nickel Steel Company of Canada, with the immense capital of $20,000,000. The chief promoters are lumbermen, and include the following: Alex. Fraser and David McLaren, of Ottawa; Alex. McLaren, of Buckingham, Que.; Nathaniel Dyment, of Barrie. Should the government impose an export duty on nickel, the company will establish smelters and manufacture nickel steel for export.

—The report of Mr. R. J. Skinner, Timber Inspector of British Columbia, states that the cut on crown lands during 1897 was 61,961,647 feet, and on timber lands 39,014,010 feet, making a total of 100,975,657 feet, on which the royalty paid was $50,487. On private property the cut was 4,963,740 feet, making a gross total of 105,939,397 feet. The estimated rebate allowed for export was $17,358, and the rental accruing on timber leases $46,931.

—Mr. B. E. Fernow, Chief of the United States Forestry Division of the Department of Agriculture, in an address before the National Association of Paper and Pulp Manufacturers, said that the supply of spruce in that country was threatened by the inroads of the pulp mills, and he thought unless present methods were changed, it would be nearly gone in ten years' time. The consumption of wood pulp in paper manufacture, Dr. Fernow said, was equal to 2,000,000 cords per year.

—Mr. Davis obtained the following information in reply to a question asked in the Dominion parliament recently: The Moore & McDowall Company held under license timber berths north of the north branch of the Saskatchewan river to the extent of 265 square miles. They had assigned to George Burn, general manager of the Bank of Ottawa, who had paid all the ground rents due up to December 31, 1898, and all royalty up to June 30, 1896. The company had not a mill in operation, as required by regulations, but negotiations were nearly completed for the purchase of a saw mill formerly operated by the company at Saskatchewan territory.

—The Pacific Coast Lumber Co., of New Westminster, B. C., have commenced the manufacture of grained lumber. By the method employed the natural grain of various native woods is cleverly counterfeited. Clear cedar is used, mostly ½" thick and 4 inches wide. The lumber is first thoroughly kiln dried, then tongued and grooved, and a small V joint run on the edges. Then it is smoothly sand papered and passed over to the graining factory, where, for certain designs, the lumber is oiled by machinery; for other designs it is painted two coats. It is then piled open and grained on the patent graining machine, of which H. Silver is the patentee. The effect produced is as a veneering of oak, walnut or maple.

—The appeal case of Lindsay vs. Klock was recently heard at Ottawa, judgment being reserved. This case, referred to in a former issue, arose out of the destruction by fire of the Lindsay steam saw mill at Aylmer, Que., in May, 1896. The mill was leased to Klock Bros., and the plaintiff claimed that they were responsible for the fire owing to negligence, and also because they had made alterations in the building and introduced Dutch ovens to burn saw-dust, which increased the fire risk, without the permission of the plaintiff. The action was dismissed by the trial court of Hull, but an appeal was allowed by the Court of Queen's Bench at Montreal, and a verdict given for the plaintiff for $10,000. In the appeal case recently heard the defendants asked to have the judgment of the trial court restored.

## CASUALTIES.

—David Giggey had his right arm broken in Clark, Skillings & Co.'s spool wood mill near Newcastle, N. B.

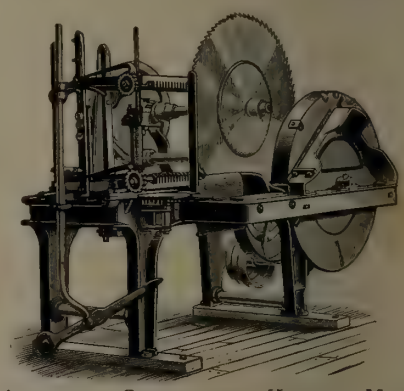
—Mark Whalen, of Miramichi, N. B., was killed in Welch's lumber camp at Burnt Hill by a log rolling over him.

—Louis Soucisse was recently seriously injured in Bradley's saw mill at Buckingham, Que. At last report little hope of his recovery was entertained.

—Martin Bulger, of Shramrock, was killed in the lumber woods in the upper Ottawa, near Biscotasing, while working for Mr. Barnet. He was struck by a falling tree.

## LANE AUTOMATIC SHINGLE AND HEADING MACHINE.

THE frame of this machine, of which an illustration is given, is of heavy cast iron, well supported with tubular braces and strongly reinforced by broad ribs. The saw arbor is finished 2 3-16 inches throughout, of best forged steel, running in long adjustable phosphor babbit bearings. This saw has 18 or 20 inch flange, drilled and fitted



LANE AUTOMATIC SHINGLE AND HEADING MACHINE.

from steel templet, and either saw or flange can be duplicated at any time.

The lower jaw which holds the under feed roll is part of the carriage casting, while the upper jaw is movable to accommodate blocks from 16 to 24 inches long, and in the case of a 40 inch machine the standards can be raised and by putting iron plates underneath cloth boards 31 inches in length can be cut. When desired these plates are furnished without extra charge.

The carriage is driven by a substantial friction feed works, dispensing with all gears, racks, clutches and weights. The average cost of renewing friction is about one-fifth cent per thousand shingles cut. Carriage slides are of iron planed, and adjustable to take up wear. The machine is furnished with or without jointer, as desired, and is at all times under the control of the operator, whether sawing or jointing. The sectional feed rolls are very positive in their action and so superior to ordinary fluted rolls that one or two more shingles are dropped from each block than when the teeth are in a straight line.

The machine is provided with two guards, one to prevent the carriage starting while putting in a block, the other swinging out of way when the carriage is in motion. The jointer can be run from saw arbor or detached and set in separate frame, and two persons can joint at the same time. With each machine are furnished three sets of wheels for cutting 5-11, ⅜ and ½ inch cuts, also a set of heading wheels for cutting parallel stuff from ⅛ to 1 inch thick, varying by eighths. Special wheels are supplied as ordered. The machine is made in three sizes for 36, 38 and 40 inch saws, occupies floor space 4½ by 7 feet, and requires from 10 to 12 h. p. for a cut of 10 to 20 thousand shingles per day.

The manufacturer, Mr. Madison Williams, of Port Perry, Ont., will be pleased to give further particulars to interested persons.

All lumber manufacturers in Ontario interested in the formation of an active lumbermen's association should attend the meeting in Toronto on April 7th. See advertisement on another page.

# WOOD PULP DEPARTMENT

## THE BRITISH WOOD PULP MARKET.

Mechanical pulp makers have been greatly exercised lately owing to the alleged endeavors of certain speculators to corner the market, to cover their "bear" sales, says Wood Pulp, of London, Eng. Norwegian makers have been frightened by their inability to place their output freely at the high prices they have hitherto demanded. We can, however, see no reason for any slump in prices. On the contrary, owing to the exceedingly mild winter, there has been difficulty in bringing forward supplies of wood, and prices for timber should therefore be higher. We have warned Scandinavian makers repeatedly of the large quantity of pulp coming from America, but after all, this has its limits, and should the now strained relations between America and Spain reach the breaking point, there can be no doubt the consequences will be widespread. Our advice, therefore, to sellers is now, as it ever has been, don't hold out for the highest price, but sell as soon as you see a reasonable margin of profit. "Live and let live" is a good maxim.

With regard to sulphite this has also been affected by the mild winter, as there has been absolutely no stoppage of inland communication, and owing to the exceptionally late closing by ice of the Baltic, supplies from that district were shipped as late as January. The weather has, however, now changed, and it is therefore expected that the opening of navigation will be later than usual. We hear a good deal about sulphites being offered at low prices, but on investigation cannot find that any large quantities have changed hands.

The market, however, is certainly dull, and we generally find that when this is the case, small buyers become frightened, and pressing for sales through various agencies tend to lower the market without any actual business having been effected. Prices, notwithstanding, keep firm, with the exception of those for some low quality pulps and American consignments.

There is little spot soda pulp offering, and prices are firm, owing to the fact that the bulk of this year's pulp has already been disposed of. We regret, however, to hear that some makers are already trying to effect sales for next year, but this we think bad policy, and quite unnecessary, as no new soda mills have come into existence, and we can hear of only slight increases in the output of existing ones. Esparto, however, has never been so low before, and this will not tend to raise prices.

## PULP NOTES.

The town of Woodstock, N.B., is desirous of interesting capitalists in its advantages for pulp making.

The World's Paper Trade Review records the arrival at British ports of large quantities of American and Canadian wood pulp.

The Takush Harbor Lumber Company Vancouver, B.C., is considering the establishment of paper and pulp mills on an extensive scale.

A correspondent of the Truro, N.S., News states that the East River, Sheet Harbor, saw mill is to be replaced by a pulp mill, with four grinders.

Frederick Bonney is erecting a paper mill in Ottawa. The paper will eventually be manufactured from sawdust, but for the present pulp-wood will be used.

Mr. G. O. S. Conway, of Stonefield, is organizing a company to develop a water power at Grenville, Que. The scheme includes the erection of a pulp mill.

Messrs. Drysdale & McInnis, representing a syndicate, have made a proposition to the town of Dartmouth, N.S., to establish a paper and pulp mill to employ from 200 to 300 men. The town council has been asked to exempt the works from taxation for 50 years, and has offered exemption for 30 years, which will probably be accepted by the syndicate. The company propose to manufacture chemical pulp, to be consumed in its own paper mill. The capacity, 20 tons per day, would require 15,000 cords of spruce wood, 8,000 tons of sulphur and 1,000 tons of limestone per annum.

# LUMBERMAN'S ASSOCIATION OF ONTARIO

Secretary's Office,
74 Freehold Loan Building,
Toronto, 23rd March, 1898.

The adjourned Annual Meeting of The Lumberman's Association of Ontario will be held in the

BOARD OF TRADE ROOMS, TORONTO,

on

**Thursday, 7th Day of April, 1898, at 10:30 a.m.**

At the Annual Meeting held here on Tuesday, March 22nd, a committee was appointed, composed of the following gentlemen, John Bertram, John Waldie, C. D Warren, R. Laidlaw and J. B. Miller, to revise the constitution of the Association and to report to the adjourned meeting on the 7th April.

## NOTICE

is hereby given that the conststution will be amended or replaced by a new one at this meeting

All interested in the manufacture of lumber or holding timber licenses are invited to attend, and if not already members, then to join the Association.

As there are many matters of importance to all lumbermen likely to arise in the near future, it is hoped that there will be a full attendance, and that the Association will once more be placed on a sound footing and in a position to conserve the interests of the lumber manufacturing trade of Ontario.

J. B. MILLER,
Secretary-Treasurer.

**FELTS FOR PULP MILLS** 20 years in the business — the first to make Felts in Canada; capacity 1,000 lbs. per day. All our Felts are woven endless, without a splice. Our Felts will last longer and make dryer Pulp. All up-to-date mills use our Felts. New mills, when in need, write for samples and prices.

# OAK TANNED BELTING

TORONTO
20 FRONT ST EAST
TELEPHONE 475

THE J.C.McLAREN BELTING Co MONTREAL

It is said that a pulp mill will be erected at Victoriaville, Que., by Hon. R. R. Dobell, of Quebec, and Mr. Panneton, of Three Rivers. They ask a bonus of $25,000 from the town after they have spent $250,000 upon the undertaking.

In his annual report, Secretary Barrett, of the Minnesota Forestry Association, says: "Pulp men concede that no other substance, as yet discovered, is equal to spruce as a basic fibre for white paper. Their pulp and paper mills consume fully 65 per cent. of all the spruce trees in the United States. Standing spruce in Minnesota is officially reported at 1,050,000,000 feet. It is questionable whether our cut for pulp and other purposes is proportional to that of some States in the east, where the manufacture is more concentrated. To avert a pending famine of the raw material, different companies are buying up large tracts of cut-over and abandoned lands to raise spruces from seeds and seedlings.'

Patent Shingle Machine

The Sault St. Marie Paper & Pulp Co., of Sault Ste. Marie, Ont., recently shipped eight cars of wood pulp to Marseilles, France. It is said that the pulp will be used in the manufacture of artificial silk.

The British Columbia Pulp & Paper Mills Co. has been incorporated, with a capital of $250,000. The company is composed of Glasgow capitalists, including W. S. Workman and Geo. Smith, jr., ship owners, and Robert D. Findlay, stock broker. The object of the company is stated to be to enter into an agreement with Mrs. Josephine Carmichael, of Victoria, to carry on business as manufacturers of paper, wood pulp, wood meal, etc. The Glasgow office is at 48 West Regent street.

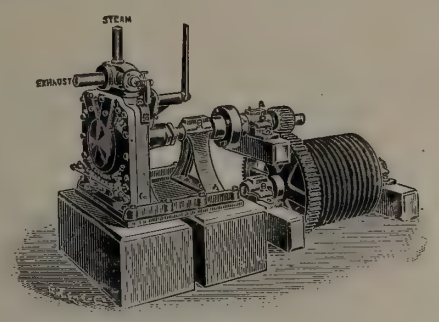
# DAKE STEAM FEED



Embodies the following Advantages:

SIMPLICITY OF CONSTRUCTION,
POSITIVE AND EASY MANAGEMENT,
ECONOMICAL USE OF STEAM,
SMALL SPACE OCCUPIED,
CHEAPNESS,
EASY ADAPTATION TO EITHER NEW MILLS OR THOSE NOW IN USE.

The movement of the engine in either direction is under the absolute control of the sawyer, thus accommodating the speed of the feed to the size of the logs.

Mill men who have used other makes of Steam Feeds comment favorably on the economical use of steam of our feed over others.

Write for Catalogue and full particulars.

## CROWN LANDS OF ONTARIO.

THE annual report of the Commissioner of Crown Lands for Ontario, recently issued, states that the total revenue from woods and forests for the fiscal year of 1897 amounted to $1,327,140.08. Of this $190,918.90 was on account of bonuses and $54,166.62 on account of ground rent, leaving the net revenue from timber dues, etc., $1,082,054.56.

The revenue from timber dues was larger than was expected at the beginning of the year. The accounts for timber dues accrue due in the month of December subsequent to the winter in which the cutting takes place, and are paid more or less promptly, according to the condition of the trade. The output of saw logs, etc., for the winter of 1895-96 was the largest in the history of the province, representing the sum of over one million dollars for timber dues alone. These dues did not become payable until December, 1896, and a considerable portion of them would not be paid until the year 1897. Owing to the continued depression in the lumber trade and the uncertainty prevailing as to the re-imposition of an import duty on sawn lumber passing into the United States, it was expected that payments would not be made so freely and punctual as usual; consequently the estimate of revenue from woods and forests was not increased in proportion to the large increase in accruals. When it became evident that an import duty would be imposed on lumber passing into the United States, heavy purchases were made for that market, and some of our own lumbermen shipped their lumber over there and piled it up, this action being taken in advance of tariff legislation, the object in both cases being to escape the duty. The sales improved the financial position and consequently larger payments were made than was looked for, the result of which has been the increased revenue collected from timber dues.

TIMBER COVE NEAR QUEBEC.

For some time past, says the commissioner, there has been considerable excitement over the discovery of gold in the region lying north and east of Lake Wahnapitae, and large numbers of prospectors and miners had flocked into the townships of Kelly, Davis, Rathbun and Scadding. These men had spent considerable money in developing the prospects which they had discovered, and in order to render them valuable and make sale of them they had been pressing the department for title. The department had been averse to opening these townships for sale, lease or settlement because the pine timber had not been sold, and it was feared that in clearing, etc., fire would be used to such an extent that bush fires would certainly ensue and the pine timber would be destroyed. Early last spring the department was very strongly pressed to allow titles to issue, and so pronounced did the feeling become that threats were made through the press and in correspondence and otherwise that if the timber stood in the way of the opening up of the townships it would be burned up. In view of these facts and of the presence of such an army of prospectors as had rushed in, the position became acute and the department reluctantly concluded that it would be necessary to sell the timber in order to realize the bonus, put the timber under license, and then place on the shoulders of those who would buy it the responsibility of watching it and cutting from time to time whatever quantity might be damaged or was in danger. This course it was felt would relieve the intense feeling prevailing in the locality. The sale was held on the 17th of August last, and 280 miles were offered for sale, of which 159¼ were sold for $265,162.50, or an average bonus of $1,665.07 per square mile. Considering the quantity of pine on the limits and its character, the showing was as good a one, so far as the price was concerned, as any previous one.

### STATEMENT OF TIMBER CUT.

The area covered by timber license is 16,400 acres. Following is a comparative statement of the principal kinds of timber cut during 1896-97:

| | |
|---|---|
| Pine saw logs | 477 716,448 feet B M. |
| Other saw logs | 8,758,716 " " |
| Boom and dimension timber, pine | 26,084,737 " " |
| " " " " other | 706,860 " " |
| Square timber, white pine | 1,977,400 cubic feet. |
| " " birch, ash, oak | 28,000 " " |
| Cedar | 254,144 lineal feet. |
| Railway ties | 278,955 pieces. |
| Telegraph poles | 593 " |
| Stave and shingle bolts | 1,466 cords. |
| West India staves | 7,700 feet. |
| Pulp wood | 46,338 cords. |

By surveys made it was ascertained that there were to be found, in the township of Burwash, Nipissing district, white pine, red pine, balsam, spruce, cedar, tamarac, birch, poplar, maple, oak, black ash and elm, the last three in small quantities; in township of Cherriman, small poplar, birch spruce and balsam; in township of Jennings, second growth poplar, birch, spruce, tamarac and pitch pine on the high lands, and willow and alder on the low; in township of London, scattered white pine, small poplar and pitch pine; in township of Curtis, district of Algoma, cedar, tamarac, maple, birch, balsam and spruce, the latter found in large quantities suitable for pulp wood; in township of Harrow, small jack pine, white birch, poplar, maple, beech and hemlock; in eastern part of township of Tupper, bird's eye maple, white and black birch, with small quantities of balsam and spruce; in township of Sanford, spruce, tamarac and small pine; in township of Zealand, Rainy River district, poplar, spruce, birch and cedar.

---

All the lumber mills in Washington are now running full time, and the increase in output will be greatly in excess of last year. During the past two months the shipments of lumber amounted to 1,050 carloads, against 780 for the same period last year. The shipments of cedar shingles during two months were over 1,200 carloads. The Alaskan demand for lumber is great, over 10,000,000 feet having been shipped this spring.

## LUMBERMEN'S ASSOCIATION OF ONTARIO.

NEW CONSTITUTION ADOPTED AND OFFICERS ELECTED. CHANGES IN THE CANADIAN LUMBER TARIFF ASKED FOR.

IN accordance with a resolution passed at the annual meeting on Tuesday, March 22nd, the Lumbermen's Association of Ontario convened in the Board of Trade building, Toronto, on Thursday, April 7th, to receive the report of the committee appointed to revise the constitution.

In the absence of the president, Mr. A. H. Campbell, sr., Mr. James Scott was voted to the chair, Mr. J. B. Miller acting as secretary. Among the members present were the following: John Bertram, Collins Inlet Lumber Co.; James Scott, Georgian Bay Lumber Co.; A. H. Campbell, jun., Muskoka Mill & Lumber Co., Toronto; T. Conlon, Thorold; John Waldie, Victoria Harbor Lumber Co.; J. B. Miller, Parry Sound Lumber Co.; C. Beck, C. Beck Manufacturing Co., Penetanguishene; N. Dyment, Mickle, Dyment & Co., Barrie; R. Cook, South River Lumber Co.; W. A. Charlton, M.P.P., Lynedoch; and C. H. Clark, Toronto.

The following new members were elected: Wm. B. Toner, of Toner & Gregory, Collingwood; T. A. Pickard, Pickard & Rowan, Owen Sound; Wm. Milne, Milne & Hefferman, Trout Creek.

The secretary read the minutes of last meeting, which, on motion of Mr. Beck, were adopted.

The committee appointed to revise the constitution presented its report, each clause being read and considered separately. The first and second clauses brought up the question whether the association should include dealers, the final decision being against their admission. It was pointed out that persons engaged in making board timber would be eligible for membership, and that there might also be a separate hardwood section.

Clause 5, relating to the annual fee, created an animated discussion, the result being that the fee for the first year of membership was placed at $5, and for each succeeding year at $2.

The constitution, as finally adopted, is as follows:

CONSTITUTION.

1st. The object of the Association shall be to promote the interests and conserve the rights of those engaged in lumbering operations or in the manufacture of lumber, to hold meetings of the members for the consideration and discussion of questions affecting those interests, and by union and co-operation to build up and foster the lumber business.

2nd. Any person engaged in lumbering, in the manufacture of lumber, or holding timber lands in the province of Ontario, shall be eligible for membership.

3rd. Any person desirous of becoming a member of the Association may make application to the Secretary, and on payment of the proper fee shall immediately become a member of this Association, subject to the approval of a majority of the members present at the next special or general meeting.

4th. No member shall vote at any meeting of the Association who has not paid his fees, but when a member of the Association, who is entitled to vote, but is not present at a meeting, belongs to a corporation or firm, he may be represented by an officer of that corporation or a member of that firm.

5th. A fee of $5.00 shall be paid by all members on their joining or being elected to the Association, and an annual fee of two dollars thereafter on the first day of January of each year.

6th. Any member who may wish to withdraw from the Association may do so by giving notice to the Secretary and paying up his subscription to the expiration of the year then current, together with all arrears.

7th. The affairs of the Association shall be managed by a board of ten members elected at the annual general meeting of the Association, and who shall hold office for one year or until their successors are appointed. The board shall meet at such time and place, and so often as they may be called together by the President, or on the requisition of three members of the board, by giving five days' notice thereof, and stating the purpose for which the meeting is called.

8th. At the first meeting of the Board of Management in each year, a president, first vice-president and second vice-president shall be elected, who shall hold office for one year, or until their successors are appointed, and a secretary and treasurer, who need not necessarily be a member of the Association. The secretary and treasurer's remuneration and amount of security to be given by him shall be fixed by the Board.

9th. The annual general meeting of the Association shall be held in the city of Toronto, at such hour on such day in the month of February as the Board of Management shall decide, and notice thereof shall be sent to each member at his registered address at least ten days before the day fixed for such meeting.

10th. The Board of Management shall have power to call special and general meetings at such times as they see fit, the object for which the meeting is called to be stated in the circular convening the same.

11th. Seven members present shall constitute a quorum for the transaction of business at all meetings of the Association, four at meetings of the Board of Management, and three at all meetings of committees.

12th. In the event of any dispute as to the intent or meaning of any of the sections of this constitution, or of any by-law which may hereafter be made, the interpretation by the Board of Management shall be final and conclusive.

13th. The constitution and any amendments thereto which hereafter may be made may be altered by a two-thirds vote of the members present at any special or general meeting of the Association called for that purpose.

14th. The Board of Management shall have power to frame by-laws for the carrying on of the work of the Association, which shall be in force until the next general or special meeting of the Association, when they shall be submitted, and if not confirmed by a majority of the members present, shall cease from that date to have any validity.

The secretary read the report of a committee of the association which recently met a deputation of western lumbermen to discuss the question of an import duty. This report, on motion of Mr. Bertram, was adopted.

ELECTION OF OFFICERS.

The association then elected the following Board of Management: James Scott, John Bertram, John Waldie, J. B. Miller, Toronto; W. A. Charlton, M. P. P., Lynedoch; N. Dyment, Barrie; Chas. Beck, Penetang; W. C. Edwards, M. P., Ottawa; Thos. Conlon, Thorold; R. Cook, South River. Subsequently John Bertram was chosen president, Jas. Scott first vice-president, and W. C. Edwards, M.P., second vice-president, the Board of Management appointing W. B. Tindall secretary-treasurer.

Mr. Beck read a series of resolutions which had been adopted at a mass meeting of the citizens of Penetanguishene, favoring an import duty on lumber.

It was moved by Mr. Waldie that the communication be received, and that the association approve of the general principle that they favor an import duty of $2 a thousand on lumber, 30 cents on shingles, and 25 cents on laths—a duty corresponding to the American tariff. A committee, consisting of Messrs. Bertram, Campbell, Charlton, Scott and Miller, was appointed to draft a resolution on the above lines, for presentation to the government, setting forth also that the lumbermen only wished to meet duty with duty, and that they were willing to give free lumber and logs for free lumber.

Mr. Beck brought forward another grievance which Canadian lumbermen had to contend with. He stated that both British and American tugs towing logs from Canada to American mills were allowed to bring in large loads of coal in bond and dump it on the Canadian shore, and then come back and get this coal again, no duty being charged, whereas the Canadian tugs, towing to Canadian mills, had to pay a duty of 60 cents per ton on coal brought in from the United States. On motion of Mr. Waldie, the Board of Management was instructed to investigate the matter, and draw the attention of the government to the injustice.

The import duty question was again opened by Mr. Conlon, who expressed a fear that unless further action was taken the changes asked for in the tariff would not be granted. The secretary here read a letter from Messrs. G. & I. Prescott, of Albert, N. B., heartily endorsing the action of the association and expressing regret that the lumbermen of the maritime provinces had no organization.

The meeting then adjourned, and re-assembled in the afternoon, when by-laws were adopted and other routine business transacted.

TARIFF CHANGES.

In accordance with the resolution passed at this meeting, the Executive Committee has forwarded to the Dominion government a memorial asking for certain amendments in the Canadian tariff. These amendments make the clauses read as follows:

CLAUSE 328.—Sawed or split boards, planks, deals, pine and spruce clapboards, lumber and timber hewn or sawed, creosoted, vulcanized or treated by any preserving process, planed and dressed on one or both sides, manufactured lumber and timber not elsewhere specified, $2.00 per M. feet B.M.

CLAUSE 329.—Laths, pickets, palings, shingles of wood, staves not listed or jointed of wood of all kinds, firewood, handle, heading, stave and shingle bolts, hop poles, fence posts, paving posts, railroad ties, telephone, trolley, electric light and telegraph poles of cedar or other woods, 20 per cent. ad valorem.

CLAUSE 611.—Free goods: Timber or lumber of wood, viz., lumber and timber, planks and boards of amaranth, cocoboral, boxwood, cherry, chestnut, walnut, gumwood, mahogany, rosewood, sandalwood, sycamore, Spanish cedar, oak, hickory, whitewood, African teak, black heart ebony, lignum vitæ, red cedar, redwood, satinwood and white ash, when not otherwise manufactured than rough sawn or split or creosoted, vulcanized or treated by any other preserving process; hubs for wheels, last blocks, wagon, oar, gun, heading and all like blocks or sticks, rough hewn or sawed only; felloes of hickory wood, rough sawn to shape only, or rough sawn and bent to shape, not planed, smoothed or otherwise manufactured; hickory billets and hickory lumber sawn to shape for spokes of wheels, but not further manufactured; hickory spokes, rough turned, not tenoned, mitred, throated, faced, sized, cut to length, round tenoned or polished; the wood of the persimmon and dogwood trees; logs and round unmanufactured timber, ship timber or ship planking, not specially enumerated or provided for in this Act.

---

Mr. A. J. Burton, formerly of Cape Breton, has recently returned to Canada from Massonville, Pa., and has taken charge of the filing and hammering of the band saws in Gilmour & Co.'s mill at Canoe Lake, Ont. Mr. Burton is not unknown to his present employers, having filed for them one season at the Trenton mills a few years ago. He has had eleven years' experience as a band filer, and is known by mill men to be one of the best filers in the country, having made some good records. An article from his pen on "The Care of Band Saws" appears on another page.

## OBITUARY.

A. M. BURGESS.

The late Alexander Mackinnon Burgess, Commissioner of Dominion Lands, whose death took place at Ottawa on February 26th last, was a well known and most esteemed personage. He was perhaps best known throughout the country at large as the efficient deputy head of the Department of Interior for a period of fourteen

The Late A. M. Burgess.

years preceding the advent of the present government.

Mr. Burgess was born at Strathspey, Invernesshire, Scotland, on the 21st of October, 1850. and was educated at the parish school of Advie, at the grammar school of Aberdeen, and at the University of Aberdeen. He did not graduate at the university, but came to Canada at the age of 21, possessed of a solid education, which fitted him for any career in which he might choose to enter. The career he selected was that of journalism, and one of his earliest engagements was as reporter on the staff of the Toronto Globe. He was not only an expert stenographer, but a facile and vigorous writer; and he soon began to make his mark in his profession. He reported for the Globe at Ottawa from 1872 to 1874, when he became editor and subsequently proprietor of the Ottawa Times.

In the year 1876 Mr. Burgess accepted the position of private secretary to the Hon. David Mills, then Minister of the Interior in the government of the Hon. Alexander Mackenzie, and thus entered upon the official career in which he was destined to achieve such distinguished success. Remaining in the Department of the Interior after the defeat of the Reform government in 1878, he was promoted four years later to the position of secretary, and in the following year to that of deputy. For some time after the formation of the present government Mr. Burgess continued to hold his office as deputy, under the Hon. R. W. Scott, as acting minister; but shortly after the advent to office of the Hon. Mr. Sifton, he was assigned, without change of salary, to the position of Commissioner of Dominion Lands.

The Ottawa citizen thus refers to Mr. Burgess: No one who knew the late Mr. Burgess will dispute the statement that he was one of the most interesting figures that have appeared on the official scene in this country during the last twenty-five years. He was naturally a man of strong constitution and unbounded vigor, with an active, enquiring mind and great capacity for work. One of his chief gifts was a remarkable memory, whice served him in good stead in conducting a department, the work of which embraced an infinity of detail. The several ministers under whom he served as deputy head prior to the advent of the present government, received from him assistance of the very greatest value through the comprehensive and intelligent knowledge which he possessed of nearly every subject that was referred to in the departmental files; and it is doubtful whether the services of any deputy head in Canada were ever more highly appreciated than were his in the very highest quarters.

The subject of this sketch had many warm and sincere friends, and it was said of him that, in hours of social relaxation, he could drop his official duties and give forth a wonderful flow of genial spirits and of amusing anecdote and reminiscence. Mrs. Burgess and eight children survive him.

JAMES DOLLAR.

Many readers of this journal will recognize the accompanying portrait as that of James Dollar, whose death occurred at Eureka, California, on the 17th of March last, after a serious illness of only three days. Mr. Dollar had been a sufferer

The Late James Dollar.

from asthma for some time, and kidney complications set in, which caused his death.

The Dollar family were well known in Ontario, where they were highly esteemed by a host of friends. Previous to 1890 the three brothers, James, John M. and Robert, were prominently connected with the lumber trade of this province, but a few years ago they removed to the Western States. John M. purchased the Duncan and Markham mills in California, but his death took place at St. Rafæl, Cal., in October, 1892. Robert Dollar, the surviving member, is now manager of the Usal Redwood Company's interests in California.

The subject of this sketch, James Dollar, was born in 1849. He came to Canada from Scotwhen very young, and commenced operations in the woods on the Ottawa river, gradually working his way upwards. Subsequently he removed to Bracebridge, Ont., lumbering there on his own account. He became actively identified with the progress of the town, and was subsequently chosen as mayor. In the year 1892 he removed to California, and after the death of his brother John he associated himself with his brother Robert in the management of the Dollar Lumber Co.'s mills at Markhams, in Sonoma county, where he remained until the closing down of the business. With the closing down of that mill he went into lumbering in general, and about a month previous to his death he concluded a contract with McKay & Co., and went to Eureka to take charge of their large lumbering interests. On arriving there he saw the necessity of an extension of the railroad and other improvements, and although the weather was bad he was in the front rank overseeing all that was being done. His health, however, had been undermined, and in a short time he passed away.

The qualities of energy, honor and conservative management which Mr. Dollar possessed made him one of the most popular men in the large circle of lumbermen in California, as well as in Ontario. He was one of nature's noblemen, kind, affable and of an affectionate disposition. His honor and fidelity to a trust made his name one held in the highest esteem by all the community. There is in the hearts of all who knew him a profound feeling of sorrow.

## DIRECTIONS FOR BRAZING SAW BLADES.

The following directions for brazing saw blades are obtained from the 1898 catalogue of W. B. Mershon & Co., Saginaw, Mich.:

The ends of the saw blade are first prepared by filing a true taper commencing back about 5/8 of an inch from the end, and filing the saw thinner as it approaches the end, at which point it should be only the thickness of a knife edge, one end af the saw being filed from the outside and the other from the inside. This being done, the saw should be placed on the brazing table, the back edge being brought against the back of the brazing table. This forms a straight-edge, and will bring the saw blade to a straight line. Now dust some powdered borax on the under end of the saw blade, and after cleaning a piece of silver solder of the proper size, slip this between the ends on top of the borax. Dust some borax as well on the silver solder. The saw now being in proper position, the ends lapping 5/8 of an inch, the brazing iron should be slipped one over and one under the saw, and the screws adjusted so that the saw blade, when clamped, lies in a perfectly level position. Now withdraw the irons, only loosening the screws enough to allow of this and no more, heat the irons to a cherry red in a clean fire, again screw them into position and by means of the clamping screws firmly bring them to bear upon the saw blade. Leave in position until cool, when the saw may be removed and the joint dressed and hammered the same as the rest of the blade.

The Richmond Lumber Manufacturing Company, of Stephenson, B. C., has been incorporated.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## IMPORTS OF LUMBER INTO CANADA.

ACCORDING to figures published in the Northwestern Lumberman, and which appear to have been obtained from an official source, and must therefore be taken as correct, there were imported into Canada from the United States, during the year ended June 30th, 1897, over 58,000,000 feet of lumber, consisting of boards, deals and similar stock, having a valuation of $809,250. These figures do not include the manufactures of wood, such as doors, blinds, furniture, etc., which represent an import value of more than one and one-half million dollars, or, to be exact, $1,564,358.

Granting to the lumbermen and wood-workers of this country the same protection as is accorded the manufacturers of the United States, a right to which they are justly entitled, the duty of two dollars per thousand feet would practically retain the home market for Canadians, and the distribution of orders for some 58,000,000 feet, now supplied by United States manufacturers, would greatly tend to the betterment of their present position. It could scarcely be expected that such a duty would exclude all American lumber, as such stock as walnut, mahogany, whitewood and oak would continue to be imported, but in such quantities as to be a small factor in the market.

It is refreshing to observe the sentiments expressed daily in favor of the utilization of home products in preference to those of foreign manufacture, for proof of which the reader is referred to the extracts from letters of piano manufacturers appearing on another page. In this industry whitewood is gradually being replaced by native woods.

The figures, $1,564,358, as representing the value of manufactures of wood imported from the United States, show the importance of these industries, which may be classed as branches of the lumber trade, depending upon the product of the forest for their raw material. Does it not seem strange that Canada, with her vast timber resources, should import from the United States in one year manufactures of wood valued at more than one and one-half million dollars? The policy of allowing our raw materials to be exported, in many cases only to be manufactured into a finished product and shipped back to this country, is, we believe, responsible in a large measure for the position in which we find ourselves to-day.

Whether or not the Dominion government will place an import duty on lumber is, to say the least, problematical; certainly very little encouragement is found in a perusal of the budget speech, although the justice of the demands of the lumbermen in this respect is almost unanimously conceded. Replying to the financial statement, Hon. Mr. Foster expressed his regret that the government had not already taken some action to assist such an important industry. He pointed out that the present tariff arrangement was very unfair to Canadians. There is little reason to hope that any material change will be made in the near future in the United States duty on lumber; it therefore behooves our lumbermen to put forth every effort to increase the home demand, by promoting wood-working and furniture factories and similar establishments, and endeavoring to retain in Canada the two and one-half million dollars which are now sent annually to the United States.

## RE-ORGANIZATION OF THE LUMBERMEN'S ASSOCIATION.

THE Lumbermen's Association of Ontario today exists in more than name only—it is now an active organization, and we hope we will not be considered too optimistic if we predict that in the near future it will become exceedingly useful in promoting the interests of the chief industry of the province. Since the formation of the association some years ago until recently, no questions were considered of such vital importance as to demand its special attention, the natural result being that the interest of the members in the welfare of the association gradually relaxed.

The developments of the past year have shown conclusively the necessity of always having an association in working order. While the action of the Ontario government in prohibiting the export of saw-logs after May next can undoubtedly be attributed to the influence of meetings of lumbermen held in Toronto, it cannot be disputed that there has also been felt the necessity for a live provincial association. The circumstances which have necessitated prohibiting the export of saw-logs, as well as of imposing an import duty on American lumber, were the means of reviving the association. Matters of this character affect the trade in general, therefore it is to be hoped that lumbermen in every section of the province will see it to be to their interest to aid in building up the association, as a means of improving the condition of the lumber trade.

It augurs well for the immediate future of the association that its chief office is to be filled by Mr. John Bertram, a gentleman possessing in a high degree the qualifications of an efficient executive officer. In Messrs. Scott and Edwards the association have also two able vice-presidents.

A word as to the hardwood trade. There exists (as shown by letters received at this office) a strong sentiment in favor of some organization of hardwood lumbermen, whether it be in connection with the Lumbermen's Association of Ontario or as a separate body. To our mind, the formation of a separate association is the least desirable. As the existing association is intended to include manufacturers of lumber of all kinds, it would certainly be more advantageous to have one strong association than two smaller and weaker ones. It might be found desirable to form a hardwood section of the present association, and on this the CANADA LUMBERMAN solicits the views of the hardwood trade. The fee has been reduced to five dollars for the first year and two dollars for each succeeding year, the object being to secure a greatly increased membership. The secretary has issued a circular to lumbermen, requesting them to join the association, to which both hardwood and pine manufacturers should respond at once.

In a letter received previous to the recent meeting, a well-known hardwood manufacturer says:

"I hope a hardwood section will be organized, so that the entire lumber interest will be represented by this association. The hardwood men when left to themselves do not appear to be strong or energetic enough to organize for their own protection, and they are consequently forced to submit to occasional arbitrary rulings in the shape of increased freight rates of the most absurd nature. I trust you will continue to remind the lumbermen of the necessity of embracing the hardwood interests in the association."

Another correspondent of the LUMBERMAN, referring to the meeting, says:

"We are pleased to see the association re-organized, and hope that by the time we have another meeting we will have enough of the hardwood mill men interested that a few of them will attend and join our association. We think that if the association numbered hundreds instead of twenty, our voice as an association would be listened to and its influence felt, as was demonstrated last fall in reference to the export of pine logs. We would like you to drum up the hardwood mill men, and endeavor to induce them to join, as we believe there is work to be done in the interest of the hardwood trade that cannot be done by individuals nearly so well as through the association."

These and similar letters show that the movement in favor of organization is growing among the hardwood manufacturers.

## EDITORIAL NOTES.

THE Dominion Government having made a a grant of $20,000 towards a Canadian exhibit at the Paris Exposition in 1900, it may interest our readers to know what is being done by other countries. France appropriates half the available space, and has voted over $10,000,000. Germany has given $1,250,000, Russia $900,000, and Great Britain is discussing a proposed grant of $375,000. In the latter country there is a strong feeling that the proposed appropriation should be considerably increased, otherwise the British display is likely to appear inferior. As to the Dominion grant, we regret that it was not larger, and hope to see the same supplemented by substantial appropriations from each province.

A QUESTION of national interest, and which is gradually reaching the serious stage, is the exportation of hardwood lumber. There are in Canada numerous industries dependent upon hardwood lumber for their raw material, but notwithstanding the duty of two dollars, American dealers have this spring purchased nearly all the available dry stocks of several kinds of hardwoods, with the result that the local consumers have, in addition to being compelled to pay high prices, been threatened with a scarcity of raw material to keep their factories in operation. Owing to the scarcity and consequently high price of elm, the Canadian Furniture Manufacturers' Association recently advanced prices of furniture ten per cent. It is very desirable that the life of Canadian industries should be prolonged, and this action of the Furniture Manufacturers' Association is to be commended, inasmuch as mill men will naturally sell in the best market, and Canadians wanting the lumber must meet the prices of American buyers.

IN view of the war which has now been declared between Spain and the United States, by which Cuba will probably gain its independence, some figures of the Canadian trade with the Spanish Indies are interesting. Twenty-five years ago Canada exported to the Spanish West Indies goods to the value of $1,614,312, the exports being confined to fish and lumber. In 1893 New Brunswick sent sugar boxes to the value of $573,851, and general lumber to the value of $189,835. This latter trade has practically died out. We still send a little lumber to the Spanish Indies, but the sugar box trade has gone to the Southern States. For the year ending June 30th, 1897, our sales to that country amounted to only $93,309 worth of lumber. The trade in lumber is said to be capable of considerable expansion, and with the removal of the Spanish duties, it is probable that more of our lumber could be marketed there. Should Cuba be taken possession of by the United States, which is not altogether improbable, notwithstanding the avowed pledge of Congress that all that is sought is its independence, the Dingley tariff would simply replace the Spanish tariff.

IF the charges of careless manufacture made against Canadian lumber by foreign consignees can be substantiated, there is vast room for improvement in the methods employed by some of our mill men. Notwithstanding the warnings that have been given, shipments continue to be sent to foreign countries in such shape as to greatly injure the prospects of future business. Here is what Mr. J. S. Larke, Commissioner for Australia, says of a recent shipment: "A cargo of lumber from British Columbia, the North Riding, arrived this month. There is a claim on this, as on every cargo that has arrived this year. This timber was of good quality, but the charge is that some of it is badly cut. I did not see the rejected timber, as it had been removed when I visited the ship. I was told that there was a difference of half an inch in the sizes of the ends and centres of some of the sticks. As much of this timber is re-sawn, this irregularity materially affects the value. The battens are said to be of varying thickness. As these battens are used for slate roofs, a varying thickness is liable to break the slates. The British Columbia timber trade to this port must have been a losing one this year, and must continue to be so as long as it is conducted on the present lines. As the steamers are filled with cargo that pays better, they now carry no dressed spruce, and the trade is largely lost." A word to the wise is sufficient.

ARRANGEMENTS are well under way for the holding of what is termed a Greater Britain Exhibition at Earl's Court, London, next year, lasting from May until October. The undertaking, which is under the direction and management of the London Exhibitions, Limited, a company form in 1894, and having a paid-up capital of £145,000, is receiving the approval and support of the Marquis of Lorne, Sir Charles Tupper, and other distinguished British and Colonial statesmen. The object, which is to bring together the products of the various parts of the British Empire, should commend itself to all who wish for a closer commercial relationship between Great Britain and her colonies. The Canadian government will be asked to grant an appropriation to cover the cost of a Canadian exhibit. Attention is called to the fact that exhibits intended for the Paris Exhibition of 1900 might with advantage and little additional cost be first shown at the London Exhibition. In view of the prevailing sentiment on both sides of the water in favor of closer trade relations, Canada should take advantage of every opportunity to make known her resources.

## CONSUMPTION OF LUMBER IN THE MANUFACTURE OF PIANOS.

WITH the object of learning the quantity of lumber consumed in the manufacture of pianos in Canada, and the extent to which foreign woods were being used, a letter was addressed by the publisher of the CANADA LUMBERMAN to each manufacturer, asking for the necessary information. Of the forty or more piano manufacturers throughout the Dominion only ten responded to our inquiries. From the data furnished, however, a fair estimate of the total consumption may be made.

According to the figures given, there were consumed by these ten manufacturers during the year 1897 in the neighborhood of 3,000,000 feet of all kinds of lumber. Of this amount about 400,000 feet was whitewood from the United States, 350,000 feet mahogany and walnut, and the balance chiefly Canadian woods. Allowing a proportionate consumption by the Canadian manufacturers who did not respond, it gives a total of 12,000,000 feet of lumber consumed annually in the manufacture of pianos in Canada, 1,600,000 feet being whitewood and 1,450,000 feet mahogany and walnut. Nearly all the Canadian woods are used to a more or less extent.

It would appear that whitewood is not now used as extensively in the manufacture of pianos as in former years, owing to the growing desire to patronize home industries. The following extracts from six letters received will doubtless be read with interest:

"In reply to your favor re. lumber, we would say that we now use very little whitewood in our factory, having substituted therefor mostly birch and basswood."

"All our cases being veneered, we have little use for whitewood. Ash is cheaper and a better wood to veneer on."

"In reply to your favor of the 11th inst., would say, the only American woods we use now are whitewood and walnut, and we are using less of the whitewood than formerly, and use almost exclusively the Canadian lumber."

"Replying to your inquiry regarding prospects of American manufacturers selling certain kinds of lumber in Canada, we beg to say that the policy of this concern is to buy nothing from the Americans that we can do without. We have cast about for substitutes for whitewood, and are now using none of it, having succeeded in getting a substitute that serves even a better purpose, and in the lumber or wood line we are now buying nothing outside of Canada except the foreign fancy wood veneers. The principle we go on in this respect is that our finished product is shut out of their country by a high tariff, and their finished product in the way of lumber we will not accept. This may be retaliation of a puny kind, but it is our way of looking at the matter, and we are the parties who are 'paying the piper' and have a right to indulge in our fancy for this kind of thing. We follow the same policy for all other kinds of supplies."

"We may say that during the past few years we have adopted the use of whitewood very largely in place of pine; that is, in the better qualities of pine. We found it difficult to secure a quality of pine that was free from defects, consequently we commenced the use of whitewood, and have found it a very satisfactory kind of wood for our manufacturing, as it is absolutely free from shake and other defects, and we have also found that a good quality of whitewood can be delivered here, freight paid, quality considered, at a less figure than we can procure pine for, and I have no doubt that even where parties have been using pine, if they were to test the use of whitewood for the same purposes for which they use pine, they would at once see the advantages and economy in the use of whitewood."

"About the only lumber I get from the United States is walnut, usually culls and rejects, as the better grades are in so great demand for European trade that it puts the price beyond the reach of piano and organ manufacturers, especially at the price the goods have to be sold at. I have been quite successful in the cheaper grades of goods in substituting birch for walnut. With good stain it is difficult to detect the difference. I use but little whitewood to veneer on; basswood answers as well, and what is still better is the fine grained soft ash, which takes the glue better and is less liable to warp if properly dried. Whitewood is largely used to make a cheap grade of case work to stain, but to my mind soft maple is superior, as it takes the stain better and the wood is less affected by the weather. There is a good demand for whitewood cut from 1/8" to 1/4" thick, and glued up in three thicknesses, the centre with grain crossways. The demand for this kind of lumber is increasing, and if an enterprise of this kind should be started to cut basswood, cutting it around the log to dimension sizes and glueing it up all ready for use, putting the price where it could be used to advantage, the demand would be great. I am aware that basswood is cut in that way to some extent in Canada at present, but not to the extent to make the price so low that it can be used to advantage; in fact, it pays better to send to the United States and get whitewood, where whitewood is worth from $25 to $40 per M, while basswood can be had here at $10. Quarter-cut oak is in good demand, and the consumption will be greatly increased."

## LUMBERING OPERATIONS IN NOVA SCOTIA.

[By a Travelling Correspondent]

LUMBERMEN generally say that the past winter has been exceptionally good for logging, and so far stream driving is all that could be desired. While there has been no heavy rains, the snow has melted just fast enough to keep water up to a good driving head, and the prospects are that all the logs cut will be got into the ponds.

Prices, however, are no better than a month ago, while freight rates have stiffened somewhat, which, together with the great probability of war at present writing, is anything but encouraging for the lumbermen. Stocks of lath have been pretty well cleared out, advantage being taken of the fair prices going in New York and Boston early in the spring. Those who were situated so they could ship when the demand began realized fairly satisfactory prices, the late shipments not faring so well as regards price.

Just what effect the Spanish-American war may have on lumber prices remains to be seen. Some new markets are being tested by maritime lumber merchants, and it is to be hoped that the results may prove satisfactory; care will need to be exercised in sawing to exact specifications and making the product conform to the requirements of the different markets. Their motto should be—until they get a foothold at least—"Quality, not quantity."

The Newville Lumber Co., Newville, Cumberland Co., N.S., took out four million feet last winter, which, with one and a half million carried over, gives them ample stock for their requirements. They have made considerable improvements in their saw mill. Mr. W. W. Block, of Amherst, is the manager, and Mr. Henderson millwright and filer. Mr. Harvey McAleese has charge of the company's office and wharf at Parrsboro.

T. G. McMullen & Co., Truro, N. S., will saw about eight million feet in their band saw mill at Hartville on the Dominion Atlantic Railway, and will have about twelve million feet sawn in their several portable mills at different places in Colchester, Pictou and Hants counties.

Alfred Dickie, Stewiake, has at his steam gang and rotary mill at Dickie's Mill Siding about two million feet, which was landed there by people who had small lots of timber, and which is being sawn before his drive comes down river. This drive contains over eleven million feet, and is safe in the main river and reported to be coming along splendidly. Another week will put it in the boom at the mill. The capacity of the mill, sawing deals, averaged last year about seventy thousand feet per day, but quality is the consideration with Mr. Dickie this year rather than quantity. Mr. John A. Gillis is manager of Mr. Dickie's mill and lumber interests in Eastern Nova Scotia, and is a very capable man. Mr. Dan. Gillis is clerk, W. Killam mill-wright, and Mr. Thompson filer, and when the remark is made that they are all New Brunswickers it is clear evidence that Mr. Dickie understands the selection of men to carry on his business successfully. Mr. Dickie will also have eight million feet sawn by portable mills, making a total of twenty-one million feet.

Lantz & Co., Milford, will saw about one million feet; they saw dimension lumber for Halifax and local markets principally, and have a portable mill at Elmsdale, which they run in winter, sawing about one million feet of spruce and hardwood deals.

Young Bros. & Co., Limited, St. Margaret's Bay, will have eight million feet in pond ready to saw. They did not intend getting out so much, but the winter was so favorable that they had either to work half time or discharge their men, and as neither of the alternatives is good business, they kept on. Mr. B. F. Young, president of the company, resides at St. Margaret's Bay. Their mill there is steam power, and consists of gang, rotary, lath, shingle and planing machines. Last year they operated only the gang. Mr. D. P. Young resides at Ingram River, six miles further west, where a large part of their operations are carried on, and where they intend building a large mill in a year or so, to which can be rafted logs from all the streams running through their large lumber property. They also got out a larger quantity of piling and pulp wood during the winter.

The Gold River Lumber Co., Gold River, will saw about three million feet, principally English deals. They also saw lath and shingles and plane lumber for markets requiring it.

E. D. Davidson & Sons, Limited, are getting their usual cut, ranging from twelve to fifteen million feet. Mr. Frank Davidson, the president of the company, has just returned from a visit to the English and Continental markets. Besides two large gang mills at Bridgewater, the company have a fine gang and rotary mill at Alpena Station, on the Central Railroad, the product of which is shipped to Bridgewater or Lunenburg, as required, for shipment abroad.

J. & J. Coop, Milton, will saw about seven hundred and fifty thousand feet. They put in a plant for sawing and barking pulp wood during the winter, and are now busy sawing for the Acadia Pulp Co. at Milton. The blocks are taken to the steam tram road at Liverpool and then to pulp mill about four miles up river.

Harlow & Kempton, Milton, will saw about four million feet during the year. They have improved their mill considerably the past year, putting in new water wheels and adding some machinery and labor saving appliances. The firm also operate a sash and door factory.

Eldred Minard & Son, Milton, will saw about one million feet for Colp Bros.

John Millard, Liverpool, has a gang and rotary mill and planer at Milton. He has about five million feet to saw. Mr. Millard also has a sash and door factory at Liverpool, where he carries on a large business in that line, besides shipbuilding, having a fine vessel on the stocks at present.

Henry L. Tupper, Milton, has a fine water power gang mill, planer and box making machinery. He expects to saw about four million feet during the season, principally boards.

Allan T. Freeman, Milton, merchant and mill owner, will saw about three quarters of a million feet of pine for West India market. Ira P. Freeman will saw about a million feet.

The Acadia Pulp Company, Milton, are using a large quantity of lumber in their business. They have about double their capacity and expect soon to be able to turn out seventy tons of pulp each twenty-four hours. The pulp is taken from the mill to the company's warehouse at Liverpool by the Liverpool and Milton Steam Tram Railway—four miles—then sent by schooner to any place required. One large steamer loaded part cargo at Port Medway already this season, the pulp being supplied by the Acadia and the Nova Scotia Pulp Companies, Mill Village.

T. G. Nicol, Port Joli, will saw about one million feet at Mitchell Brook. He has a steam portable mill sawing and has also a water power lath and stave mill.

Frank G. Nicol, Granite Village, will saw about three quarters of a million feet in his water power rotary mill.

Hastings W. Freeman, Jordan River, is operating on a large scale, getting about five million feet of lumber, spruce and pine. The spruce is to be sawn into deals and the pine into boards for West India market. The drive at present time of writing is safe, as without freshets enough water is held in reserve in locks to run them to mill. Mr. Freeman completely remodelled his mill after close of last season, putting in a fine rotary outfit made by the Burrell-Johnson Iron Co., Yarmouth. Important improvements were also made in the gang, two new water wheels, manufactured and set in place by Duncan Buchannan, of Apohaqui, N. B., being added. During last season Mr. Freeman bought the large lumber and mill property adjoining his own from the Doull & Miller Estate, Halifax, and now has a very valuable lumber property.

Bower Bros., Shelburne, will saw a half million feet. They also manufacture dories for the fishermen and have established a very fine busines in that line during the past two years. James R. Bower, same place, has a steam power rotary mill, and also makes shingles, barrel staves and heading, boat and dory timbers, band sawing, planing and a full line of house furnishings.

J. M. & J. A. McKay, Clyde River, have a water power saw mill and will saw this season about one and one quarter million feet. There is some talk of shipbuilding being revived at Port Clyde, four miles distant.

Dickie & McGrath, Tusket, have eight million feet of pine and spruce, and the prospect is good for their whole drive reaching the booms at mill in good time. Mr. McGrath, the manager of the concern, keeps his eyes open for any improvements in saw mill practice. During the winter he installed the patent log haul up and live bed, which works like a charm; it was made by the Waring-White Co., of St. John, N.B. A steam jump up saw cuts the logs to length. So much machinery has been added that the engine has all it can do, so Mr. McGrath is attaching a 24 x 24" cylinder and making a tandem compound. The mill consists of steam feed rotary, patent edger, live rolls and transfers, lath, box and planing machinery, sawdust carriers taking all dust to the furnace, and chain carrier taking all bark, edgings and refuse generally to a safe distance from mill to be burned. Mr. Dickie, of the firm, resides at Stewiacke, where he has large lumber interests.

Blackadars & Co., Methegan and Hectanooga, have a water power gang at the former place, in which they will saw three million feet, and a steam rotary mill at the latter place, where they will cut two million feet. They saw mostly for West India and South America.

W. J. P.

## CURIOUS GROWTH IN A TREE.

THE accompanying illustration represents a stick of birch in the possession of Mr. J. E. T. Armstrong, of Parry Sound, Ont., which was cut out of a living tree. The stick is 30 inches long, 11 inches wide and 4 inches

thick. The two pieces shown in the illustration fit together perfectly, the teeth engaging with each other like a dove-tail joint. It is regarded as a most remarkable freak of nature. The photo was taken by Mr. Armstrong.

## THE TIMBER TRADE OF THE UNITED STATES.

THE figures given below of the imports and exports of forest products will show the importance of the timber trade of the United States. For the year ending June 30th, 1860, the exports of forest products were valued at $10,209,959. Twenty years later they had reached $17,321,268, while last year they were valued at $40,489,321, this being an increase of nearly $7,000,000 over any previous year. Of this sum timber represented a valuation of $9,217,432; boards, deals, etc., 876,689,000 feet, $13,076,247; other lumber, $8,738,705; doors, blinds, etc., $755,338; household furniture, $3,785,143; other manufactures, $4,051,935. The largest shipments of lumber were made from Puget Sound, the figures being 191,518,000 feet, valued at $1,665,363. From New York, however, although the shipments were only 84,746,000 feet, they represented a valuation of $2,127,004. It is shown that the total exports of boards, deals, etc., from the United States to the Dominion of Canada last year were 58,075,000 feet, representing a value of $809,250.

For the fiscal year ending June 30th, 1897, the imports of wood and manufactures of wood were 883,270,000 feet from Canada, valued at $9,067,312, while less than 1,000,-feet included the total importation of boards, plank, etc., from other countries. The Dingley Bill did not become law until after the close of the fiscal year, and therefore the effect of that tariff on importations from Canada is not indicated by the above figures.

W. R. Ridington, lumber dealer, Fox Warren, Man., has purchased the retail lumber business at that place managed by L. P. Westergard.

## THE CARE OF BAND SAWS.

By A. J. BURTON, Head Filer for Gilmour & Co., Algonquin Park.

THE writer has had a varied experience as a saw-fitter and hammerer in numerous mills, cutting a great variety of woods, and will endeavor to impart to others some of the knowledge thus gained. While I know there are many other men just as expert on band saws as myself, I also believe that a word from me of my experience and of what I practice daily will be interesting to the less experienced filers and also to mill men. The following is my daily practice:

Suppose there are a lot of new saws in the filing room to commence on; in taking the saws out of the case, be careful not to bend the plate or knock the corners off the teeth, put saw on the hammering bench, and with straight edge held lengthwise of the saw, look it over, and if you find any lumps take the light cross-faced hammer, say two pound, and knock down all the lumps all the way round the saw with the long face, being careful not to hit a blow except where it is needed. You might as well place a blow a quarter of a mile away as a quarter of an inch away from the lump. Do not place too many blows without testing the saw with straight edge. If you do you will drive the saw through, and it will require time and labor to get it back. Next, put the saw up on the brackets over bench, and go over the inside in the same manner, always commencing on the outside and always finishing up on the outside, or log side. A beginner is liable to do a little too much, and if so, he will leave the last side worked on a little dished, and therefore it is better for the saw to be dished into the log than out of the log, although to be accurate it should not be dished or turned over at all, but perfectly flat on both sides.

After you have gone over the saw in this manner, go over again and apply the straight edge crosswise on the inside of saw; this will show you the lumps running lengthwise of the saw; stand in front of the levelling table or anvil, and with the cross-face of the hammer knock down any lumps that may be found, using care not to hit too heavy so as to make a dint in the plate. After going over saw in this manner put saw down and go over the outside in the same way. If you do this with care you will have a saw with a straight toothed edge and a flat surface. Now, take a droop level or tension gauge, use a No. 5 gauge with a 7 or 8" saw, a No. 6 for 9 or 10" saw, and a No. 8 for a 12" saw. Hold the gauge in the right hand and put the left under the saw, say 3 feet from the right hand, and mark with chalk the saw where the droop level or gauge shows darkness. Then with the saw stretcher roll the saw lightly the distance the gauge shows the saw to be stiff, and repeat until the saw conforms to the gauge from one edge to the other.

The Bolton stretcher and shear is the latest and most up-to-date machine, and if proper care is used will never dish the saw. After thus going over the saw and making it fit the gauge all round, examine the saw on the levelling table with straight edge to see if it has been dished at all; if it has you will have to level it again with the cross-faced hammer, but if you have a good stretcher it will not dish the saw unless you use too much pressure. Never allow the saw to pass through the rolls bent up or down, unless you wish to bend the saw. You now have a saw straight and flat with a good even tension all round it.

Next look at the back of saw. Use a back level 5½ feet long. Have the edge to be used concaved $\frac{1}{32}$ inch in the entire length. Mark every place where the level does not fit the saw, and roll the saw about 1½ inches from the back edge, from mark to mark, but never roll longer at one time than the length of the back level. If the back edge of the saw is up to a tight fit to the back level it is good, but if not look at the tension, and if you have opened the saw any, roll next time ½" nearer the back edge; but if the saw is stiffer roll ½" nearer the centre. By following this method you can draw the back without altering the tension, and with practice you can make a perfect running saw and do all the tensioning with the roller.

Always look over the saw with droop level after you have put in the "back," to be sure you have no tight or loose spots; if the saw is too loose roll very lightly along both edges; by so doing you will not change the back. The saw is now ready to put on the sharpener. If you follow these instructions you will have a saw that will stay on the wheels without oscillating, and will stand heavy feed. Before putting a saw on a new or an unknown mill you should examine the mill and see that the boxes are all right and that there is no lost motion. Line the face of the lower wheel parallel with the V track, and line the top wheel with the lower wheel; put on the saw and tilt the upper wheel until the saw runs ¾ of an inch off the top wheel. Be sure to do this with the tilt device. Do not use the cross line, as it throws the saw in a twist so that it will rub against one guide more than the other, and probably cause it to crystallize and crack, besides causing an undue ware on the face of the wheels. Always have the tension even, whatever the droop or amount of tension used may be.

Do not open the saw too near the front edge, as it may crack in the gullet, and do not leave the front edge too stiff or firm, as the saw will snake in a hard log and go back on the wheels. Some filers leave their saws tight for 1½ inches from toothed edge in order to avoid cracks, but I do not think this is the best way. If a saw shows a tendency to crack in front with the tension I have been using, I change the tension to a larger circle, which gives a little less tension, but I let it run from one edge to the other on a perfect circle, except that I leave a half inch strip on the toothed edge, so that the level will show dark for a half inch and then light from there to the back edge.

For hard wood and heavy feeds a saw requires more tension than for soft woods and light feed; therefore be sure to have the saw straight edgewise, for it will stand one-third more feed. For example: You cannot drive a bent nail in hardwood, but straighten it and you can easily drive it. A band saw is similar, and with the edges straight will cut better with less liability to dodge. Always run a little back or convexity in the back edge of the saw, about 1/32" in 5 or 6 feet, and if the saw is properly put up, it will run without oscillation and present a fine cutting edge, and not drive back in the cut. If the wheels are crowing, open the saw a little more where it rests on the wheels, examine the saw as it comes off the mill, and if any light or loose spots, or any long or cross faced lumps appear, take them out. By going over the saws frequently you have not so much work to do at any one time, and you have better cutting saws with less tendency to crack.

In this way a saw should run from 6 to 9 months without cracks, and if cracks occur they are probably due to faults of the filer.

Sometimes our best saw manufacturers make a saw that may crack, or the teeth may split, or it may be ground uneven, or it may be too hard or too soft, and cannot be tensioned to run without making snaky timber. In such cases, as the character of the saw can usually be easily discovered, its condition should be immediately reported to the maker. Saw makers should not be expected to send out saws to be used from three to nine months and then condemned. If defects existing in new saws are not promptly reported as soon as discovered, the fault lies with the filer; do not condemn a saw without giving it a good fair trial. Don't lead the saw with the guides; don't set guides too light; they should be set true to saw with a clearance of about the thickness of writing paper on each side. If the saw does not then run straight, it must be dished or the swage is too heavy on one side, the grinder does not grind square, the track may not be in line, the wheels may not be in line with each other, the face of the wheels may be uneven, or the tension may be uneven in your saw. Be careful in fitting and tensioning your saws at all times, but always see that the mill is in good order also. The best mills and the best sawyers meet with accidents, and saws get pulled off and twisted or bent, which makes extra work for the filer. But don't get angry—it must be put up with. In such a case, go to work, but take it easy; take a block 8 or 10 inches deep, and with a lever or pike 3 x 4 used as a pry, bend the saw back to place. Always apply the lever the way the bend runs, that is, if the bend is square across the saw, use the lever the same way, but if it runs at an angle, from one edge to the other, this is a twist, and you must set the block so as to press with lever directly on twist or ridge. In this way you can bend it back nearly as good as ever; after this, a little work with the cross-faced hammer, placing all blows with the long way of blow parallel with the ridge, will remove it. Never try to level a saw that has no tension in it, but go over it with roller and put in some tension, and you can then level your saw perfectly easy.

(To be Continued.)

## MILLS OF JAMES H. SANDERSON.

ALTHOUGH the saw mills of the Northwest Territory cannot be compared with the gigantic establishments found in Eastern Canada, there are, nevertheless, several mills of considerable importance. At Prince Albert, Sask., the Moore & Macdowell mill is one of the finest. Keith & Co. have also a good-sized mill at the same place, and a third is owned by James H. Sanderson, a view of which is given herewith. Since this view was taken, however, the mill and yards have been greatly improved and extended.

Mr. Sanderson commenced his present lumber business in the year 1887, with four men, and now employs twenty-five the year round. Besides cutting a large quantity of lumber, chiefly spruce, he has a complete planing mill and wood-turning shop, in which all kinds of mouldings, sash, panel doors, etc., are made from the native spruce, which he claims to be superior in quality to the spruce further east.

The equipment consists of two boilers, two engines, saw mill (with a Wm. Hamilton No. 3 carriage and rope feed), lath and shingle machines. In the planing mill and workshop there are a surfacer, matcher, sticker, cut-off and rip saws, tenoning machine, and everything required for the manufacture of doors and sash. The capacity of the saw mill is 20,000 feet per day, besides running the shingle, lath and planing mills at the same time.

LUMBER YARD AND MILLS OF JAS. H. SANDERSON, PRINCE ALBERT, SASK.

The market there is principally local, but Mr. Sanderson states that trade is working up now on the branch line of railroad between there and Regina, as the country is settling up. He also ships lumber to several points on the main line.

No matter in what port of the Dominion you are situated, an expression of your views on any subject relative to the lumber trade is solicited by the publisher of this journal. No reader should wait for a personal invitation. Assistance thus rendered, as well as suggestions for making this journal more valuable to subscribers, will be much appreciated.

Col. James Domville, M.P., of St. John, N. B., is very enthusiastic over the lumber business which his company expects to do in the Klondyke. The estimated cut from the claims owned is two and one-half million feet. The lumber will sell for $200 to $300 per thousand feet. The colonel is now sending out a number of boat builders, and the boats will sell at from $100 to $200 each and will cost about $40.

# THE RETAILER AND Wood-Worker

## THE EXHAUST FAN OR BLOWER.

SINCE the introduction of the exhaust fan in mills and factories for the purpose of carrying off the dust arising from the various machines, there is no place where its usefulness is better demonstrated than in the planing mill, as well as all other wood-working industries. Aside from the satisfaction of having the mill clean and at all times free from accumulations of dust and shavings, the cost of removing the same by this means to a convenient place for storage is much less than that attending the removal of the same by hand labor. The fact is, at the present time no first-class planing mill is considered complete without a shaving room in close proximity to the boiler room, and the exhaust fan with the necessary piping, not only to take the dust and shavings away from the machines, but also to deposit them in the shaving room. The unskillful manner in which the piping has been arranged in some mills has rendered the fan so ineffective, says a writer in the Age of Steel, that but little useful effect has been derived from it, and, to quote the language of a well known operator, "the fan does a little and the wheelbarrow the rest."

Now, there is no necessity for such a condition, provided a suitable sized fan is selected and run at its proper speed. But there is no part of the plant that requires more careful calculation and good judgment than this part of the outfit. The selection of an exhaust fan of the proper size and capacity is of the utmost importance, and this can only be determined by the size of the mill, the number of machines, and the distance to which the dust and shavings are to be carried; in the second place, the size and shape of the piping and the proper proportion between the intake and discharge of the main conduit. The location of the fan is not so important a matter so long as all the branch pipes are connected upon the exhaust side; but in practice it has been found, where the conditions are such as to admit of it, that the most effective place for its location is about midway between the points where the first shavings are received and the point at which they are discharged. The size of both portions of the main conduit should in all cases be governed by the size of the openings in the fan. The efficiency of this part of the output for performing its work in a satisfactory manner depends upon the velocity of the air as well as in the main conduit. If the main conduit is of a certain size with the fan running at a given speed, the velocity of the air will be in a certain proportion to that speed, provided it is not in any manner obstructed; and it is also important that the same relative velocity should be maintained in each one of the laterals. But if, as is frequently the case, the combined area of the lateral pipes is greater than the area of the main conduit, then when all are in use, the air current will be less just in proportion to their combined areas. Another fault in the construction of the lateral pipes is in the manner in which they are connected with the main conduit, and although, as a rule, the machines are so arranged that the lateral pipes are necessarily at right angles with the main conduit, still the connection should be made in such a manner that the lateral will by means of a round bend ender the main conduit at an angle of from 30° to 40° in the direction of the current, so that instead of obstructing its velocity it will help to increase it. Again, the diameter of the laterals in all cases should depend upon the character of the material to be carried off. The shavings from a planing machine are much lighter than the sawdust from a resawing machine or a common saw table, and, while a moderate current of air would carry off the shavings from the former, a much stronger current would be required for the latter. Hence, where everything is in proportion to the size of the main conduit, it is found in practice that the pipes from a resawing machine should be of less diameter than those from the planer, in order to obtain greater velocity in the air. That portion of the main conduit leading from the fan to the shaving room is another point in which there has been a diversity of opinion. Some claim that it should be enlarged as it recedes from the fan in a certain proportion to its length. There is no good reason why such should be the case, and it is not warranted in mechanical philosophy. Now, with this part of the conduit as well as the other, its efficiency depends entirely upon the velocity of the air, and by enlarging it as it recedes from the fan, and thereby increasing its area, must have the effect of checking the current, and consequently it will have less power to carry forward the material.

---

Messrs. G. O. Gilbert & Son, Bishop's Crossing, Que., in remitting their subscription, write: "We never feel too busy to read THE LUMBERMAN as soon as it comes to hand."

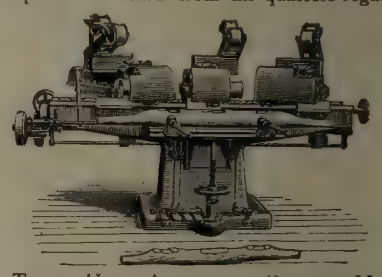
A furniture manufacturer of very long experience gives this advice to those who finish and polish wood: Never thin your filler by guess; avoirdupois weight is safer. Vary the body of your filler to the pore of the kind of wood to be filled. If you have a good job to do, don't try to do it by using your filler extra heavy. Smooth work to begin with followed by well-filled pores starts your foundation aright. Remember that work started smooth and kept smooth will continue smooth to the end. Remember that, the smoother your work at the finish, the less scouring there is needed to get the result. Whiskers sand off easier after the filler than at any other stage. Filler can be coated over in 24 hours; it is always better to give it 48. Always shellac mahogany before you fill, if you desire an unclouded result.

## A MODERN WAGON FACTORY.

THE pleasure was afforded us a short time ago of a visit to the Milner-Walker Wagon Works Co., Limited, of Walkerville, Ont., who have the largest and most complete works of their kind in the Dominion, embracing as they do a flooring capacity of sixty thousand sq. feet, together with 500 feet of dockage on the beautiful Detroit river, and a railway spur extending from the G.T.R. through the works to their dock affords excellent facilities for handling the incoming material and outgoing product. These advantages, together with some 60 different

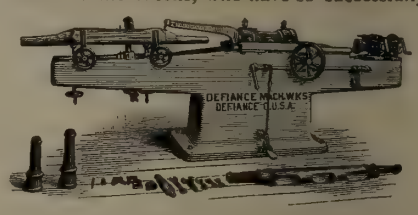
machines of the very latest improved designs, purchased from the renowned wagon woodworking machinery manufacturers, the Defiance Machine Co., of Defiance, Ohio, enables these works to produce from 25 to 30 wagons per day, each machine being able to turn out more than even their guaranteed capacity.

These new works have been very much encouraged by extensive orders from various parts of the Dominion; already they are shipping from three to five cars of wagons weekly, and nothing but praise is heard from all quarters regarding their



PATENT THREE-HEAD AUTOMATIC GAINING MACHINE.

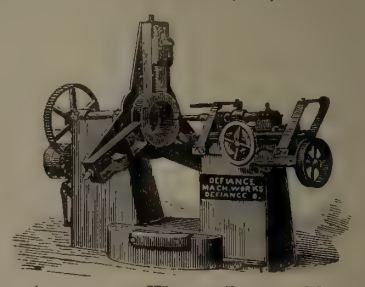
production. Canada, and especially the locality where these works have been established, certainly has reason to be proud of such an enterprise. We cannot speak too highly of the machines in these works. So solid are they that they do their work without the slightest tremble, thus ensuring durability. Much credit is due Messrs. Kitterenring & Sons, proprietors of the Defiance Machine Works, who have so successfully during



NO. 2 PATENT AUTOMATIC SKEIN SETTING AND FITTING MACHINE.

nearly half a century brought into use many such valuable labor saving devices. This company deservedly rank among the most worthy manufacturing concerns of the great Republic to the south.

Mention should be made of the officers of the Milner-Walker Wagon Works Co. The general manager, Mr. Wm. Milner, whose fame as a wagon builder is well and favorably known over the entire continent, together with the world-



NO. 2 AUTOMATIC WHEEL BOXING MACHINE.

renowned business gentleman, Mr. Hiram Walker, as president, and the well known financier, Mr. D. R. Pierce, as secretary and treasurer, makes success doubly certain for this enterprising concern.

The accompanying cuts represent three of the many machines supplied by the Defiance Machine Co. for these works, and which are necessary to accomplish the work of wagon making with accuracy and precision.

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., APRIL 27, 1898 No. 14.

## CANADA LUMBERMAN

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL.

**Weekly Lumberman,** published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

*Prepared by the Editor of the Canada Lumberman."*

Toronto, Canada

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.—One million 18-inch Pine Shingles. Apply B. J. THOMAS, Rock Hill, Ont.

WANTED.—1½" and 2" Dry Maple; 1" Elm, common and cull; 1" Butternut; 2" Common Rock Elm; also any kind of dry lumber, for cash. Box 32, CANADA LUMBERMAN.

WANTED.—A contract for sawing from five hundred thousand to two million feet of pine lumber, or will buy a small raft of pine, elm or basswood logs. PICKARD & ROWAN, Owen Sound

WANTED.

PEELED PAVING CEDAR.—STATE QUANTITY you can furnish, with lowest price. REID & Co., Esplanade street, Toronto.

WANTED.

HIGHEST CASH PRICE PAID FOR SOFT and Rock Elm and Black Ash; all thicknesses and all grades. Inspection at mill. Write KEENAN BROS, Owen Sound, Ont.

WANTED.

SITUATION AS MANAGER OR FOREMAN in a good lumber mill (band mill preferred). Am practical, capable of constructing, estimating or operating. Best of references will be given. Address Box 60, CANADA LUMBERMAN, Toronto.

FOR SALE

OR EXCHANGE FOR LUMBER, BAND SAW, Roller Feed Rip Saw, Blind Slat Tenoner, 3 sided Sticker, and 40 ft. Line Shafting, with Pulleys and Hangers. Particulars on application to D. AITCHISON & Co., Hamilton, Ont.

## CURRENT TRADE CONDITIONS.

### ONTARIO.

What was said last week regarding the prosperous condition of the local market is borne out by further reports received within the past few days. While the activity is common to the whole province, there appears to be an exceptionally good demand in western Ontario, where building operations account for the greater portion of the consumption. All grades of pine are in demand, but the chief call is for the cheaper qualities, such as can be used in the less expensive buildings. Box, dressing and bill stuff find ready sale. Dry stocks at the mills are not heavy; in fact, they are probably 25 per cent. less than at same time last year, and consist mostly of common and mill culls, for which the demand is active. The market is practically bare of good hardwoods, while the supply held by many customers is not sufficient to keep their factories running until the new cut is available. There is reason to expect that the present season will be very favorable for the hardwood trade, the general feeling being that prices will advance in the near future. Shingles are much asked for by both local and United States dealers.

### QUEBEC AND NEW BRUNSWICK.

The shipment of lumber from Quebec ports is now attracting the attention of the trade, as within the past week representatives of British houses have arrived to look after their stock. There is some anxiety regarding freight rates, which are now advancing owing to the demand for grain tonnage. Shippers who were fortunate enough to contract for space early in the season were given very favorable rates, but it is probable that new contracts will have to be made at a substantial advance. Vessels are now loading deals for British ports, while rafts of square timber are now en route to Quebec. Local trade in Montreal and Quebec is somewhat backward, but in rural districts a fair trade is reported. As anticipated, shipping from New Brunswick is dull. The St. John shippers have purchased some stock, but a lack of confidence in transactions is very apparent. No lumber of any consequence has been shipped to the United States beyond the product of mills owned by Americans. Laths have been firm for some months past, and early in the season sales were made at good prices. In Nova Scotia the cut of logs last winter was not as heavy as the previous season, but the curtailment was not as pronounced as in New Brunswick.

### MANITOBA AND BRITISH COLUMBIA.

Wholesale trade in Manitoba is not as active as earlier in the season, dealers having replenished their stocks sufficiently to supply the demand for several weeks to come. The outlook for the year's business, however, is good. Prices are firm and building operations greater in extent than for many years. In Winnipeg the erection of new and remodelling of old business blocks is evidence of renewed confidence in the commercial world, while the granting of aid by the provincial government to three railways is also significant. These roads are to be proceeded with at once, and will consume a considerable quantity of dimension timber, ties and other material. Local trade in British Columbia is fairly prosperous, owing to increased building operations and the demand from mining quarters. There is very little doing in foreign shipments.

### UNITED STATES.

The contest with Spain, in which the United States is now engaged, has put a temporary check to many proposed ventures, especially along the east coast, and indications of a falling off in the lumber demand are apparent. Building operations in the larger cities early in the year promised to greatly swell the lumber demand, and created the hope that the year would be one of unusual prosperity. This has now been changed, and at least for a time the movement of lumber will be less active. But it is also believed that after this temporary check there will come a pronounced stimulus to business, and that lumber will be one of the chief commodities for which a greater demand will be created by the expenditures on account of war. On the other hand, while local trade may be improved, export business will likely be seriously interfered with, and the gain to the lumber trade will be of little account after all.

There continues to be a wide gap between the prices for pine asked at northern mill points and those which the eastern wholesale dealers feel disposed to pay, and consequently there has been little buying. The east is not really in need of stock, and is in a position to hold off, in the hope that as the season advances prices at mill points will weaken. Whether or not this will work out to the satisfaction of the eastern wholesalers is somewhat problematical, and will depend to a large extent on the effect of the war on the demand. These conditions may result in more Canadian pine being purchased. The movement of pine at Buffalo is not heavy, and the outlook none too promising, with no prospect of any advance in prices. Boston reports state that the spruce trade is quiet. Hardwoods still hold first position in the lumber trade. Oak, basswood, maple, ash and elm are the favorites, in all of which only very light stocks are held by dealers. The sash and door trade, which was until recently active, is experiencing a lull in demand.

### FOREIGN.

The situation in the British market has changed but little since our last report. Consumption continues very active both on the east and west coast, and the large stocks are being gradually reduced. With a moderate import this spring and summer, the market will soon regain its former strength, although as yet new goods have not been contracted for with any degree of liberality. At Liverpool some large orders for spruce deals have lately been placed, and on the east coast Canadian woods have made such inroads on the market formerly held by Baltic shippers that the latter are coming down in their asking prices. The demand from South America appears to be improving.

## STOCKS AND PRICES.

### CANADA.

The bark Alice is loading deals at Port Medway, N. S., for a British port.

Tenders are invited by the city of Montreal for the supply of lumber for the year 1898.

Chew Bros.' mill at Midland, Ont., is expected to commence operations about May 10th.

W. Buchanan, of Thamesville, Ont., is shipping several carloads of white ash logs to Great Britain.

The town of Owen Sound, Ont., wants tenders by the 30th inst. for supplying a quantity of 2 inch pine plank.

Clarke Bros., of Bear River, N. S., recently loaded two vessels with lumber for Cienfuegos, each with 300,000 feet.

The Gall Lumber Co., of Toronto, announce that they are in the market for dry oak lumber, 1 to 2 inch, and soft elm 1 to 3 inch.

R. F. Reid, of Georgetown, recently sold to Mr. Gordon, lumber dealer, of Stratford, 100,000 feet of maple, rock elm and basswood lumber.

The city of Winnipeg is prepared to receive tenders up to Wednesday, May 4th, for the supply of from 500 to 1,000 cords of cedar paving wood.

George Stephens & Co., of Chatham, Ont., will add sash, doors and dressed lumber to their business, and now require several carloads of this stock.

The town of Barrie, Ont., has accepted the tender of Mickle, Dyment & Co. for pine lumber at $11.75 per M, and that of W. D. Vansickle for cedar and hemlock, at $11 and $8 respectively.

The Assiniboine Lumber Company, of Brandon, Man., have 1,000,000 feet of logs on hand for spring sawing, in addition to 8,000,000 feet of logs cut during the past winter, which will reach the mill at an early date.

J. D. Shier, of Bracebridge, Ont., has 3,000,000 feet more logs than can be handled by his Bracebridge mill. He is said to be negotiating for the sawing of this surplus timber at Mickle, Dyment & Co.'s mill at Gravenhurst.

The attention of mill men and lumber buyers is directed to the "Wanted and For Sale Department," in which will be found advertisements of persons in need of certain kinds of lumber, as well as of manufacturers having stock for sale.

W. P. DuBois, of Robert P. Sizer & Co., lumber dealers, New York, recently visited St. John, N. B., for the purpose of purchasing lumber. His firm deal chiefly in spruce and laths. Mr. DuBois states that West Virginia spruce is used to a considerable extent in New York, coming in competition with the spruce lumber of the maritime provinces.

Stream driving in New Brunswick is now under way. W. A. Anderson, of St. John, has nearly 2,000,000 feet on the South Branch. Smith Bros. have their Shin creek drive out. Alex. Gibson & Son last week despatched a crew of 250 men to the head water of the Nashwaak, and Welsh & Lynch sent a crew of 180 men to the Miramichi. The Nashwaak and tributaries have been clear of ice for a couple of weeks and the river is reported to be in good condition for stream driving.

The annual report of the Department of Interior states that during the year 1897 34,376,599 feet B. M. of lumber were manufactured from timber cut under license in Manitoba, the Northwest Territories and within the railway belt in British Columbia, and 32,894,251 feet B. M. were sold. The quantity of lumber disposed of in Manitoba, and at points as far west as Regina in the Territories, was as follows: Canadian pine from the Lake of the Woods, 45,000,000 feet; Canadian pine from points between the Lake of the Woods and Port Arthur, 10,500,000 feet; Canadian spruce, manufactured in Manitoba, 14,241,909 feet; United States pine and hardwood, imported from the state of Minnesota, 16,871,104 feet; British Columbia products, 6,000,000 feet.

The shipments of lumber, etc., from St. John, N.B., for the week ending April 23rd were as follows: For Boston, per sch. Hattie Muriel, 8,403 feet ends, 6,465 feet boards, 20,002 feet scantling, 614,000 cedar shingles, by Stetson, Cutler & Co.; 350,000 cedar shingles, Chas. Miller. For Pawtucket, per sch. Thos. B. Reed, 141,594 feet hemlock boards, by A. Cushing & Co. For New York, per sch. Nellie J. Crocker, 980 pieces piling, by John E. Moore. For Vineyard Haven, per sch. Canary, 632,000 laths, by Murray & Gregory. For City Island f.o., per sch. Alaska, 24,746 feet plank, 124,081 feet deals, 8,628 feet scantling, by A. Cushing & Co. For Salem, per sch. Mary George, 548,000 laths, by W. H. Murray. For Boston, per sch. L'Edna, 26,542 feet plank, 28,756 feet deals, 33,052 feet scantling, by A. Cushing & Co. For Providence, per sch. Thistle, 126,878 feet plank, 11,828 feet deals, 15,794 feet scantling, 156,500 laths, by A. Cushing & Co. For Boston, per sch. Georgia E., 120,190 feet boards, by Miller & Woodman. For Beverly, per sch. Walter Miller, 132,031 feet boards, 65,106 feet plank, by Stetson, Cutler & Co. For City Island, per sch. Maggie J. Chadwick, 328,495 feet deals, by Stetson, Cutler & Co. For Washington, per sch. Annie Bliss, 1,950,000 laths, by Miller & Woodman. For Glasgow, per s.s. Concordia, 4,176 bdls. box shooks, 149,711 feet deals. For London, per s.s. Cheronea, 18 elm logs, 2,300 maple blocks, 933 bales pulp, 1,304,648 feet deals. For New York, per sch. Alfaretta S. Snare, 740 pieces piling, by J. E. Moore. For Boston, per sch. Silver Wave, 120,000 feet plank and scantling, 50,000 laths, by G. R. McDonough; per sch. R. Carson, 500 pieces piling, by R. Carson.

### FOREIGN.

The cut of logs on the St. Croix river last winter was about 20,000,000 feet.

It is said that quotations have been asked for several large quantities of box shooks for the West Indies, and that from Mexico and South America good sized contracts have been placed during the past two weeks.

Spruce prices at Boston remain unchanged. In hardwoods there is a decided scarcity, and the demand is improving for oak, ash and maple, as the furniture and piano manufacturers have been putting in a good supply.

The Pacific coast mills have advanced the price of red shingles, stars now being held at $1.35 to $1.50 at the mills. The advanced price is said to be due to the increased value of cedar logs. Fir lumber is firmer than it has been for three or four years.

At Albany there has been some enquiry during the past week for good 3 and 4 inch pine, but there is very little in the market. Prices on uppers are not as firm as on the common grades of pine. All kinds of dressing lumber are scarce, as well as 1 inch good lumber, but there is plenty of 1¼ and 1½ inch stock.

Messrs. W. B. Mershon & Co., of Saginaw, Mich., advise us that they are very busy in their packing box department, and the call for box shooks seems unprecedently large. A slacking up is noticed, however, in the demand for lumber for building purposes, and undoubtedly there will be little call for it until the war is over.

Messrs. McDowall & Nielson held an auction sale of timber and deals at Greenock, Scotland, on April 7th. The principal goods sold were the following:

| | | Per c. Ft. |
|---|---|---|
| 40 logs waney boardwood | | 2s. 1½d. |
| 20 " 2nd class " | | 1s. 10d. |
| 40 " " " | | 1s. 9d. |
| 20 " Quebec rock elm | | 1s. 8½d. |
| 20 " sawn pitch pine | | 11d. |
| 20 " " " " | | 10½d. |
| 20 " " " " | | 10d. |
| | | Per Foot. |
| 3rd Quebec pine deals | 16 x 7/11 x 3.. | 1s. 2d. |
| 3rd " " " | 12/13 x 7/11 x 3.. | 1s. 0½d. |
| 3rd " " " | 10/11 x 7/11 x 3.. | 11½d. |
| 4th " " " | 9 x 11 x 3.. | 9d. |
| 4th " " " ends. | 4/8 x 11 x 3.. | 8½d. |
| 2nd avg. St. John spruce | 14/17 x 11 x 3.. | 1s. |
| 2nd " " " | 14/18 x 9 x 3.. | 11½d. |
| 4th Quebec spruce | 12/16 x 7/16 x 3.. | 9d. |

## WINNIPEG LUMBER PRICES.

The following are the retail prices for lumber in Winnipeg, according to the new list which took effect on April 1st:

1st common boards, red pine, $25; 2nd common boards, $18.50; 3rd common boards, $16.50; No. 1 cull, pine or spruce, $13; No. 2 cull, pine or spruce, $9; spruce boards, $16.50; $1 per M extra for stock boards; $2 per M less for 6 to 8 ft. and under; $1 per M less for 10 ft.; No. 1 box boards, 14 in. and upward, $30; No. 2 box boards, 14 in. and upward, $23; Extra dressing per M $2.

### DIMENSION AND TIMBER.

| No. 1—Sizes | 12 ft. | 14 ft. | 16 ft. | 18 ft. | 20 ft. | 22 ft. | 24 ft. |
|---|---|---|---|---|---|---|---|
| 2x4 to 2x12 | $18.50 | 18.50 | 18.50 | 19.50 | 20.50 | 21.50 | 22.50 |
| 3x6 to 3x12, 4x4 to 4x12, 6x6 to 6x12 and 8x 8 | 20 | 20 | 20 | 21 | 22 | 23 | 24 |
| 8x10 to 12x12 | 22 | 22 | 22 | 23 | 24 | 25 | 26 |

2x4—1c@ $20.50; 2x6 to 2x12—1c@ $ 8.50.

No. 2 dimension $2 less than No. 1; dimension, 26 ft., 28 ft., 30 ft., $26; timber, 26 ft., 28 ft., 30 ft., $28. $1 per M advance on each inch over 12 in. in depth and width. Tamarac dimensions same price as pine; spruce dimensions at $2 per M less than pine; cull plank, all widths, at $12 per M; B.C. fir dimension up to 21 feet at $28 per M; 33 to 40 ft., $30; 41 to 60 ft., $36; $1 per M extra for each 2 in. over 12 in. in width or depth

### SIDING, FLOORING AND CEILING.

2nd 4, 5 and 6 in. white pine, $36; 3rd 4, 5 and 6 inch white pine, $28; 1st and 2nd 4, 5 and 6 inch red pine, $30; 3rd 4, 5 and 6 inch red pine, $25; 4th 4, 5 and 6 inch red and white pine, $20; cull siding, red and white, $16; B.C. No. 1 and 2 edge grain flooring, 3, 4 and 6 inch, $32; B.C. No. 3 flat and edge mixed, 4 and 6 inches, $25; B.C. No. 1 and 2 flat grain flooring, 3, 4 and 6 inches, $25; B.C. No. 3 flat grain flooring, 3 inches, $22; 1¼, 1½ and 2 inch, $1 per M more than 1 inch; B.C. No. 1 and 2 fir ceiling, 1 inch, $28; B.C. No. 3 fir ceiling, 1 inch, $25; B.C. No. 1 and 2 fir ceiling, ¾ inch, $25; B.C. No. 3 fir ceiling, ¾ inch, $23; B.C. No. 1 and 2 fir ceiling, ⅝ inch $21; B.C. No. 1 and 2 fir siding, 6 inch, $28; B.C. No. 3 fir siding, 6 inch, $25; B.C. spruce No. 1 siding, flooring and ceiling, $36; B.C. spruce No. 2 siding, flooring and ceiling, $30; B.C. cedar siding No. 1, 10 to 16 ft., $39; B.C. cedar siding No. 1, 6 to 9 ft., $34; B.C. cedar ceiling No. 1, 10 to 16 ft, $42; B.C. cedar ceiling No. 1, 6 to 9 ft., $35; B.C. cedar ceiling No. 1, ⅝ inch, 10 to 16 ft., $35; B.C. cedar ceiling, No. 1, ½ inch, 10 to 16 ft., $32; 4, 5 and 6 inch native spruce, $20; cull spruce, $16; $2 per M advance for dressing both sides.

### BEVEL SIDING.

No. 1 white pine, $26; No. 2 red and white, $23.

### SHIPLAP.

Pine, 8 and 10 inch, $20; pine, 6 inch, $18; spruce, 8 and 10 inch, $19; spruce, 6 inch, $18; pine or spruce cull shiplap, 8 and 10 inch, $17; pine and spruce cull shiplap, 6 inch, $14.

### SHINGLES.

B. C. cedar, per M., No. 1, $2.75; B. C. cedar, per M., No. 2, $2.50; B. C. cedar dimension shingles, $4; B. C. cedar, dimension, band-sawed, $5.

### FINISHINGS.

1¼ inch, 1½ inch and 2 inch.—White pine, 1st and 2nd clear, $65; white pine, 3rd clear $55; white pine, selects, $45; white pine, shops, $36; red pine, clear, $40; red pine, selects, $32; B. C. cedar, clear up to 12 inch $50; B. C. cedar, clear over 12 inch, $55; B. C. fir, edge grain No. 1 stepping, $45; B. C. fir, edge grain No. 2 stepping, $40; B. C. fir, flat grain No. 1 stepping, $37; B. C. fir, flat grain No. 2 stepping, $32.50; B. C. fir finishings, up to 12 inch, $37.50; B.C. fir finishings, over 12 inch, $42.50. $5 per M. advance on 2½ inch and thicker.

One Inch.—White pine, 1st and 2nd clear, $55; white pine, 3rd clear, $48; white pine, selects B; $38; white pine, selects C, $30; red pine, clear, $40; red pine, selects, $30; B.C. cedar, clear, $50; B. C. fir finishings, up to 12 inch, $37.50; B.C. fir finishings, over 12 inch, $42.50.

### LATH.

Pine lath, per M., No. 1, $3; pine lath, per M., No. 2, $2.50.

### OAK, RED AND WHITE.

¼ sawed, $85; 1st and 2nd, $55 to $65; common, $40.

## SHIPPING MATTERS.

The ocean freight rates from Montreal and the rest of the Canadian ports are on the increase, owing to the demand from United States points, and there is no question that the St. Lawrence fleet will have to be augmented by a great many additional steamships this season if the freight business is to be taken care of. Some of the steamship lines engaged large quantities of lumber in the season, but are now offered much better rates for carrying grain.

The following charters are reported: Sch. Carlotta, Crandall, Florida, to Grenada, $8; ship Lennie Burrill, Portland to Buenos Ayres, lumber, $8.50; bark Alberta, Yarmouth to Buenos Ayres, lumber, $9 (Rosario, $10); barques Africa, New York to Montevideo f.o., lumber, $8 50; Flora, Shediac to e.c. Ireland or w.c. England, deals, 46s. 3d.; Spanish steamer Riojana, 3,172 tons, St. John, N.B., for Liverpool, timber 21s. 3d., deals 43s. 9d., June-July loading.

Freight rates from St. John, N.B., to British ports range from 42s. 6d. to 43s. 9d., although it is reported that a charter has been made at 45s. A telegram received recently from New York announced that from 3s. 9d. to 3s. 10½d. was being offered for steam tonnage to load grain at New York for the United Kingdom. This is equal to 55s. on deals from St. John, o that everything points to stiffer rates.

## LUMBER FREIGHT RATES.

### CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse and Rome, $2.20 per M ft ,(3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Quebec, $2.00; Arnprior to Montreal, $1.50 per M; Quebec, $2.50; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to New York, via Albany and Williams Line, seasoned pine lumber and shorts, in lots 50 M feet and over, $2.50 per M; under 50 M feet, $3.00 per M; from Arnprior, lots over 50 M feet, $3.00; under 50 M feet, $3.75 per M; from Parry Sound, lots 50 M feet and over, $4.00 per M; seasoned lath from Ottawa, lots 250 M pieces and over, 50 cents per M pcs.; lots under 250 M pcs., 60 cents per M pcs.; from Arnprior, lots 250 M pcs and over, 60 cents per M pcs.; under 250 M pcs., 70 cents per M; from Parry Sound, 80 cents per M pcs., lots 250 M and over; (rates named on lots under 50 M feet lumber and 250 M pcs. lath subject to extra towage. Rates on 50 M feet lumber and over and 250 pcs. lath are applicable to all points in New York city excepting points above Madison avenue bridge in Harlem river, to all points in Brooklyn, and to Jersey City proper; Ottawa to Boston, Portland and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

### GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively. Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

### CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent C.P.R, writes as follows under date of February 14th, 1898: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct, Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior, Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30,000 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa, Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M feet and over, $3; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 55c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $3.25; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4.25; under 50 M feet, $4.50; lath, 250 M pieces and over, 60c. per M pieces; under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3.50; under 50 M feet, $3.75; hardwood, 50 M feet and over, $4.50; under 50 M feet, $4.75; lath, 250 M pieces, 65c.; under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts, 50 M feet and over, $3.75; under 50 M feet, $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 70c.; under 25 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.; lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 11c. per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil. The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber."

## CANADIAN EXPORTERS AND WHOLESALERS

THOS. MEANEY & CO.
103 Bay Street - TORONTO
WANT Rock Elm 1½ to 3" thick, 12 to 16 feet long
Will pay Good Price for Good Stock.

JAS. PLAYFAIR & CO.

## BRITISH COLUMBIA LETTER.

[Correspondence of the CANADA LUMBERMAN.]

THE question in which the lumbermen of this province are most interested in at the present time is the securing of an import duty on lumber and shingles coming from the United States. To this end the aid of the provincial legislature was asked, and recently the Premier introduced in the House the following resolution :

"Whereas the manufacture of lumber and shingles in this province forms one of the most important industries and furnishes employment to a large number of mechanics and laborers, who constitute an important portion of the population of the province ; and whereas a large proportion of the supplies used in connection with the business is subject to customs duty, which largely increases the cost of production ; and whereas lumber and shingles under the customs tariff of the Dominion are admitted free of duty ; and whereas competition from the United States in the markets of the Dominion, since the removal of the customs duty, has deprived this province of a large part of the business formerly done in these products ; and whereas the mining developments in the Yukon and northern part of British Columbia make it probable that important settlements and sea ports will be established on the northern coast during the present year, in which there will be an immediate and large demand for lumber and shingles, for the supply of which, under the present Canadian tariff, our lumbermen have no protection against the competition of the United States saw mills ; and whereas, under the custom laws of the United States, a heavy duty is imposed on lumber and shingles from this province, which prevents shipments from this province into the United States markets, the duty in the United States being on undressed lumber $2 per M, on flooring $3.50 per M, and on shingles 30 cents per 1,000 ; and whereas it seems to be unjust to this important industry that while a large proportion of the supplies used by those engaged in it are required to pay duty, the products are not protected by any duty, and while the neighboring markets in the United States are closed against this province because of the heavy duty imposed, the markets of Canada are free to the products from the United States ; Be it therefore resolved, that an humble address be presented by this house to the Lieutenant-Governor, praying him to move the Dominion government to take such steps as are necessary with the view of protecting those engaged in the manufacture of lumber and shingles in this province by imposing a duty on lumber and shingles imported into the Dominion of Canada equal to the duty charged by the United States on imports of these articles from Canada, in order that this important industry may be placed upon such a footing in competing with the neighboring mills in the United States as will compensate them for the disadvantages set out in the preamble to this resolution."

Speaking to the resolution, the Premier pointed out that the lumber industry was one of the most important in the province, and he hoped that every member would vote for the proposed measure. Speeches in favor of the resolution were made by Messrs. Rithet, Semlin, Kennedy, Graham, Smith, Cotton and Hunter, and against the measure by Messrs. Sword, Forster and Macpherson. Mr. Sword thought that the remedy was to take off the heavy duties the lumbermen had to pay for their supplies. He took strong exception to the position that because the United States put on a heavy duty Canada should follow suit. It was not taking high enough ground in the matter. Mr. Forster claimed that the measure would put a heavier tax on consumers, and Mr. Macpherson made the weak argument that it would show Canadian mill men to be less capable than those of the United States. When the vote was taken the three members above referred to stood alone against the measure.

The lumbermen of British Columbia have petitioned the government for a uniform compulsory system of scaling. The petition, which is signed by 132 lumbermen, is as follows :

The petition of the undersigned lumbermen of the province of British Columbia, humbly sheweth :

That your petitioners have been laboring under a want of system in scaling logs and timber, to the detriment of the timber trade and those relations of confidence which should exist between the buyer and seller.

That a uniform compulsory system of scaling should be adopted, alike just to the government, the buyer and seller, the cost thereof to be borne by the three interested parties in equal proportions. Scale of costs to be fixed by the Lieutenant-Governor in Council or by statute.

We are of opinion that any competent person first obtaining the recommendation of three responsible lumbermen, who is capable of passing the necessary examination under the provisions of the "Official Scalers' Act, 1894," or like provisions, shall be entitled to an appointment as "Official Scaler."

That official scalers should not be paid by salary, but only by fees for work actually done.

No scaler in employ under wages of buyer or seller to act as scaler.

Particulars of scale, as per form annexed, to be delivered to government agent, buyer and seller.

In case either party objects to the scale, he may immediately call in the services of a second scaler ; if they do not agree the two scalers may name a third whose measurement shall be final and binding upon all parties.

## NEW BRUNSWICK LETTER.

[Correspondence of the CANADA LUMBERMAN.]

THE season for shipping lumber has now opened, and although the year is certain to be a quite one, several vessels are now loading at different ports. There appears to be a scarcity of tonnage, some steamers having refused 45s. on deals from St. John to British ports. This will probably further curtail shipments.

The thirteenth annual meeting of the St. John Log Driving Company was held at Fredericton on April 6th. Among the lumbermen present were the following : W. H. Murray, of St. John ; F. H. Hale, M.P., Woodstock ; R. A. Estey, J. A. Morrison, and D. F. Fraser, jr., Fredericton ; G. A. Murchie, Calais ; R. A. Nixon, Houlton ; C. A. Moore and W. S. Henry, Woodstock ; W. A. McCallum, Houlton ; B. F. Mallett and W. F. Cunliffe, of Fort Kent ; Robert Kent, Hon. Jas. Holly, C. F. Woodman, F. D. Miles and J. Fraser Gregory, of St. John. The following were elected directors of the company : W. H. Murray, president ; G. A. Murchie, vice-president ; J. Fraser Gregory, secretary-treasurer ; R. A. Estey, W. B. Mallett and Harry Hilyard. It was proposed that the driving of logs should hereafter be done by the corporation, the lumber to bear the expense, on the principle of which the Southwest Miramichi Driving Company operate, instead of being let to tender. . The proposition seemed to meet with a hearty reception from several people, but the larger operators, who control the largest number of votes, defeated the motion. In the afternoon the tenders for driving were opened, and the contract awarded to Duncan McIntosh and Robert Aiken for a term of three years. Their tender is a bonus of 22 per cent. of the advertised rates, which amounts to four and two-fifth cents per thousand for driving from the upper points, namely, Grand Falls and Aroostook.

The Upper Southwest Miramichi Log Driving Company held a meet in Fredericton on March 30th. After routine business there was an election of a board of directors for the year. The old board—M. Welsh, Timothy Lynch and E. Hutchinson—were re-elected. At a later meeting of the directors Mr. Welsh was elected president and J. H. Barry secretary-treasurer. Messrs. Welsh and Lynch were appointed to look after the driving operations for the coming year. The company drive the logs and tax the lumber for the cost from the different points between the Forks and Hayes' Bar, a distance of 41 miles.

ST. JOHN, N.B., April 21, 1898.

## PUBLICATIONS.

The story of the Swiss Government's purchase of the railroads, as authorized by the recent referendum vote, is told in the American Monthly Review of Reviews for April, by Mr. J. R. Macdonald.

It is not necessary that one should visit the west coast of the United States to know something of the lumber industry. In the special number of the West Coast and Puget Sound Lumberman, recently issued, is to be found data and illustrations which give a splendid idea of the magnitude and importance of the lumber industry of Washington, while considerable space is devoted to Oregon, California and British Columbia. The number is an attractive one, with green cover, and a liberal amount of advertising.

The twenty-first anniversary special issue of the Timber Trades Journal, of London, Eng., discounts all former attempts of the publishers, Messrs. Wm. Rider & Sons. It contains over 300 pages, the special feature being a very complete description of the export pine trade of the Southern States, to which sixty-six pages is devoted, and which was compiled by their special commissioner, Mr. Edwin Haynes, who, it will be remembered, visited Canada last year for a similar purpose. Other features make the issue extremely interesting and instructive.

## THE FACTS DISPUTED.

VANCOUVER, B.C., April 5th, 1898.

To the Editor of the CANADA LUMBERMAN :

DEAR SIR,—In your March issue a person, C. H. May, vouches for the yarn about an alleged English mill superintendent. These are the facts : No person connected in any official capacity whatsoever took a valet to Takush Harbor at any time ; no Englishman was sent out to fill the position of mill superintendent. Seeing that your correspondent's alleged facts are not facts, and that they appear in your Eli columns, you can infer what you like about the rest of his story.

Yours faithfully,
ALBERT F. GRIFFITHS.

[The story referred to was not sent in by a correspondent, but appeared in a west coast lumber exchange, to which credit should have been given.—THE EDITOR.]

## PERSONAL.

Hon. R. R. Dobell, of Quebec, returned from England last month.

Mr. Samuel Campbell, mill owner, of Hartland, N.B., died last month, after an illness of a few weeks.

Mr. Dorat Lemieux, son of Mr. Jos. Lemieux, lumber merchant, Hull, Que., was recently married to Miss Bertrand.

The death occurred on March 30th of Mr. E. L. Sewell, a retired lumber merchant of Quebec, at the age of 51 years.

Mr. Edward S, Waycott, book-keeper for Alex. Gibson & Sons, of Marysville, N.B., died recently, at the age of 44 years.

Mr. E. C. Grant, of the Ottawa Lumber Company, returned on April 1st from a business trip to Great Britain. He will probably visit Germany this summer.

Thos. Mackerel, representing the well known lumber firm of Watson & Todd, of Liverpool, Eng., recently arrived in Ottawa, to look after spring shipments.

Mr. Joseph Lemieux, the well-known lumber dealer of Hull, Que., was recently presented by his townspeople with an address, accompanied by a parlor set and a gold mounted pipe, on the occasion of his fiftieth anniversary.

Mr. W. A. Hadley, of the S. Hadley Lumber Co., Chatham, Ont., left on April 7th for Duluth, British Columbia and San Francisco, in the interest of the company. Before returning he will visit the Southern States.

By telegraph from Florida the death was learned recently of Mr. John D. Gilmour, who retired from the lumber firm of Gilmour & Co., of Trenton, about five years ago. He was a gentleman who was held in very high esteem.

Mr. C. J. Smith, general freight and passenger agent of the Canada Atlantic and the Ottawa, Arnprior and Parry Sound Railways, has been promoted to the position of general traffic manager of these two roads, and Mr. J. E. Walsh has been appointed general passenger and baggage agent. Mr. Smith is a young man to have attained such prominence in the railway world.

In a letter to the CANADA LUMBERMAN, Hon. J. K Ward, of Montreal, states that fifty-three years ago on the 15th of March last he first went to work in a saw mill, and that he expects to finish up his connection with the same this year. Now 78 years of age, and for more than half a century connected with the lumber business, is quite an unusual record. It is our earnest wish, as well as that of lumbermen in general, that Mr. Ward may be permitted to enjoy the fruits of his labors for many years to come.

Mr. Robert Swim died at Doaktown, N.B., on March 21st. He did quite an extensive lumbering business, entirely on the south-west branch of the Miramichi river and tributaries from 1870 to 1893, when he sold out his lumber business, timber lands, stores and saw mill to Swim & Co., consisting of F. D. Swim, Alonzo Kelly and Henry Swim. He became the second largest stockholder in the Southwest Boom Co., which position he retained until his death. This stock was quite remunerative. After selling out his lumbering business in 1893, he built a wood-working factory and connected with it a carding mill, which he owned and operated also. In 1895 Alonzo Kelly sold out his interest in the business of Swim & Co. to F. D. and Henry Swim, who have owned and operated it since under the name of H. & F. D. Swim.

## THE SPRUCE GALL-LOUSE.

IN view of its increasing prevalence, we give herewith an illustration of the spruce gall-louse which has within recent years been discovered in shade trees and hedges in Ontario, and which, it is feared, will find its way to forests. Numerous specimens have been collected from spruce trees growing in different sections, and there can be but little doubt that it is on the increase. The insect's mode of working is to deposit its eggs at the junction of the needle and the bark, when the wood grows over them, causing an ugly-looking bulb. The young insects feed on the wood until they have developed into flies, at which stage they come forth, and the operation is repeated. Thus, in the course of a couple of years, the tree is ruined.

Dr. Brodie, in a paper published in the last report of the Clerk of Forestry, describes the gall-louse as a very small insect, which causes burr-like galls on twigs of several species of evergreens; the galls are rough and scaly, often two inches long, and in diameter about twice the diameter of the twig on which they are found. They are greenish in summer, becoming brownish towards the fall season, gradually assuming the color of dead spruce foliage. Each gall has from thirty to over one hundred cells and each cell contains from ten to thirty lice, which feed and mature within the cells, and when full grown, about the end of July, the cells open, allowing them to emerge. They then assume wings and can fly a considerable distance. Each one lays from 25 to 50 eggs and dies before winter. They pass the winter in egg form, emerge in the following spring and commence the season's crop of galls.

The small twig on which the gall is formed is quite destroyed, thus retarding the growth of the tree, at the same time giving it a very sickly and unsightly appearance. It would appear, so far as reported, that most injury is done to young trees, such as nursery stock and young growing hedges, and as far as observed in Ontario, the galls were on young trees and on the middle branches of medium-sized trees. But there can be but little doubt that if once established in a spruce forest it would do immense injury. This is something to be apprehended and guarded against. A few insect enemies have been noted, and no doubt many of our smaller insectiverous birds, such as chickadees, nuthatchers and warblers, prey on the gall-louse. But it would seem the main reliance must be on artificial methods of destruction. Spraying has been tried with fair results, but of all methods recommended, hand-picking of the galls toward the end of June, before the producers have emerged, is the surest and best. They are readily seen and should be snipped off with the scissors or knife and at once burned.

SPRUCE GALL-LOUSE.

This destructive insect was first mentioned in American entomological literature in 1869, and since then it has been spreading, and now has a very wide geographical range. Unfortunately it is now in Ontario, and no doubt gradually moving northward towards our spruce forests. Our native trees liable to its attacks are the double spruce, Picea nigra; the white spruce, Picea alba; the hemlock, Tsuga Canadensis; and it is altogether likely it will be found on the balsam fir, Abies balsamea; but so far as yet observed in Ontario it is most common on the imported European spruce, Picea excelsa. As yet there is no positive evidence that this insect will attack the upper branches of full-grown forest trees, but it is most likely it will do so; anyway, there is no negative evidence.

Chermes abietes is a European insect, and has been imported into America on the European spruce; it is common in northern Europe and so is very likely to take readily to our northern forests.

It must be very obvious to every one that the most sensible and efficient way to combat any recently introduced injurious species is to attack it on its first recognition, before it spreads over a wide area. And it would be well for everyone having spruce shade trees and spruce hedges to see that they are thoroughly cleaned of the galls of Chermes abietes in early summer, before the scales open and the producers emerge, and if this cannot be done the trees should be dug up and burned.

---

A. Gagnon, Victoriaville, Que., are adding one of the Jenckes Machine Co.'s standard boilers to their equipment.

William McVicar, McVicar, Ont., is putting a Dake steam feed into his mill. This feed was built by the Jenckes Machine Co., Sherbrooke, with whom the Phelps Machine Co., Eastman, Que., formerly Canadian manufacturers of the Dake engine, have been amalgamated.

Mr. W. N. McEachren, wholesale lumber merchant, Toronto, has removed from the Yonge Street Arcade to larger and more convenient premises at No. 1 Toronto Street. He states that the spring trade so far has been more active than for several years, the local demand for both pine and hardwood being good. The scarcity of dry hardwoods has restricted business to some extent, but the new cut will shortly relieve the situation.

# THE NEWS.

—McLachlin Bros., of Arnprior, Ont., recently added a lath machine.

—W. J. Chisholm has opened a lumber yard at Edmonton, N. W. T.

—Gillies Bros.' new mill at Braeside, Ont., will shortly commence operations.

—The Rathbun Company last week started up their large mill at Deseronto, Ont.

—A large saw mill will be erected at Tusket Wedge, N. S., by J. H. Pothier & Co.

—J. R. Booth, of Ottawa, will have a staff of 1,300 men at work in his mills this season.

McIntosh Bros. are moving their saw mills from Lac La Hache to Quesnelle Forks, B. C.

—D. Davidson, of Penetanguishene, Ont., whose lumber yard was destroyed by fire, is rebuilding the tramways.

—Messrs. Gilmour & Hughson, Limited, of Hull, are making general improvements to their mill and putting in "Dutch" ovens.

—Forest fires are said to have done considerable damage this spring along the line of the Kingston and Pembroke Railway.

—Some fifty men left Pembroke, Ont., on March 24th, for British Columbia, where they are engaged for lumbering operations.

Wharton's saw mill at New Denver, B. C., is to be refitted with modern machinery, and its capacity increased to 20,000 feet a day.

—McLachlin Bros., of Arnprior, are making a number of improvements to their steam mill, and are increasing the height of the refuse burner.

—It is reported that John Law has purchased the lumber yard and stock of W. J. Mathers, at Neepawa, Man., and will continue the business.

—Mr. John Hendry, president of the British Columbia Mills, Timber and Trading Company, of Vancouver, B. B., has returned from England.

—The mill at Lequille, N.S., recently destroyed by fire, is to be rebuilt and fitted as a saw, planing and stave mill, with Mr. G. E. Corbitt as manager.

—The Knechtel Furniture Company, of Hanover, Ont., are enlarging their dry kilns and making improvements which will lessen by one-half the time required to dry lumber.

—The Pacific mill at Tacoma, Wash., the largest shingle mill in the world, operated by Metcalf & Ware, was completely destroyed by fire recently. The loss will be about $100,000.

—The price of rubber, which has been for some time advancing, is now so high that the Canadian rubber factories have resolved upon an advance in prices of rubber shoes and other products.

—Joseph Guilbert, of Windsor Mills, Que., is making extensive additions to his mill and has placed an order with the Jenckes Machine Co., Sherbrooke, for a large quantity of shafting, log handling apparatus, etc.

—A dispatch from Grand Rapids, Mich., states that the furniture manufacturers have adopted resolutions against the two dollar lumber tariff and have sent them to Congressman Smith. They want a reciprocity treaty.

—The largest mahogany log ever received at the timber yards at Liverpool, England, was recently on exhibition in that city. It was 21 feet long, six feet deep (having been squared), and weighed about 15 tons. It grew in Africa.

—Dr. Brodie recently brought to the Department of Forestry in Toronto a sample of a scale pest that is affecting pine trees. It is said to have been discovered only recently, and to have attacked Austrian, Scotch and red pine trees.

—The Bronson & Weston Company, of Ottawa, will only operate one of their mills this season. They have completed the placing of the carriers for the disposition of the saw dust, which will probably be sold to the E. B. Eddy Company.

Messrs. Curry Bros. & Bent, Calder & Son and H. J. Crowe have been granted, by the Newfoundland government, the privilege of lumbering in Labrador over a section consisting of 320 square miles of excellent timber land. They will ship to the European markets.

—The Rat Portage Lumber Co., of Rat Portage, Ont., are this spring expending in the neighborhood of $13,000 in special improvements to their mill. These include a large Wickes gang in mill No. 1, and additional machinery and power in the planing mill and sash and door factory.

—An illustration of what can be accomplished by intelligent forestry methods is shown by an engraving in the March issue of the Forester, which shows a German spruce forest, sixty to eighty years old, ready for the axe, with no less than 400 trees and 12,000 cubic feet of solid wood to the acre.

—Mr. J. Fraser Gregory, who has been in the employ of Mr. W. H. Murray, St. John, N. B., for seventeen years, has been admitted as a partner in the business. The new firm will be known as Murray & Gregory, and will deal extensively in spruce and pine, as heretofore, their mills being known as the Marble Cove Mills.

—Knight Bros., of Burke's Falls, Ont., have been compelled to increase the capacity of their dry kiln. A new hot air conductor has also been added, which provides for the hot air being blown from the engine room immediately in rear to the extreme end of the kiln, and after a circuit of the kiln is sucked in by the same fan by which it was first emitted, thus doing away with the old necessity of heating cold air periodically.

—The Weymouth Free Press tells of some record-breaking logging on the Sissiboo: Mr. Chas. Sprague with a yoke of cattle trailed four trees, equal to 1750 feet of lumber, on a four turn road at Chubb Brook. Samuel Thipault, with one yoke of cattle, trailed 8 trees, equal to 1646 feet of lumber, at Big Dead water. Livingstone, Steele & Gaudet, with one pair of small horses, hauled 10 trees on double sled, equal to 1700 feet of lumber, at Second Lake.

—Mr. W. T. James, of Hamilton, Bermuda, writing to the CANADA LUMBERMAN regarding the lumber trade, says: "Southern pitch pine from Georgia and Florida is chiefly used in Bermuda. Our houses are built of stone —no wooden structures. Joists, floors and roofs are of southern pitch pine; white pine is chiefly used for fittings, doors, architraves, mouldings, etc., being chiefly imported ready worked, and glazed sashes and outside blinds are also imported ready made. Considerable spruce lumber is used, such as inch rough boards, scantling of various sizes from 2 x 3 up to 4 x 12, also considerable pine, inch boards and 1½" and 2" planks.

## CASUALTIES.

—Jacob Bloom, of Glencoe, Ont., was killed in his own mill last month by being thrown upon a saw.

—A son of Mr. Gagnon, lumber merchant, of Quebec, was killed by a pile of deals falling on him.

—By an accident at the sash and door manufactory of W. Baril, Montreal, Athanase Dubois had the bone of his left arm sawn in two at the elbow. A piece of timber which he was feeding to the machine slipped and drew his arm across the saw. Amputation was found necessary.

—David Hollowood, of Clarendon, had his right leg broken while working in Thompson & Avery's limits. His companions were in danger of being struck by a falling tree, so he put up a pike pole to divert its direction. The pole slipped and the tree fell upon him, with the above result.

## TRADE NOTES.

The E. R. Burns Saw Company, Toronto, will shortly be succeeded by E. R. Burns & Company.

The Shipton Electric Light and Power Co., of Danville, Que., have received a Crocker turbine from the Jenckes Machine Co., Sherbrooke, who are proceeding with the installation of the same, together with the penstock and draft tube.

Two more 252-inch looms for making felt have been recently added to the plant of Hamelin & Ayers, Lachute Mills, Quebec. This makes six looms of this size now working in their mills.

The Kenneth Mining and Development Co., at Rossland, are making an addition to their equipment in the shape of a 7 x 10 double cylinder hoisting engine, with boiler and all appliances complete, supplied by the Jenckes Machine Co.

The agency for Canada for Dick's Balata belting is now fully controlled by J. S. Young, 15 Hospital street, Montreal, by appointment of manufacturers. Orders will be attended to at once from a large and varied stock.

The Electric Reduction Co., Buckingham, Que., are proceeding to develop their water power, and as a first step have placed an order with the Jenckes Machine Co., Sherbrooke, Que., for a pair of their 45" Crocker turbines, to be installed complete, with wheel cases, draft tubes, governor, etc.

The Jenckes Machine Co., Sherbrooke, are furnishing the Canadian Rand Drill Company with a handsome compound Corliss air compressor, weighing some 33 tons, together with a large air receiver and other accompanying apparatus, bringing the total weight up to about 40 tons.

The Moore & White Co., of Philadelphia, manufacturers of cltuch pulleys, couplings, etc., have appointed the Lancaster Machine Works, of Lancaster, Ont., as their representatives in Canada, from whom all particulars regarding these justly celebrated friction driving devices may be obtained.

The B. C. Goldfields Co., of Toronto, have recently placed an extensive order with the Jenckes Machine Co. for a ten stamp battery complete, with two vanners, two ore feeders, grizzly, Blake-Marsden crusher, and all the various apparatus making up a complete modern milling plant. The outfit is to be delivered at Nelson, B. C.

The Wm. Hamilton Manufacturing Company, of Peterboro', Ont., are supplying the entire equipment of a mammoth saw mill which the C.P.R. are erecting at Coal Creek, about 60 miles west of McLeod, in the Dougals fir district. The equipment of the mill is of the most modern type, and it will have a capacity of 100,000 feet in ten hours. The plant includes a battery of 6 boilers, bandsaws, etc.

# WOOD PULP DEPARTMENT

## PROPOSED PULP MILL AT MISPEC.

The St. John Sulphite Pulp Company, which is composed of Scotch capitalists, has commenced the erection of a large pulp mill at Mispec, near St. John, N. B. The manager is Mr. M. F. Mooney, of St. John, who returned last month from a visit to Scotland, where he completed the final arrangements with the directors for proceeding with the work.

The mill will be a large brick and stone structure, three hundred feet in length and one hundred feet high, and will be supplied with a modern pulp making plant. The large steel boilers and acid reclaimers will be imported from the United States, but as far as possible Canadian machinery will be used. The site on which the mill will be built is an advantageous one. It is not far from the Bay of Fundy, making the shipment of goods comparatively easy. The manufactured pulp will be conveyed to St. John in barges, and thence loaded on steamers and vessels for Glasgow. The site is most desirable also for the purchase of wood.

## THE MANUFACTURE OF SULPHITE FIBRE.

Whitney, Ont., March 28, 1898.

To the Editor of the Canada Lumberman:

Dear Sir,—I am pleased to know that another sulphite pulp mill is to be built in New Brunswick this spring, at Mispec, by a Scotch company, and probably another in St. John, which I hope will materialize shortly, and possibly a large pulp and paper mill in the Province of Quebec. This goes to show that the Canadians are now beginning to realize that they really do hold the key to the pulp industry of the world. On this latter point I am thoroughly satisfied, provided there is an export duty put on pulp wood. It is pretty generally known, or I might say well known, that the Provinces of New Brunswick and Nova Scotia possess the finest black spruce in the world, which is the best timber for the manufacture of sulphite pulp. This wood possesses a long and strong fibre, which is no doubt due to the climate of the provinces. A large quantity of pulp wood has been shipped to France, for the large pulp mills there, and so it would appear that all that is wanted now is a few more pulp mills, so that the pulp can be manufactured in Canada and sent over to Europe in place of the raw material.

During the past year I have been asked many questions in reference to the manufacture of sulphite fibre by different parties who are considering the building of sulphite pulp mills, as to the cost of building, etc., and as your valuable paper no doubt reaches most of the parties interested, I feel sure that to give a few lines on the manufacture and cost of plant in your paper would be appreciated, if you will kindly give me space.

To manufacture a ton of first-class sulphite pulp requires 2½ cords of wood, 400 lbs. of sulphur, and 280 lbs. of lime. In preparing the pulp wood it is first cut into lengths of from 24 to 30 inches, as desired, and the bark taken off by barking machines; then the wood is split by a splitting machine to see if the piece is sound, the knots are next bored out and the wood taken to the chipping machine, where it is cut up, and from this machine the chips are delivered into a breaking machine, which breaks them all up into a uniform size, then onto a screen where all the sawdust is shaken out, and from there on a conveyor to the chip bin above the digestors, where they will be ready for use. This plan of preparing the wood will be found to give the very best results, care, of course, being taken to have nothing but good sound wood.

Next comes the making of the acid, which is a very important part to have right in a sulphite mill, and great care should be taken to have the acid absorbing tanks and settling and storage tanks and all connections perfectly air tight, and with all made perfect not over 400 lbs. of sulphur should be burned per ton of pulp. The sulphur is burned in cast iron ovens made for the purpose, and the sulphur gas passes off into lead pipes, submerged in cold water, which is constantly being renewed, and as the gas passes through these pipes to the acid absorbing tanks, it is cooled down to a temperature of 80 or 90 deg. Fah. It then enters the acid tanks, where it is drawn through and mixed with the limewater, which flows continually through these tanks, and all brought up to the proper acid test, then to the settling and storage tanks ready for use.

In preparing the limewater for use 250 lbs. of lime is slacked in an iron or steel tank, then run into mixing tanks, where the necessary amount of water is added to bring it to the proper gravity, and from these tanks it flows through the acid absorbing tanks, where it is mixed with the sulphur gas.

Now, with the wood prepared and the necessary amount of acid made, the digestors are filled with chips, the necessary amount of acid put in, the steam turned slowly on, and the cooking goes on for 11 or 12 hours, until the pulp is cooked. It is then blown off into blow tanks, well washed with filtered water, then washed out and passed through coarse screens over the riffers, through fine screens again and over the paper machine into paper pulp, ready for shipment.

All the machinery to equip a first-class pulp mill can be made in Canada, just as well as in any other part of the world. Messrs. John Bertram & Sons, of Dundas, Ont., can build as fine a paper pulp machine as desired, as well as all the wood-working machinery required in the wood preparing room. The digestors can be purchased from several firms; E. Leonard & Sons, of London, Ont., can build them, also Carrier, Laine & Co., Levis, Que., and no doubt the Bertram Engine Works, of Toronto. The other machinery, such as engines, and boilers, etc., can also be obtained in many places in Canada.

In New Brunswick a 30 ton mill can be built for $130,000. There is a great demand for sulphite pulp in England; a first class fibre will bring $50 a ton, while the cost to manufacture in Canada is $20 per ton, and freight to British port $5 per ton. So I think, Mr. Editor, that capitalists who would put money in a good pulp mill would make a good investment.

Respectfully yours,
Thos. R. Allison.

## PULP NOTES.

The Dominion Paper Co., Kingsey Falls, are setting up a new wet machine, one of the Jenckes Machine Co.'s standard 72" wet presses, shipped them a week or two ago.

The importation of wood pulp into France during last year was practically the same as the year before, viz., about 115,000 tons. In 1895 it was 124,000 tons. It is not considered, however, that the activity of the paper trade has diminished, the reduced import being compensated for by home production.

The Jacques Cartier, Pulp and Paper Company have secured letters patent incorporating E. Goff Penny, M.P., Robert Archer, William Strachan, William Curtis and Robert Law, of Montreal, to carry on and operate the business of manufacturing pulp and paper in all its branches, and to build saw mills, railways, etc. The capital stock is $50,0000, and the proposed works will be located on the Jacques Cartier river, in the province of Quebec.

The Royal Paper Mills Company have recently added a complete rope drive to their transmission machinery at their East Angus mill. This was furnished by the Jenckes Machine Co., Sherbrooke, Que., who are furnishing the entire tank work, together with the accompanying machinery. East Angus presents a scene of great activity, carload after carload of material arriving and being placed in position. When completed this mill will take a prominent place among the producers in the pulp and paper trade.

In a recent address, Professor Fernow, chief of the forestry division of the Department of Agriculture, gave some statistics as to the development of the paper pulp industry in the United States, which has practically all been accomplished within the last dozen years. The first pulp mill in America was established thirty-three years ago, and the increase in production was slow, until a much later period. Now it is estimated that the product is over one and one-half million tons, about two-thirds ground and one-third chemical pulp, this product requiring in the neighborhood of 2,000,000 cords of wood. The product of 1896 was 911 per cent. that of 1882. Such an industry is fast making inroads upon the timber supply most suitable, spruce furnishing by far the larger proportion of it.

DICK'S Patent Driving Belts

GUTTA PERCHA, CANVAS AND BALATA

ENORMOUS GRIPPING POWER :—: NO SLIPPING OR STRETCHING

STEADY SMOOTH WORKING. Has proved by far the Best and Cheapest for Pulp and Paper Manufacturing. NO LOSS OF TIME. The Only Belting that can work in Dampness and give No Trouble. Unexcelled for Cone Working.

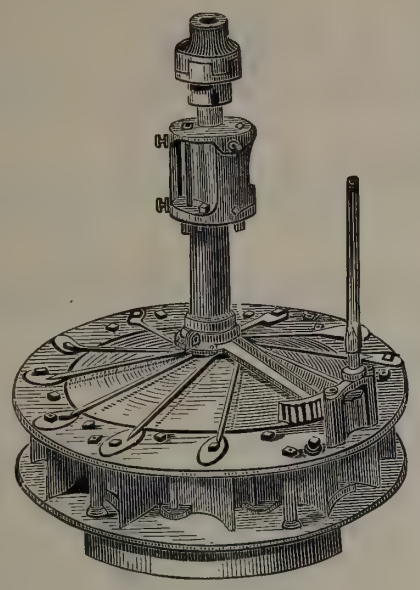
At a recent sale of Quebec timber limits the Chicoutimi Pulp Company purchased several miles of spruce limits.

A bill incorporating a company to build and operate a pulp mill at Weymouth, N. S., has been passed by the legislature.

It is probable that a pulp mill will be built at Moose River, near Parrsboro, N.S. The property, which consists of about 15,000 acres, is owned by Ex-Mayor M. L. Tucker and Messrs. Huntley and Epps, and is said to be one of the very best sites for pulp wood in the provinces.

Readers are asked to contribute freely to the columns of the CANADA LUMBERMAN, and to send in items of news whenever possible. Let each subscriber resolve to report the news of his locality, such as changes of ownership, mill improvements, market conditions, etc., and the whole will comprise a valuable compendium of information.



NOW is the Hey-Day of the Water Power. Streams that flowed passively for ages are being turned to man's account by the Turbine Water Wheel. Of the making of Water Wheels there is no end, but the one to equal in **EFFICIENCY,** under any conditions, the

The DAKE STEAM FEED

Embodies the following Advantages:

SIMPLICITY OF CONSTRUCTION,
POSITIVE AND EASY MANAGEMENT,
ECONOMICAL USE OF STEAM,
SMALL SPACE OCCUPIED, CHEAPNESS,
EASY ADAPTATION TO EITHER NEW MILLS OR THOSE NOW IN USE.

The movement of the engine in either direction is under the absolute control of the sawyer, thus accomodating the speed of the feed to the size of the logs.

Mill men who have used other makes of Steam Feeds comment favorably on the economical use of steam of our feed over others.

# R. H. SMITH CO., LIMITED

## St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

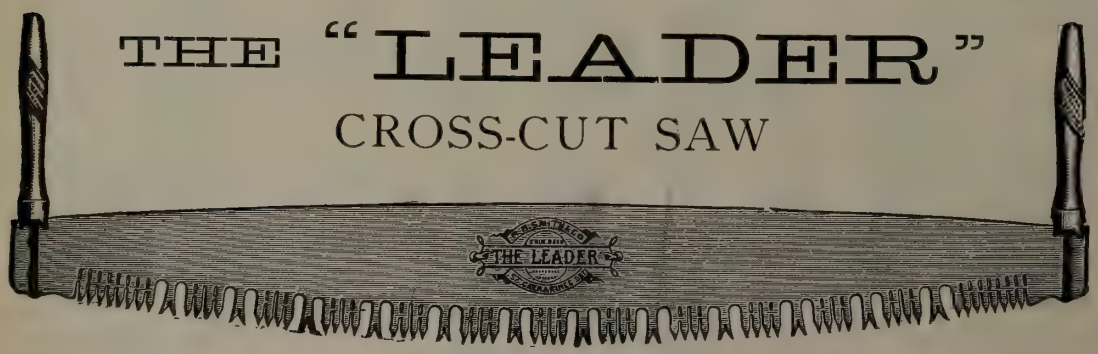
R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.

## THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

## A DISTINGUISHED LUMBER DEALER.

ONLY twelve years ago Mr. E. H. Lemay, whose portrait appears on this page, established himself as a wholesale lumber dealer, yet in that brief period he has risen to a position almost of preeminence in the white pine trade of Canada. To-day he stands as one of the leading exporters, with a record which could only have been attained by unceasing perseverance, sound judgment, and close attention to business.

On the first of January last Mr. Lemay celebrated the fiftieth anniversary of his birthday. For years previous to 1886 he was in the employ of the E. B. Eddy Company, of Hull, Que., who, as our readers know, were among the pioneers in the lumbering industry in Canada. While thus engaged he obtained much practical experience which was found very valuable in after years, and to which is due, in some degree, the success which he has attained. He also enjoys the distinction of being one of the best salesmen in Canada.

It is said that Mr. Lemay carries the largest stock of lumber in Canada, often holding as much as thirty million feet, representing a valuation of half a million dollars. Although operating no saw mills, he frequently purchases the entire cut of large mills in the Ottawa valley and elsewhere, shipping the stock to Great Britain and the United States. At the present time his attention is mostly devoted to the former market, owing to the depression in the United States trade incidental to war complications. His selling agents in New York are Messrs. W. M. Crombie & Co.

The progress which has been made of late years in the export of lumber from Canada to European countries is due to the enterprise of a comparatively few exporters, none of whom deserve greater credit than Mr. Lemay. It is hoped that for many years to come he will continue to enjoy the prosperity which has characterized his trade during the past twelve years. Personally, he is held in high esteem, and many warm friends have been made by his kindly and charitable disposition. His headquarters are in Montreal, where he is a member of the Harbor Commissioners, appointed by the Canadian government, a member of the Board of Trade and Corn Exchange, and a director in several large companies.

---

The Winnipeg Commercial says that a side industry of the Rat Portage Lumber Company is the sash and door factory, yet it has a capacity of 100 doors and 250 windows per day, having almost doubled its output in the last year by the addition of more machinery. The machinery is all specially made, of most approved type, and is constantly being added to. It is charge of C. A. Moore, formerly of Brandon, Man., and some 20 or 25 men and boys are employed. The requirements of the trade keep the staff constantly busy to keep up with orders, and it is quite possible that eastern or imported stock will be practically shut out.

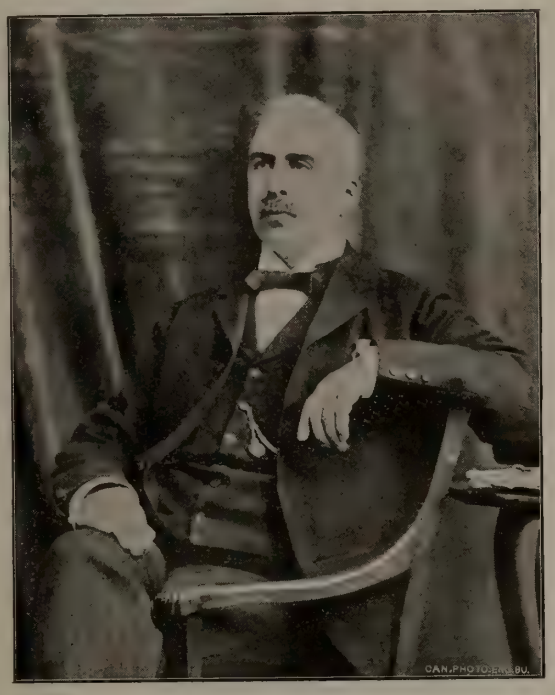
## PETITION FOR AN IMPORT DUTY ON LUMBER.

WE are pleased to notice that the recently reorganized Lumbermen's Association of Ontario has promptly set to work to try to remedy some of the disabilities from which the trade is suffering. The large importations of cheap grades of lumber from the United States are seriously affecting the interests of Canadian lumber manufacturers in western Ontario and the western provinces, and it is fitting therefore that the Association should have immediately turned its attention to this important subject, by forwarding to Sir Wilfred Laurier the following memorial :

TORONTO, ONT., April 18th, 1898.

To The Right Honorable Sir Wilfrid Laurier, G.C.M.G., C.B., Ottawa, Ont.

DEAR SIR,—At a recent meeting of the Lumbermen's Association of Ontario, a resolution was passed unanimously approving of the principle of charging the same duty on lumber entering Canada as charged by the United States on lumber entering their country, viz., $2 per M. feet on sawn lumber, 30 cents on shingles and 25 cents on lath, the same as in the wood schedule of the Dingley Bill.



MR. E. H. LEMAY.

But in order that the change may be made in our tariff with as little friction as possible, we offer for your approval an amendment to clauses 328, 329 and 611, as set forth in the enclosed memorandum. The members of the Association expressed their willingness to have free trade in lumber, but under existing circumstances of a $2 duty on lumber entering the United States market, and the Canadian market free, the conditions are too onerous and one-sided to be endured with equanimity for any length of time. The situation is aggravated by geographical and transportation problems incident to our extended frontier and by the import and export of saw logs. After mature consideration, and giving due weight to all the interests involved, we pray that your government may take action by amending the three clauses in the Canadian Tariff now submitted to you.

A strong feeling of injustice rests in the mind of lumbermen since the passing of the Dingley Bill," and as the time has come round when redress may be obtained, we have the honor to ask that you will be pleased to consider favorably the request now submitted by the Lumbermen's Associaton of Ontario.

A copy of the suggested amendments to the tariff appeared in the CANADA LUMBERMAN for May.

A memorial has also been sent to the Dominion government by the legislature of British Columbia asking that an import duty be imposed on lumber.

As no changes whatever have been made in the tariff at the present session of the Dominion Parliament, the lumbermen's views have not been met. It is to be hoped, however, that in the near future the government will remove the disadvantage which Canadian lumbermen are now placed under by reason of the free admission of lumber from the United States.

The duty of the lumbermen whose interests are affected is clear. They should strengthen the hands of the Association which is fighting their battles. The evils which affect the trade can be righted only by united effort. The time has arrived when lumbermen should cultivate each other's acquaintance, and in matters of this kind affecting their welfare, act in association rather than as units. In all other branches of manufacture and commerce the wisdom of this course has been recognized and acted upon. The lumber trade must either fall into line or suffer the consequences.

The first step in this direction has been taken in the re-organization of the Ontario Lumbermen's Association. The machinery is now available for united action, but more than this is required. The Association cannot successfully accomplish its purposes in behalf of the trade unless large numbers of the lumbermen of the province become members and take a personal interest in its affairs. The Association aims to promote the interests of the trade as a whole and as far as possible of every man in the trade —hence it should receive the active support of all.

The work of the Association must not be thrown entirely on the shoulders of the officers and a few enthusiastic members. If that is done, these men will in time become weary and discouraged under their unnecessarily heavy burden, and the Association will collapse or relapse into desuetude. An association with a weak and half-hearted membership will fail to command respect or to exert much influence. On the other hand there are few objects that cannot be accomplished by an association which has the active support of a majority of the best men in the trade, and which does not act spasmodically as the result of a suddenly threatening danger, but is constantly on the look-out and putting forth efforts for the welfare of the interests of its members and the trade which it represents. With the assistance of all progressive lumbermen the Ontario Lumbermen's Association may become such an organization.

## THE LIFE OF BAND SAWS.

By A. J. Burton, Algonquin Park, Ont.

[Article II.]

The length of time a band saw will live and do good work depends much on the care in handling; they are much like a man or a horse—if you feed them properly and they are well taken care of, they will usually last a long time. If a saw is all right on being received from the maker, and if the filer looks it over every second or third time it comes off the mill, and keeps it all the time in proper shape it will run until worn out, without a crack, and cut at the rate of 50 M per day, providing it does not meet with accidents.

I ran four saws one year on a Clark band mill in Pennsylvania, cutting from 50 to 55 M per day of hemlock, and left them all in good order less the wear, except that one of the saws had two cracks in front edge, which was my own fault, as I let the tension get out too near the front edge. But saws cutting logs containing iron or stones, or getting pulled off wheels, or ill-used in the file room or by reckless sawyers, will last and do good work only in proportion to the care they receive. The filer must keep the tension even, the saw flat and straight, crown in back even, use right amount of swage, not allow case hardening from any cause, see that the lap is always straight, not run too long or too slim teeth, see tha the mill is in line with the track, and the wheels in line with each other, and success will follow the mill owner and filer also.

### THE SPEED OF BAND SAWS.

As a result of my experience with band saws for log sawing, having fitted saws to cut almost all kinds of timber grown in Canada, United States, Central and South America, I would recommend that saws run 10,000 feet per minute in white pine, fir, spruce, poplar, cucumber, chestnut, linnwood, basswood, whitewood and any other soft woods; 9,000 feet per minute in hemlock, cherry, red oak, beech, birch, tulip, palmetto, North Carolina pine, yellow pine, red pine, cypress and any other medium soft woods; 8,000 feet per minute in maple, white oak, blue oak, gum, horn beam, ironwood, elm, yellow ash, Hungarian ash, South American mahogany, box wood, Spanish cedar, satin wood, amaranth, cycamore, black walnut, North Carolina red birch and all similar hardwoods. Use a short tooth, with 1¼ inch space and not much hook, and do not run over 6,000 feet per minute in rosewood, lignum vitae, cocobolia, black ebony, Cuban mahogany, palmavese, black palm, leopard wood, pelansee, or vermilion wood, etc. I have filed band saws to cut all the above woods and can speak from experience.

You will observe that in my letter in the May issue I spoke of saw makers not being expected to furnish saws to be used for from six to nine months and then condemned, and I wish to say that saw makers as a rule, are not half careful enough in finishing up a saw before shipping it to the mill, for I doubt if there is one saw manufacturer in the United States or Canada that turns out a band saw in proper condition to run on the mill. I find that new saws from the factory are not flat either lengthwise or crosswise, but there are usually more lumps running crosswise of the plate. This is due to the excessive use of the crossface hammer while smithing, and saw makers do all their work on the anvil. In order to level a saw as it should be, it requires a good solid leveling table, say 4 inches thick, 6 feet long and 12 inches wide; then, with a high hammer, say 2 pounds, all the little lumps or ridges could be taken out. Another reason that new saws are not in proper shape to run is because they are very uneven in tension and there are tight and loose spots; they are tensioned too near the edges in some places, and in other places are too stiff, and the back edge is not always perfectly true. This will cause a saw to oscillate on the wheels, and this, with the unevenness of the plate, is the cause of so many new saws cracking the first or second time they are used, and then condemned as no good by the mill man and filer; where, if the saw had been properly put up when it left the factory, it would have run and cut well without cracks.

If the filer finds the saws in good order when received from the maker, he will advise the manager to so order from the same company. Now, suppose a lot of new saws are received at the mill, and they are not at all in proper condition to run without cracking. The filer will most likely look them over to see how they are put up, supposing that because they are new they are perfect, and if the filer is not a thoroughly practical man, it is ten to one if he does not try to hammer the saws just as they were when they came from the factory, and in a short time the saws will be full of cracks, and the filer will tell his employer that the saws are worthless. The result is that the saw maker is written to about it; he writes back to the mill man that the saws were made of good steel, well tempered, etc., and claims that the cracks were due to the fault of the filer, but all in vain, the saws are returned, and the saw maker loses the sale and the filer his reputation, while the mill man loses both time and money in trying to run his mill with a lot of inferior saws. If the truth was known the trouble is with the saw maker, because he did not have a thoroughly experienced band saw filer to look over his saws and see that they were in the best possible condition to do good work before shipment. Saw makers will say that they employ men who have had a long experience in making saws, and who are good with the hammer. This may all be, but it does not make them capable of putting a saw in good shape to run on the mill, for they have not had the experience in the mill, and none but a good practical band filer can do it.

In my eleven years experience with band saws, I have filed saws for twelve different makes of mills, and the course I have outlined is the one I follow, which I find gives the best results, and a saw put up as described will do good work and not be likely to crack. I would be pleased to hear from other filers also as to their ideas and methods of working. I am always ready to try anything new that will have a tendency to improve the cutting of my saws.

## TRADE PROSPECTS IN JAPAN.

The complete report of Mr. George Anderson, Canadian Trade Commissioner to Japan, has been printed for distribution by the Department of Trade and Commerce. It occupies 42 pages of the usual size of the government blue-books, and contains much valuable information regarding the possibilities of trade with that country. Following are extracts from the report:

Lumber.—The demand for lumber of all kinds is simply enormous, and this will certainly be one of Canada's largest exports to Japan, and the saw-mills of British Columbia should be eager to supply the eastern trade. The Japanese are constantly building. their houses being constructed entirely of wood. The specifications sometimes asked for are large sizes and long lengths, as the contractors desire to cut by hand-saw into the sizes required for building. Douglas fir (British Columbia pine) is considered very satisfactory, and cargoes of common lumber will find a market. There is also a large demand for large lumber for docks, ship-building, bridges and government works. The sizes required for railway ties are: length, 7 feet; width, 8½ inches; depth, 4¾ inches. Pit props (round poles) for use in coal mines, vary in size from 6 to 12 feet in length, and from 5 to 10 inches in diameter, the annual consumption running into hundreds of thousands of pieces. Lumber is also required for all kinds of packing cases, box shooks, tea boxes and other purposes. Ornamental wood, such as maple, oak, red cedar, etc., for wainscotting, panellings, ceilings and interior decoration of houses, as well as for use in manufacturing furniture and railway carriages, would find a ready market at good prices. The Japanese are exceedingly tasteful in the interior decorations of their residences. The forests in the main islands are considerably denuded, and the government are insisting on the planting of trees for every one cut down. In quoting, Canadian correspondents cannot be too particular in showing the exact cost in gold at point of destination, and I would recommend sending a pro forma invoice naming price on rail of vessel at mill, and showing freight, exchange, insurance and interest while in transit.

Shingles are used extensively for roofing purposes, being nailed on the sheeting and then covered with mortar, tiles being put on over all. For this purpose No. 2 and 3 quality should find a very large sale. They are also used in the northern part of the Main Island and in Hokkaido, the Northern Island, in the same way as in our own country, with this difference, that bamboo strips are put across the row, the strips being held on by large flat stones, instead of each shingle being nailed. A better quality would be required for this latter purpose.

Staves and Heading.—There is a very large number of people engaged in the cooperage business, manufacturing cement, sake and other barrels, tubs, firkins, pails and all classes of woodenware. Our large stave and heading manufacturers, who are shipping to other eastern countries, will, I am sure, find a large market in Japan, as the preparation of coopers' material by hand is very laborious work.

Pulp.—Paper making is a large industry in Japan, and wood-pulp has already been received from Germany and Sweden. If satisfactory freight rates can be obtained, Canada can readily command this trade with the magnificent resources she possesses in this valuable product.

Furniture.—Furniture is cheaply made in Japan, but the wood being quite unseasoned, it is very unsatisfactory, and there would be a limited demand for all classes of furniture prepared in the white, shipped in the knock-down, and ready to be put together and finished on arrival in Japan. There is a demand for strong, cheap chairs; the backs and legs would require to be lower than usual to suit the Japanese stature, and two flat bars attached to the foot of the legs to protect the Tatami mats which are universally used in all Japanese residences. Office furniture and appliances, to a limited extent, could be introduced to European and Japanese merchants and manufacturers. Many of the better classes of Japanese, when building, are furnishing one European room, and I look for some considerable development in the furniture trade.

Machinery.—A tremendous development in this direction and likely to increase rapidly, as machinery is being introduced at a very fast rate, and sure to continue. The business is done by Great Britain, Germany and the United States, and consists of engines, boilers, mining, paper-making, spinning, and all kinds of machinery. I would fondly hope our manufacturers would take steps to secure a fair share of orders for the particular lines which they manufacture. It can only be handled by a special and competent salesman well up in this particular branch.

Wood-Working Machinery. — American firms are represented in this line. There will be considerable sale of planing, dove-tailing, band-sawing, mortising and all kinds of wood-working machines, as they are just commencing to be introduced.

Pulleys.—With the increasing introduction of machinery, there will be a large sale of all kinds of pulleys, and I am strongly of the impression that the light wood-split pulley will find a very extensive sale, if properly introduced by a specialist.

Boilers.—Steam boilers are being imported in considerable quantities from England, and the demand will continue, as there is a strong desire on the part of the Japanese to establish manufactories of various kinds throughout the country. I would advise that rolled plates, marked, ready to be put together on arrival in Japan, would be the best means of transporting boilers, as space in vessels is rated at 40 cubic feet to the ton, and it would be desirable on items of this kind to save freight.

Boiler Covering.—Manufacturers having steam plants are realizing the importance of retaining the heat in their boilers and pipes, and are using increased quantities of asbestos, mineral wool and mica coverings. The demand for these goods will be large.

Belting.—With the very rapid introduction of all classes of general machinery, there is a very large sale of leather and rubber belting, and the demand is likely to increase from year to year as factories are established. Leather is imported, and belting made in Japan, as it is deemed more economical than to carry large stocks made up, but it is considered inferior to the imported article. There are no gutta percha or rubber goods manufactured in the country, and there is a promising future for the belting trade both in leather and rubber.

Freight Rates from Canadian Ports to Japan.—On merchandise weighing 500 pounds or less per 40 cubic feet measurement, $15 per ton measurement; 750 pounds or less, $17.50; 1,000 pounds or less, $20; 1,250 pounds or less, $22; 1,500 pounds or less, $24; 2,000 pounds or more per 40 cubic feet, $1.25 per 100 pounds actual weight.

Import Duties.—Steam boilers, engines and parts thereof, 25 per cent. ad valorem; machinery of all kinds not elsewhere specified, 10 per cent.; belting, 10 per cent.; furniture, 20 per cent.; pulp for paper-making, 5 per cent.: timber, lumber, boards and planks, etc., 5 per cent.

To show the growth of the Japanese market, Mr. Anderson states that in 1887 the imports into that country were valued at 44,304,251 yen, or about $22,000,000, while in 1896 they reached more than 171,674,474 yen. (The yen is equal to 50 cents.) He also gives suggestions as to what course should be pursued by Canadian manufacturers to secure foreign trade.

Duncan A. McRae, of Wolfe Island, has been appointed government land agent and timber viewer in the Yukon district by the Dominion government.

## RETIREMENT OF MR. ROBERT THACKRAY.

THE friendly relations existing between Mr. Robert Thackray, of Ottawa, and his employees, were exemplified on the 30th of April last, when, upon the occasion of his retirement from active business life, he was presented by the employees of the firm with an address and a handsome gold watch. The address, which was read by Mr. E. P. McGrath, was as follows :

DEAR SIR,—On the occasion of your severing your connection with the active work of your factory we desire to express to you our sincere appreciation of the many kind nesses which we have received at your hands during the years when we have been associated together and our regret that the pleasant connection between you, as our employer, and ourselves as employees, is about to be broken.

"Some of our number have been continually in your employ for twenty years, and others but a shorter time, but all can unite in saying that the relations which have

MR. ROBERT THACKRAY.

existed between master and men have always been of a most friendly character.

"Those of us who know you best have most to say in your praise and we can all recall many acts of kindness from you which showed your thought of your men was of a deeper character than our simple business connection.

"The understanding between us is shown by the fact that during all the years of our connection we have never had any unpleasant disagreements, which in other places have taken place between the working men and their employers.

"And now when the time has come when these pleasant relations are to cease, we ask your acceptance of the accompanying small token of our regard for you, feeling that though not so closely connected in business, that in any time of need, we can find a friend in the one who has so long been our employer.

"We unite in extending to you our best wishes and our hope that you may be spared to years of usefulness and to the performance of those kindly acts which have always made your employees look to you as a friend."

Mr. Thackray expressed his gratitude for the gift, and for the kindly words contained in the address, in the following poetical fashion :

Words fail entirely to express
My thanks to you for this address,
So take the action for the word ;
I bow ; to speak would be absurd.

Well I remember in past years
You shared my cares and hopes and fears,
When friends were few, and I in need,
You often proved a friend indeed.

When fortune frowned upon our will,
And fire disastrous burned our mill,
Your sympathy expanded then
And kindness made us better men.

Farewell. May we forever be
In bonds of closest sympathy ;
Let us each others burdens bear
Until we reach that higher sphere.

### PERSONAL SKETCH.

Mr. Robert Thackray was born at Leeds, England in the year of the Queen's coronation, 1837. At 15 years of age he was apprenticed in Leeds to the carpenter and joiner trade, and at the age of 21 years, on reading of the bright prospects for young men in Canada, and of the Queen's decision to make Ottawa the seat of government he decided to come west. Landing in Ottawa in 1858 with a small clothes box, a carpenter's tool chest and four English shillings in his pocket, Mr. Thackray worked at the carpenter's bench for five years. In the interval he married a Mrs. Davidson, a young widow, and by strict economy saved enough to start a small sash and door factory, which has now grown to be one of the most extensive and best equipped establishments in Canada, shipping large quantities of pine doors and box boards to Great Britain and other foreign countries. His business premises have twice been burned to the ground, entailing severe losses, but he has always managed to pay 100 cents on the dollar. The business at present employs 125 hands.

Some years ago Mr. Thackray bought timber limits on the Quyon river, Pontiac Co., Quebec, and built a saw mill there, the product of the mill being shipped to Ottawa to be manufactured into doors, sash, etc.

His family consists of one son, one daughter, and two step-sons, all married. He has now retired from active work, leaving the business in the sole control of his son and step-son. The name of the new firm is Davidson & Thackray.

## THE SWEDISH TIMBER INDUSTRY.

IN a recent special issue of Timber, London, Eng., Gustaf Peters has an interesting article entitled "A Short Survey of the Development of the Swedish Timber Industry," which is well written and very interesting. The export timber trade was commenced, according to this author, about sixty years ago, the first steam saw mill being erected in Sweden in 1848. It is said to have caused a complete revolution in the trade. At the time this mill was built the total export from Sweden of sawn wood was 132,000 standards, of the value of about 13,000,000 kroner (one kroner being equal to nearly 27 cents). Twenty years later it had reached 550,000 standards, valued at 50,000,000 kroner, while in 1896 about 1,100,000 standards were exported, of the value of more than 100,000,000 kroner. The export was chiefly to Great Britain. The freight from the Baltic to London varied during the first decades of this century from £5 to £10 per standard. The import duties in England from 1820 to 1831 were about £13 9s per standard for sawn timber and £9 15s for hewn timber ; and in 1842 the duty was reduced to £5 and £3 12s respectively, and ten years later it was further reduced to £1 10s and £1 2s 6d. In 1866 it was abolished altogether. To show how little of the high price paid went into the pockets of the producer, the following details of a shipment made in 1820 are given :

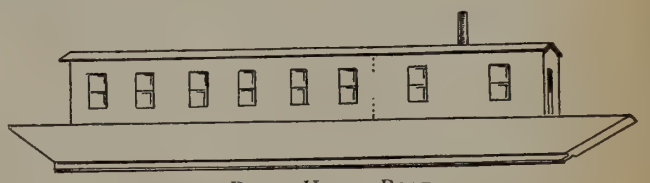
| | | |
|---|---|---|
| 100 standards deals sold to London.. | | £2,864 |
| Deductions : | | |
| Freight..... | £ 448 | |
| Duty..... | 1,990 | |
| Sundry expenses in London..... | 102 | |
| Commission and del crede ..... | 143 | |
| | | £2,683 |
| Surplus..... | | £181 |

In olden days immense quantities of waste timber and refuse were burnt in specially built furnaces, whereas now the smallest laths are used, and the remaining refuse is converted into charcoal, a by-product which now brings into the mills from £4,000,000 to £6,000,000 per annum. The first planing mill for export purposes was built about 1858, and the first joinery mill about the same time.

The wood pulp industry is of recent origin, but is, nevertheless, a very important business. The first mill for mechanical pulp was erected in 1857, and the first mill to produce chemical pulp in 1872. The annual export of mechanical pulp now amounts to about 80,000 tons, valued at 5,000,000 kroner, and of chemical pulp more than 100,000 tons, of the value of more than 15,000,000 kroner.

## OTTAWA RIVER HOUSE BOAT.

MESSRS. Bannerman & Findlater, of Ottawa, Ont., have recently completed four lumbermen's "house boats" for the Upper Ottawa Improvement Company. These are claimed to be the first iron house boats in Canada, two being for use at Quio (Chats Lake) and two on the Ottawa river at Pembroke. These boats—a drawing of which is given herewith—are scow-shaped, each 51½ feet long over all, with a keel of about 42 feet ; 12 feet wide at the top, and 11 feet across the bottom and 3 feet deep. The bow tapers to an extent of about 6 feet, and the stern 4 feet. The keel is formed of a piece of timber 7 inches deep and 6 inches wide, and is protected by an iron shoe. The house stands 6 feet above the top of the hull, making a height of ceiling of about 9 feet. The kitchen and cabin occupies about one-third of the house, the rest being occupied by sleeping berths, of which there are two



OTTAWA RIVER HOUSE BOAT.

tiers, a tier on each side of the boat with a gangway through the middle, making accommodation for a crew of twenty-four. The house is clapboarded with an iron roof.

The Japanese market bids fair to be a large consumer of American and European lumber in the near future. The development that is going on in the land of the Geisha is bound to have the effect of increasing the consumption of American lumber. Brick buildings are not common in Japan owing to the frequent earthquakes, and the native lumber is irregular in size and difficult to handle. A few steam saw mills have been erected, and there is reported to be an opening for high class machinery for those who will introduce and handle it, to be used in the sawing of native woods. A great deal of lumber has been shipped from Japan to the Pacific coast, and it is likely that in the future Japan will be a larger user of west coast lumber. Japan is a populous country of close upon 55,000,000 inhabitants, all rapidly becoming civilized and copying Americans and Europeans in their manner of living. The buildings are becoming more modern, and their industries are being rapidly developed.

## THE COMPARATIVE ADVANTAGES OF STEAM AND WATER POWER.

By "ECONOMY."

Now that the attention of the public is being closely directed to the possible utilization of the many valuable water powers which we have in Canada, it may be of interest and advantage to consider their value in comparison with the best known alternative method of generating energy, viz., by steam. The practical side of the question may almost be neglected, because modern science has so improved hydraulic machinery that the best classes of water wheels may be placed about on a par with steam engines as regards regularity of service and general satisfactoriness. The main interest will center in the commercial features of the comparison—and might take the form of the question, "Under what circumstances is water power a more economical prime mover than a steam engine?" which leads to the next question, "Can there be conditions which will cause steam power to be more economical than water power?" Both steam and water power, in what may be called their "raw" state, must be rendered available for use by more or less expensive processes, including in many cases the transmission of the energy from the point of production to the point of utilization; and it will be evident that there may be many conditions, physical and commercial, which may have considerable effect in modifying the value of one form of energy in comparison with the other.

Our rivers and streams are most of them short, and the country through which they run being denuded rapidly of forests. Hence they are very sensitive to the precipitation and respond very rapidly to it, being swollen shortly after rains, and carrying off large volumes of water in a short space of time. Similarly, after a period of dry weather they shrink to sometimes a very small proportion of their maximum flow. Even those streams which rise in marshy localities which absorb and retain moisture better, largely depend on the character of the fall weather. Should there be a considerable snowfall before the severe cold sets in to freeze the ground, then the stream will keep a more steady, even flow during the winter than it will if the hard frost sets in before the snow. And if the somewhat exceptional condition be met with of a dry summer, with little precipitation, followed by an early and severe frost without snow until late in the fall, then it is probable that many streams would dry up almost completely for several weeks, if not months. Water, therefore, as a source of power, can not be considered always satisfactory in point of reliability, unless some means can be taken for averaging up the flow; storing up the excess in times of flood, and letting it go in times of low water. This expedient is well recognized and frequently adopted; but the expense of the storage reservoirs is likely to be so great that only peculiar commercial conditions would justify it. The cost of development of a water power also is an item that may become very serious. It is but seldom that the favorable condition is found of plenty water and a large direct fall. As a rule the large streams, particularly in Ontario, have a somewhat slow current, and a high head could be obtained only by carrying the water in a long canal, which would cost heavily.

It is therefore evident that, taking everything into consideration, the first cost of a water power plant to render available a certain definite, continuous horse power, depends on the cost of machinery, dams, and perhaps storage reservoirs. If the power required does not exceed the minimum flow, then the reservoirs are not required; but they will be if the average flow is necessary. Hence it is quite possible that the total first cost of a water power enterprise, including the wheels, may be even largely in excess of the total first cost of a steam plant of the same horse power capacity. In fact, unless the circumstances be altogether exceptional, it is not likely that water first cost will compare at all favorably with steam first cost. After the first cost of the two systems comes in a very important consideration—purely commercial in its character. Manufacturing establishments using power require transporting facilities for their raw material, and for their finished product; and just in proportion as these are bulky or heavy, so does the cost of their transport become a more potent factor in deciding whether cheap power or low freight is of greater importance. More especially is this so in establishments that do a principally foreign trade, and hence require convenient access to a sea or lake port. It is a somewhat unfortunate circumstance, but in the nature of things, that the largest commercial and transporting centers are far from any considerable and swift streams. We all know of the observant traveller who remarked on the peculiar coincidence that there was always a navigable stream close to a large manufacturing city, and therein lies the answer to the question why cities are not near water powers; because navigable waters are very generally of greater importance than very inexpensive power. Hence the value of a water power largely depends on its position with regard to railways, canals, or navigable streams. Here, however, comes the very important fact that we have several distinct means of transmitting power over considerable distances; so that although the best place for generating hydraulic power may be distant from the most convenient shipping point, the intervening space may be bridged.

Power laid down in form convenient for use at any particular spot costs money to develop, and more money to operate; and whether steam or water power is the better for any particular case can only be arrived at after careful estimate of their respective total costs per year. These total costs may be divided into fixed and variable expenses. Among the former are interest on money invested, maintenance and depreciation, insurance, wages, and the like; among the latter are fuel, oil, and the like. Every enterprise is expected to pay a fair rate of interest on the investment; most have some bonded indebtedness which is a first charge on income, and therefore interest on investment is a fair charge in making the comparison. No machinery, building, construction, or apparatus of any kind can be expected to last forever, so that estimating its life at whatever length may be proper in the light of experience, it is only sound business to lay by every year out of the gross income a sum equal to the yearly deterioration in value, so that at the end of the plant's useful life it may be found to have paid back the money invested in it. This yearly sum may be expressed in terms of a percentage of the total cost, the actual percentage varying with the class of construction or apparatus. A sum must always be allowed for maintenance, repairs, &c., and for insurance, and the wage account is always a very considerable proportion of the expenses of operation. All the above items can be calculated very closely, and placed at a pretty accurate yearly sum. Variable expenses can also be estimated sufficiently close for purposes of estimate. This is an expense which is saved in water power enterprises for the most part, and as fuel is generally one of the larger expenses, the great advantage of water comes in here. To compare the above item by item: Whether steam or water power be used, the interest percentage will be the same, so that the respective charges on this account depend entirely and solely on the respective costs of the two methods. If the whole hydraulic construction be more expensive than the equivalent steam plant, then the hydraulic interest charge will be greater than steam interest charge, and similarly. This requires a mere comparison of estimates of investment. In the depreciation account this equality is not preserved. The hydraulic plant will probably be far more durable than the equivalent steam plant. The dams will last all the longer as they are more solidly built, and a small sum spent yearly in inspection and repairs will cause them to last indefinitely. Besides which a "second hand" dam and water privilege is just as valuable as one brand new, if it has been properly maintained, which cannot be said for a second hand steam plant. Probably a fair depreciation on the whole dam, gates, tail race, &c., can be placed at 2%. Of the hydraulic plant, wheels, regulators, shafting, &c., a reasonable life of 25 years may be expected, with the consequent depreciation percentage of 4%; building 2%, if of solid brick or masonry construction. The insurance charge will be considerably less in a hydraulic than in a steam plant, and will be smaller as the building is less fireproof. It must also be remembered that the first cost of the hydraulic building will very probably be quite appreciably less than that of the steam building.

The same items in a steam plant may be reasonably taken at: For boilers, a life of 10 to 15 years, depreciation percentage, 10%; engines, shafting, journals, piping, 20 years, percentage 5%; insurance probably 25 cents per $100 higher than with water. As to the wages charge, it is probable that a hydraulic plant can be operated just as efficiently as a steam plant, with fewer men, and consequently smaller wages expense. The larger the plants the better for the hydraulic, for while one man cannot properly attend to more than so many boilers and keep good steam, owing to the work increasing as the battery is large, the additional size or number of water wheels imposes no greater work on the operators. It may be fairly pointed out that there are labor-saving devices, such as automatic stokers, which increase the work efficiency of the firemen very greatly, enabling one man to keep good steam on a number of boilers, but at the same time it is wise to remember that all such devices increase the complexity of a steam plant, raise the probability of accident, and render advisable the employment of higher class engineers at greater expense. In plants of a certain capacity it is necessary to employ both engineer and fireman, one man not being sufficient. In a water power one man would be quite capable of looking after the entire plant, hence the other man's wages are saved; and one superior mechanic can do the work of two and save considerable. The great importance of this item will be evident when it is considered that the saving of $1 per day or $300 per year (about the usual wages of a fireman) will pay the interest at 5% on $6,000. This means that a water power plant may cost $6,000 more than a steam plant of equal size, and be an equally good investment, if thereby one fireman's wages can be saved.

The most important item among the variable expenses is undoubtedly the fuel, which will vary very greatly according to locality, kind of business, state of markets, etc. In coal mining localities refuse can be obtained for almost nothing—for the expense perhaps of carting it from the pile; in others good steam coal costs as high as $6, $7 or $8 per ton. Wood varies according to locality from 75 cents to $2.50 a cord. Oil or gas fuel can be obtained in certain favored localities. It is of course obvious that as fuel—whether coal, wood, oil or gas—is less expensive, so does the value of a water power become less in comparison with that of steam. Another very important commercial consideration—coal fields are always well supplied with railroad facilities, sometimes even with canals—so that the two most important manufacturing advantages are found together: easy transport and cheap power. Nature herself seems to place obstacles in the way of hydraulic power, for just as a large stream has a greater fall along its course, so does it become more difficult for railways to follow it, owing to the grades. Hence it is generally necessary to transmit hydraulic power for some considerable distance to a convenient shipping point, and this means larger fixed charges to offset the entire elimination of the fuel charge. It is obvious that assuming a sufficiently low cost of fuel at the shipping point, and an expensive water power plant, there may easily be conditions which will make a water power of no value whatever in comparison with steam. For instance, in a recent case, to develop and render available a certain water power for use 12 hours a day for 365 days a year, required the damming of some storage lakes, and the transmission electrically of about 150 h. p., in all about $20,000. The expenses in connection with this enterprise, for interest, depreciation, wages, etc., were estimated at $2,700 per year. The cost of a steam plant to do the same service was estimated at $8,000. Now, taking the above percentages and allowing two men for the steam at $800 wages, the same expenses without fuel would come to about $1,500. Thus $1,200 are allowable for fuel in order that steam and water (electrically transmitted) may be equally good investments. This allows $8 per horse power year for fuel. Or allowing 4 lbs. of coal per h. p. h. (condensing) comes to the equivalent of 1080 tons of coal per year. Coal, or equivalent, at $1.11 per ton would make either plant an equally good investment; at $1.12 would be more expensive than water power; at $1.10 would be more economical than water.

Now, if this water power had been situated about 100 miles from where it was, and placed as near a Nova Scotian coal mine as it was to its distributing point, then culm could have been obtained at 25 cents per ton, and allowing even 4 tons of culm to give as good effects as one ton of good steam coal, even then the steam plant would have been the better investment. At the distance of 32 miles from the above coal mine, culm cost $1 laid down, so that the fuel for the above plant would have greatly exceeded the $1,200 allowed. Here we have a very clear illustration of the way in which the comparative values of steam and water power vary. At one end of a 32 mile line the water power was worth nothing at all; at the other end it would have been a good investment for $25,000.

The kind of business to be done will also largely affect the comparison. There are many products that require heat in the various processes, for bleaching, cleaning, bending, drying, and what not. In the present state of

our knowledge of electrical matters, it is not wise to predict what may or may not be done in the next few years in the way of electrical heating, but we do know that water power will not develop heat without its transformation into electrical energy; so that unless this transformation is made, a water power plant will have to be supplemented by a steam heating plant in all cases where heat is required. If not a steam heating, then hot air, stoves, &c., which all mean fuel.

Now, if steam is to be used at all, it might just as well be used as economically as possible, and to raise steam to a high pressure costs less proportionally than it does to generate a low pressure. If, therefore, high pressure steam be used in steam engines, and their exhaust be availed of for drying or heating purposes, it might very well be that the expense incurred would compare very favorably with the total interest and other expenses of a combined water power and steam heating plant. And the comparison would be all the more favorable to steam as steam became necessary in larger quantities for drying and less comparatively for power. There are other industries again which necessarily produce combustible refuse, which they must consume in some way, such as tanneries, planing and saw mills, and other wood-working industries. Unless they have some local demand for such refuse it becomes very necessary to burn it up to get it out of the way. In all such cases it is questionable whether water power would have any value at all.

In appraising the comparative values, therefore, of a water privilege in relation to steam working, it becomes necessary to regard the whole question from a strictly commercial standpoint. The total first cost by the two methods must be reliably estimated, with their probable maintenance and operating costs. Due consideration must be given to the cost of extra haulage and handling, where the water power is not on the transport line, and be debited against it. The heating problem is a factor, and the cost of fuel, and if the careful discussion of the matter leads to the result that steam is the more economical, then no arguments based on the "sin of wasting power at our doors" should be allowed to influence it. It is obvious that no particular rules can be laid down by the application of which the value of water power can be determined from tables like a logarithm. Every case must be determined on its merits, and the above illustration showing how the merits may vary widely in 32 miles, serves to emphasize the importance of careful investigation and logical calculation.

## AUTOMATIC BOX MACHINE.

A MARVELOUS piece of automatic machinery for the purpose of making boxes has been invented by W. T. McRae, of Philadelphia, Pa., and recently set up for a practical test, after working five years on its perfection, says the Philadelphia Record. It is known as the "Eureka," is novel in its design, and does its work in an entirely new way as compared to the old machines designed for this work. It is fed from four sides with boards which have been previously cut the desired size; and a box is turned out at every revolution of the machine, the wooden cubes being thrown off at an astonishing rate. A single operator, who need not be a skilled person by any means, can work off 1,000 boxes an hour, the work of the attendant being only to feed the press with the wood. The machine may be readily adjusted in a few minutes to make a box of any size within reasonable limits. One press, for instance, is made to take in all the various sizes of cigar boxes; while for larger ones another size machine is made. After the machine is started its action is automatic, and at each revolution a box is shot out, one following the other so rapidly that the question of carrying them off becomes an embarrasing one. The box as turned out is complete, with the exception of the lid. Lock-corner boxes are as readily handled as the straight-edged one, the hammers used in nailing them being taken off and plates substituted which squeeze the parts together instead of nailing them. The capacity of this machine is said to be nearly ten times that of the box-making machines now in use.

The Review of Reviews makes a striking assemblage of cartoons illustrating the war question. The reproduction of Spanish, Cuban and Mexican cartoons are especially interesting. The pages of the May Review devoted to this department will have a unique historical significance in years to come.

## THE SPRUCE GALL-LOUSE.

Prepared for the Bureau of Forestry by WM. BRODIE, TORONTO.

IN the spring of 1897 many spruce trees in and around Toronto were found to be more or less injured by a pseudo-gall insect. The galls were enlarged and deformed buds of the previous year, usually towards the tips of the twigs. Investigation showed that these galls were formed by a small insect, popularly called the spruce gall-louse, the Chermes abietes of entomologists. A short account of this destructive pest, as then known in Ontario, appeared in the annual report of the Clerk of Forestry for the Province of Ontario for 1897. Since then it has spread with astonishing rapidity and has been detected at many points, from Peterborough to the County of Bruce, where it was lately detected by Dr. Hunter on native spruce trees in a swamp in the township of Culross. It has also been found on native spruces in Muskoka, near Utterson station. So far it would appear that unless this insect is checked by some artificial means it will soon destroy our ornamental spruce trees and hedges and, extending northwards, do immense injury to our spruce forests.

FIG. 1.

FIG. 2.

FIG. 3.

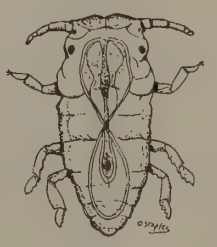


FIG. 4.

The trees already attacked by this spruce gall-louse in Ontario are the European spruce, Picea excelsa, the double spruce or black spruce, Picea nigra, the white spruce, Picea alba, and the balsam fir, Abies balsamea, and it may also be found on the hemlock, Tsuga Canadensis. This insect is native to Northern Europe and was introduced into the United States on imported spruce trees and thence into Ontario, or it may have been introduced here direct from Europe, as for many years there has been an annual importation of young European spruce trees into Ontario.

At Toronto the full grown insects—the producers—emerge from the galls, the scales of which open to give them exit, about August 1st. On emerging they are slightly imperfect, but in one day ample wings are developed which enable them to fly long distances. After distribution the female settles on a spruce leaf and lays—under herself—about thirty-five eggs and then dies, resting on the eggs. In about a week the young six-footed larvæ are hatched. They crawl about and find immature buds into which they burrow and of course remain quiescent during the winter. But in the following spring their presence in the bud causes it to develop into a "gall" instead of a normal twig. The lice in the galls give birth to other living lice so that about thirty individuals are found under each scale of the gall. The galls are usually irregularly spherical and often more than a half inch in diameter. When growing they are of a yellowish green color, but during the winter they assume a reddish brown tint, which they retain until the end of May, when they usually fall from the tree. This is the usual form of this gall, but there is another form, not a gall, in which the injury is done in the leaf axils. As these insects in the feeding stage are within the gall, and the gall is perfectly water tight, so that no fluid can penetrate, poisoning is out of the question, and as in the migrating larval stage, they do not eat, poison is equally useless. Of course in this larval stage soap emulsions might be of some use, if applied abundantly at the proper time. But without any doubt the cheapest and best plan as yet tried in Ontario is to clip off the galls as soon as they are noticed—say in June—and always before the first of August, while the producers are in the galls, and immediately burn them up. When a tree is too much infested to be dealt with in this way it should be cut down and burnt at once. Of course there is no use in doing this after the producers are out of the galls. Several cases are known where this plan was carried out with very satisfactory results, and it is respectfully recommended that all those having spruce trees in charge should carefully see to the clearing of the trees and the extermination of this formidable insect pest. As some of our nurseries are affected, buyers of evergreen nursery stock should be very careful to see that the young trees are perfectly free from this insect pest.

### DESCRIPTION OF PLATES.

Fig. 1. Gall infested twig as usually seen in the fall season before the death of the part of the twig above the gall.

Fig. 2. Infested twig of European spruce, two-thirds natural size, collected April 16, 1898, from a badly infested tree growing in one of the Toronto public parks, showing the parts of the twigs above the gall dead, the leaves having fallen off, the usual condition found in the spring season.

Fig. 3. Mature, winged fertile form, from a microscope mount, enlarged 25 dia., collected September 1, 1897. In this final stage of development they do not eat, but their ample wings enable them to fly long distances before ovipositin, and hence the alarmingly rapid distribution.

Fig. 4. Immature gall producer, from a microscope mount, enlarged 25 dia., immediately after issuing from under the scales of the gall, August 18, 1897.

## OUR EXPORT TRADE.

THE visit to Canada of representatives of several European importing houses, for the purpose of forming a closer connection with our lumber manufacturers, is a circumstance of no little importance to the trade. It signifies a preference on the part of foreign importers, more especially those of Great Britain, to trade with this country. This, in view of the conservatism of the English people, augurs well for the prospects of future business. While our exports of lumber to the British Isles have greatly increased of late years, we do not think that the limit has yet been reached. There is reason to believe, however, that before any appreciable expansion of business is witnessed, the export trade will undergo some notable changes.

Heretofore, as our readers know, practically all the lumber exported to Great Britain has been handled by a dozen or more large shippers, who make the bulk of their shipments from Montreal, Quebec, St. John and Halifax. Their trade has largely been confined to deals and square timber, and having cultivated a market for these, they naturally discourage any attempt to digress from the beaten path.

It is only fair to say that manufacturers have found this method of selling to shippers entirely satisfactory. But there is another aspect of the case, viz., that the development of our lumber industry on the lines which would prove most profitable to the country has thereby been retarded. Our manufacturers have learned but little of the requirements of the British market, and consequently a considerable trade in specialties and partially manufactured goods has been lost. It is with a view to securing a portion of this trade that we welcome the present sentiment in favor of closer relations between the Canadian manufacturer and the importer in the foreign market. That this sentiment is recognized on this side of the water is shown by the number of manufacturers who have visited Great Britain during the past year.

The question of the best method of handling the export trade is one which has been given much careful study by the leading manufacturers in nearly every line of industry; it is one difficult of solution. In the marketing of timber products there would seem to be more obstacles than are met with in other lines, yet it is a problem which must be dealt with in a business like manner at an early date. A movement is now on foot in the Southern States to form an association to export pitch pine, particulars of which may be of interest. It is proposed to form a joint stock company, with a capital of $170,000, divided into $1,700 shares, said shares being proportioned to the fifty mills included in the company according to export capacity. The company will submit every requirement to each and every mill for quotation, the lowest bidder to have the order if a sale is effected, less 2½ per cent., in consideration of which the company guarantees to pay for all purchases without other discount or commission. In making the sale the company will add at least one dollar per thousand feet to the prices quoted by the mill man. A daily bulletin of transactions, giving sales, price, shipments, etc., will be issued to each member of the company.

One objection to the above plan would seem to be that it fosters competition between the manufacturers, the removal of which would destroy entirely the working of the association. The commendable features are that it would afford an actual knowledge of the world's demand, reduce the cost of securing the business, and provide for prompt payment of stock.

## UNIFORM GRADING OF LUMBER.

THE movement for uniform grading of lumber has obtained a strong foothold in the United States, and is rapidly spreading from section to section. Encouraged by the success of the Wisconsin Valley Lumberman's Association, the pioneer in the work, the southern lumber manufacturers have taken steps to inaugurate a similar system, by which to secure uniformity in grading and inspection of lumber. Nor is the movement confined to the pine trade. At the annual meeting of the Chicago Hardwood Lumber Exchange held recently, letters were read from the Cairo Hardwood Lumber Exchange and the Northwestern Hardwood Lumbermen's Association, asking that measures be taken to establish uniform rules of hardwood inspection.

Nowhere does there exist greater necessity for proper inspection rules than in Ontario, and we hope the Lumbermen's Association will prove its usefulness by taking up the work. The establishing of standard grades would undoubtedly have a beneficial effect upon prices, and would do a great deal to strengthen our position in foreign markets.

The lumber business of this province has in the past been conducted single-handed. Every manufacturer, whether pine or hardwood, has made his own inspection, and as a result there is a wide divergence as to what constitutes a certain grade. One manufacturer sets the standard higher than another, who, as a consequence, finds difficulty in disposing of his lumber. Neither can a dealer order a certain grade and know exactly what he is going to get, as should be the case.

The Wisconsin Valley Lumbermans' Association, referred to above, represents a total lumber production of 400,000,000 feet a year. An inspector is employed to visit the different plants at stated intervals and report to the management all items not in line with the rules, as well as to instruct the individual graders in their duties. The expense of maintaining this system is raised by a tax of one cent on every thousand feet actually shipped, which has so far been found sufficient.

## THE UTILIZATION OF WASTE TIMBER PRODUCTS.

LUMBERMEN should be interested in the project which is being promoted by the Rathbun Company for the establishment of charcoal iron smelting works at Deseronto. This step is being taken in pursuance of a policy decided upon by the company, as far back as 1866, to seek to find methods of manufacture that would convert the rough logs and the coarse cuttings of the mills into products that the public would buy at a profit. In furtherance of this idea, the manufacture of porous terra cotta fire-poof building material from sawdust was commenced; cedar mills were established at Deseronto, Campbellford, Lindsay and Gravenhurst, so that such coarse forest material as could not be safely floated or railed to Deseronto might be manufactured in transit; a cement manufactory was started which utilizes for fuel 3,500 cords of coarse material from forest and mills per year; chemical or wood distilling works were erected, where gas from sawdust was made for lighting the factories and town, following which came extensive charcoal works. These various industries consume a vast quantity of the by-products of the forest and mills, give employment to 1,500 men, and their products find a market in Canada, the United States and Great Britain.

By this policy the Rathbun Company have been enabled to greatly prolong their forest operations by cutting their timber carefully within prescribed bounds, at the same time, by removal of waste timber, affording protection against fire and permitting the rapid growth of young pines for future supply.

Owing to the duty imposed by the United States on Canadian charcoal, and the reduction in price of wood spirits by the Dominion government, it has been found necessary for the preservation of the charcoal industry to establish a charcoal iron blast furnace in the Bay of Quinte district, and arrangements to this end are well advanced. It is expected that a market can be found for the charcoal iron in Great Britain, Norway and Sweden.

This blast furnace, which will have a capacity of 35 tons per day, will require yearly 20,000 cords of charcoal timber, representing 20 cords of coarse timber per acre, from 1,000 acres per year. Employment will be given to about 225 men for an average of about five months during the cold weather in getting out this timber.

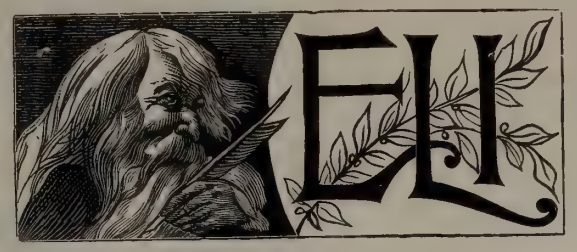
In view of the steady decrease in the available supply of first-class timber, and the increasing quantity of coarse material, there is no question of greater importance before lumbermen to-day than that of finding means of utilizing the present waste material from the forest and the mill and the promotion of new forest growth. Hence, as we have said, the projected enterprise at Deseronto, which appears to combine these objects, is one in which lumbermen should feel a deep interest, as in the event of success attending the venture and a sufficient market being found for Canadian charcoal iron, similar works might be established in different parts of the Dominion, with

great advantage to the general welfare of the country and the lumber industry in particular.

## EDITORIAL NOTES.

The methods adopted by some municipalities in awarding contracts for lumber and other supplies are, to say the least, very unbusinesslike. The authorities appear to ignore entirely the rights of tenderers. A striking example of injustice is found in the action of the Winnipeg City Council in awarding the contract for the annual supply of lumber. Tenders were invited publicly for the supply of from 500,000 to 1,500,000 feet, that submitted by Messrs. Dick, Banning & Co. being accepted. On being notified of the acceptance of their tender, they made arrangements with the manufacturers for the supply required, and also for teams, etc., for delivering the lumber to the city, adjusting their financial affairs accordingly. Afterwards they were notified by the City Clerk that the action of the Council had been vetoed by the Mayor, on the ground that sufficient time was not allowed between the first appearance of the advertisement calling for tenders and the date limit. At a subsequent meeting of the Council new tenders were ordered to be asked for. The injustice done to Messrs. Dick, Banning & Co. was in no way recognized, notwithstanding that they had arranged for their lumber supply and that their prices had been made public for the benefit of competitors who would submit new tenders. If a mistake was made, the onus thereof should rest upon those in error, not upon an irresponsible party. The city should either have carried out its obligation with the firm, or effected a settlement before inviting new tenders.

In the figures to be found on another page, showing the lumber consumption of the Northwest and the relative quantities supplied by Canadian and United States manufacturers, there is food for reflection. In the year 1896 there were consumed in Manitoba and the district extending as far west as Regina, approximately, 80,000,000 feet, of which 12,000,000 feet was the product of United States mills. Last year the consumption in the same territory increased to 92,000,000 feet, but of this nearly 17,000,000 feet was imported from the United States. Thus, of the increased consumption of some 12,000,000 feet during 1897, the Canadian mill men only benefitted to the extent of 7,000,000 feet, which clearly shows how serious has become the competition from our southern neighbors, who are protected in their own market and allowed free access to Canada. Four years ago the imports of lumber into the Northwest were of little account, being less than 2,000,000 feet, but, under the very favorable conditions, they have rapidly grown. While, from its geographical location perhaps more than anything else, our Northwest is not destined to be a manufacturing country, yet its lumber trade is gradually expanding, chiefly as a result of the improved condition of the farming community and the consequent increase in the volume of building operations. It is indeed encouraging to observe that one, at least, of our Georgian Bay manufacturers is endeavoring to penetrate into this market, notwithstanding obstacles in the way of high freight rates and such like. His success will no doubt be watched with interest.



A gentleman prominently connected with the erection of several large buildings in Toronto, in relating to me some of his experiences, referred to an incident which seems to point a moral. It was his duty to inspect all lumber. The specifications for flooring for a certain building called for first class material, and it was expected to pay a good price for the same. Arrangements were made with a local dealer to supply a portion of the required stock at a fixed price, but when the first carload arrived it was found so inferior as to be rejected entirely and the order cancelled. "The reason of this," said my informant, "was that the price which the mill man was being paid for the lumber was so low that he could not afford to supply the grade, and this notwithstanding that a fair price was being paid to the dealer, who could very well have paid a better price to the mill man. His desire to make a large profit cost him the contract." It is well to be content with a fair margin of profit.

* * *

The fertile brain of Herr Cu. Bloch, of Berlin, Germany, has invented an apparatus for the manufacture of sawdust into cakes. These cakes, he seriously declares, may be used for food for cattle, horses, etc. Some experiments were made in Berlin in 1895 by the Tramway Company, which are claimed to have proved successful, though the manufacturing expenses were rather higher than expected. The new substance consists of a mixture of two parts of fine sawdust and one part of bran and muriatic acid. After fermentation the mixture is baked and takes the shape of a brick. It is then damped by means of water, when it makes an excellent substitute for hay and straw, and is also a good fodder for cattle and horses. Oak or walnut woods do not, on account of their tanning properties, give such good results as soft woods. The news of this invention has just been received in time to relieve the Ottawa valley lumbermen of worry over the disposal of their sawdust.

* * *

A remark made by Mr. Edward Still, manager of the European Exporters' Association of Toronto, shows the necessity of the formation by lumbermen of some organization to conduct the export trade. "When I was in Glasgow last," said Mr. Still, "a gentleman who is in the business said to me that he was at a loss to understand the system under which Canada and the United States shipped lumber to the British market; there did not seem to be any understanding as to the requirements, and at times there was a complete glut." Conditions such as these are likely to exist so long as there is no organization among lumbermen, and secrecy is the motto of the trade. Mr. Still informed me that he was about to leave on a business trip to Europe. He thought his association might be of considerable assistance in the formation of a lumber exporters' association, if any action was to be taken. At my suggestion Mr. Still outlined the modus operandi of the European Exporters' Association, of which Sir W. P. Howland, K.C.M.G., is president. The association have experienced and high class representatives in the leading centres in Great Britain, Germany, France and other foreign countries. They do not act as middlemen in the manner of handling the goods, but place exporters in touch with reliable agents, who in turn effect the sale. The agency of the European Exporters' Association is one which seems to me worthy of the consideration of parties interested in opening up trading relations with Europe.

* * *

A correspondent of the Toronto Globe, writing of the lumber industry of British Columbia says: "The lumber trade is inclined to favor a retaliatory policy toward the United States. As in Ontario, it is claimed that the export of logs and the import of lumber, shingles, etc., under the existing American tariff will be more profitable than the domestic manufacture. This is still a lumbering country. Mill refuse is burned, and soft wood in every form is lying along the shores and wasted as freely as in older Ontario 30 years ago. Square timber is turned out of the mills so long that it requires three flat cars together to carry its length, and such timber is often two feet square and more. An ordinary order for lumber is filled with boards twelve inches wide, and almost any required dimension in timber can be supplied. There are wooden eave troughs on the houses, and especially on Vancouver Island many of the finest and most ornate residences are built of wood. This forest wealth which seems to be thrown about everywhere in prodigal carelessness, the great timbers, the immense piles of long and wide boards, the heavy planking on wharves and docks, all without knot or flaw, always attract the attention of visitors from older Canada. The exhaustion of this supply is not yet within measurable distance, and it is treated as if such a result was an impossibility. The influences which make for a tariff protection, retaliatory and otherwise, on lumber are comparatively weak. With the freedom of the American market there would be an opening for British Columbia products in Skagway and Wrangel, and there would be an opening also in the western states. But so far as the market south of the boundary is concerned it is questionable if Canadian lumber could make much headway. The Pacific slope is as well timbered in American as in Canadian territory. The "slaughter market" argument, too, is heard in advocating a tariff on American lumber. The real market of the British Columbia product, however, is in Australia, Hawaii, the west coast and Europe, and there the great sailing vessels are continually carrying it. The home market is of comparatively little importance."

So-called wood tapestries are made by gluing sheets of veneer to a woven cloth back, then cutting the veneer as desired. The glue used to unite the cloth and wood is of a character to remain pliable after drying. The cutting of the veneer must be very nicely done, so as not to injure the fabric backing. The invention is of French origin.

## NATIONAL HARDWOOD INSPECTION RULES.

THE Chicage Hardwood Lumber Exchange called a meeting of hardwood lumber dealers for the 8th of April last, the chief object being to adopt a system of uniform grading. The meeting resulted in the formation of the National Hardwood Lumber Association, comprising the markets of Cincinnati, Memphis, St. Louis, Chicago, Racine, Milwaukee and Minneapolis, and it is expected that other markets will also become identified with the organization. Uniform inspection rules for the grading of hardwood lumber were adopted, and in view of the importance of the subject, we give some of the rules below :

STANDARD GRADES.—The standard grades of hardwood lumber are firsts, seconds, commons and culls, except as otherwise specified. When firsts and seconds are combined as one grade, there shall be at least 33⅓ per cent. of firsts. Lumber below the grade of culls shall be classed as mill culls.

STANDARD LENGTHS.—The standard lengths are 6, 8, 10, 12, 14, 16, 18 and 20 feet, except as otherwise specified. Most lumber is handled in lengths of 10, 12, 14 and 16 feet. Odd lengths, such as 9, 11 and 13 feet, shall be measured back to the next even length, except when otherwise specified. In the grade of firsts and seconds the lengths are from 10 to 16 feet, but there must not be over 10 per cent. of 10 foot lengths, unless otherwise stated.

STANDARD THICKNESS.—The standard thicknesses of lumber are ⅜, ½, ⅝, ¾, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.

STANDARD DEFECTS.—One knot 1¼ inches in diameter. Two sound knots not exceeding in extent or damage 1¼ in. knot. One inch of bright sap, except when otherwise specified. One straight split, not exceeding in length, in inches, the surface measure of the piece in feet, except as otherwise specified. Worm or grub holes not exceeding in extent or damage one 1¼ inch knot, except as otherwise specified. Ordinary season checks are not considered defects. Black stains, heart shakes, rots, dote and unsound knots over 1¼ inches in diameter are considered serious defects, reducing to a grade lower than firsts and seconds.

In the following rules all widths and lengths mentioned shall be inclusive.

SPECIAL INSPECTION.—Log run means the full run of log with mill culls out. Common and better means the full run of the log with culls and mill culls out. Merchantable means the full run of the log with mill culls out, and that the common and better shall be measured full and culls one-half.

INSPECTION OF LUMBER SAWED FOR SPECIFIC PURPOSES.—Lumber sawed for specific purposes, such as axles, bolsters, tongues, reaches, etc., must be inspected with a view to the adaptability of the piece for its intended use, because in most cases it cannot be used for other purposes. Such stock shall be inspected clear and culls.

### MAPLE.

Grades, Firsts, Seconds, Common and Culls.
Widths, 3 inches and up.
Lengths, 6 to 16 feet.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts shall be 8 inches and up wide, 12, 14 and 16 feet long, and free from all defects, except in pieces 10 inches and over wide, which may have one sound standard defect.

Seconds shall be 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are 3 inches and over wide, 8 to 16 feet long; 3 and 4 inch pieces must have one face clear and two square edges; 5 inch pieces one face clear. Pieces 6 inches and over wide must work three-fourths clear in not over two pieces.

Culls are three inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half clear without waste, in not to exceed three pieces. Pieces 3, 4 and 5 inches wide must be sound.

Maple strips are 3, 4, 5 and 6 inches wide, 6 to 16 feet long.

Grades : Clear, Commons and Culls.

Clear strips are 10 to 16 feet long and must show one face clear and two good edges.

Commons are 8 to 16 feet long, not to exceed 20 per cent. shorter than 12 feet, and will admit of one standard defect showing on both faces.

Culls are 6 feet and over long and shall work one half clear in not more than three cuttings. No cutting to be less than 2 feet in length.

### ROCK ELM.

Grades : Firsts, Seconds, Commons and Culls.
Lengths, 6 to 16 feet.
Widths, 4 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts and seconds are 4 inches and up wide, 8 to 16 feet long, not to exceed 20 per cent. shorter than 12 feet; 4 and 5 inch pieces must be clear. Pieces 6 inches and up wide must be sound and work 80 per cent. clear in not more than two pieces. The grade of firsts and seconds must have 25 per cent. of clear lumber, 6 inches and up wide and 10 feet and up long. Straight splits the width of the piece will be admitted into the grade of clear.

Commons must be 4 inches and up wide, 6 to 16 feet, not to exceed 20 per cent. shorter than 12 feet, and must work two-thirds clear in not more than three pieces.

Culls must not exceed 40 per cent. less than 12 feet, and work 50 per cent. clear in not more than four pieces.

### SOFT ELM.

Grades : Firsts, Seconds, Commons and Culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long and free from all defects, except in pieces 10 inches and over wide, which may contain one sound standard defect.

Seconds are 6 inches and over wide 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are 4 inches and over wide, 8 to 16 feet long. Four inch pieces must have one face clear and two square edges. Pieces 5 inches wide must have one clear face. Pieces 6 inches and over wide must work three-fourths clear in not over three pieces.

Culls are 3 inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half without waste of sound cuttings in not more than three pieces.

NOTE.—Black spots or streaks are serious defects, and inspectors shall be careful in estimating their damage. If they are excessive they will reduce the piece one or more grades.

### BEECH.

Grades : Firsts, Seconds, Commons and Culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long, and free from all defects, except in pieces 10 inches and over wide, which may have one sound standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are 3 inches and over wide, 8 to 16 feet long, 3 and 4 inch pieces must have one face clear and two square edges, 5 inch pieces one face clear. Pieces 6 inches and over wide must be of sound character and work three-fourths clear in not more than two pieces.

Culls are three inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half clear, not to exceed three clear cuttings. No piece to be less than 3 inches wide nor less than 2 feet long. Pieces 3, 4 and 5 wide must be sound.

### BIRCH.

Grades : Firsts, Seconds, Commons and Culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long, and free from all defect, except in pieces 10 inches and over wide, which may have one sound standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are 3 inches and over wide, 8 to 16 feet long, 3 and 4 inch pieces must have one face clear and two square edges, 5 inch pieces one face clear. Pieces 6 inches and over wide must be of sound character and work three-fourths clear in not more than two pieces.

Culls are 3 inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half clear, not to exceed three clear cuttings, no piece to be less than 3 inches wide nor less than two feet long. Pieces 3, 4 and 5 inches wide must be sound.

Red birch shall be not less than 75 per cent. red on one side. Four and 5 inch strips shall have one face all red. Otherwise the grade shall be governed by the rules of ordinary birch.

### BASSWOOD.

Grades : Firsts, Seconds, Commons and Culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long and free from all defects, except in pieces 10 inches and over wide, which may contain one sound standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Commons are four inches and over wide, 8 to 16 feet long. Four inch pieces must have one face clear and two clear edges. Pieces 5 inches wide must have one clear face. Pieces 6 inches and over wide must work three-fourths clear in not over three pieces.

Culls are 3 inches and over wide, 6 to 16 feet long, and include all lumber not equal to the grade of common that will work one-half without waste, of sound cutting, in not more than three pieces.

Note.—Black spots or streaks are a serious defect, and inspectors shall be careful in estimating their damage. If they are excessive they will reduce the piece one or more grades.

### ASH.

Grades : Firsts, Seconds, Commons and Culls.
Lengths, 6 to 16 feet.
Widths, 3 inches and over.
Thicknesses, 1, 1¼, 1½, 2, 2½, 3 and 4 inches.
Bright sap is no defect.

Firsts are 8 inches and over wide, 12, 14 and 16 feet long, and free from all defects, except in pieces 10 inches and over wide, which may contain one standard defect.

Seconds are 6 inches and over wide, 10 to 16 feet long. Pieces 6 and 7 inches wide are clear. Pieces 8 and 9 inches wide may have one standard defect. Pieces 10 and 11 inches wide may have two standard defects or their equivalent. Pieces 12 inches and over wide may have three standard defects or their equivalent.

Firsts and seconds 18 feet and over long will admit of 5 inch widths.

Firsts and seconds will admit of 10 per cent. or 10 foot length.

All tapering lumber 20 feet and over long to be measured one-third of the distance from the narrow end.

Commons are 5 inches and over wide, 8 feet and over long. Five inch pieces must have one face clear. Pieces 6 inches and over wide must be of sound character and work three-fourths clear.

Culls are 3 inches and over wide, 6 feet and over long, and include all lumber not equal to the grade of common that will work one-half without waste.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., MAY 25, 1898 No. 18.

**CANADA LUMBERMAN**

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

FOR SALE.

AT MONKLAND'S STATION, C.P.R., ABOUT 30 M feet 4/4 Hard Maple Log Run, mill culls strictly out. At Lancaster, by G.T.R. or boat, about 150 M feet 4/4 Elm, about 100 M feet 4/4 Ash, about 100 M feet 4/4 Bass, about 30 M feet Thick Maple, Oak. White Ash and Butternut. MCARTHUR & SON, South Lancaster, Ont.

## SALE OF BURNT AND OTHER TIMBER

A QUANTITY OF PINE TIMBER, ESTIMATED at five million, seven hundred and fifty thousand feet board measure, situated north and west of the East Branch of the Spanish River, in the vicinity of Rumsey Lake, having been partly damaged by fire, the undersigned hereby calls for tenders for the right to cut the same.

Tenders will be received up to and including the SECOND DAY OF JUNE NEXT, and must state the rate per thousand feet board measure, if made into saw-logs, or per thousand feet cubic, if made into square timber, which the tenderer is willing to pay as bonus, in addition to the ordinary Crown dues of one dollar and twenty-five cents per thousand feet board measure on saw-logs and twenty-five dollars per thousand feet cubic on square timber. Parties tendering may make an alternative tender of a lump sum as bonus, in addition to the Crown dues at the rates hereinbefore stated. Tenders must be accompanied by a marked cheque for $1,000. The party awarded the right to cut will have to give a bond, with satisfactory sureties, for the performance of all the terms and conditions which may be required by the Department

Mr. A. T. Belding, Forest Ranger at Biscotasing Station, C P.R., will give information with respect to the situation of the timber, etc, and further particulars as to the conditions may be obtained from this Department.

The figures as to quantity represent the Department's estimate only, and intending purchasers must satisfy themselves as to quantities and purchase upon their own estimates. The Department does not bind itself to accept the highest or any tender.

Tenders should be marked "Tender for Burnt Timber" and addressed to the Honourable the Commissioner of Crown Lands, Toronto.

J. M. GIBSON,
Commissioner Crown Lands.

Department of Crown Lands,
Woods and Forests Branch.

Toronto, 12th May, 1898.

FOR SALE

3 INCH TAMARAC, 12, 14 AND 16 FEET, FOR bridge and dock covering. CRAIG & AUSTIN, Kinmount, Ont.

FOR SALE.

AN OUTFIT OF PLANING MILL MACHINERY. Lists and prices on application to MISENER BROS., Brantford, Ont.

WANTED.—A contract for sawing from five hundred thousand to two million feet of pine lumber, or will buy a small raft of pine, elm or basswood logs. PACKARD & ROWAN, Owen Sound

FOR SALE.—Soft Maple: 20,000 feet inch, 25,000 feet 1¼ inch, 5,000 feet 1½ inch, 12 to 14 feet long; will average 10 inches in width, dry and in good condition. D. J. DRISCOLL, 84 Nepean street, Ottawa.

## Limits and Mill For Sale

THAT WELL KNOWN AND VALUABLE SAW mill property known as the Moore & Macdowall mill, in the town of Prince Albert, Territory of Saskatchewan, comprising saw mills fitted with modern machinery, having a capacity of 2,500,000 feet per month, together with a planing mill in separate building, containing planer, matcher, etc., with railway siding, large boarding house, one cottage, two large dwelling houses, and piling ground, the whole property comprising an area of about one hundred and fifty acres.

Also about two hundred and seventy-one miles of very desirable timber limits in the country tributary to Prince Albert, and about seventy-four miles tributary to Edmonton, the whole said to contain over three hundred million feet board measure of spruce and tamarac timber, large and of fine quality.

The limits are easy of access. Those at Edmonton are directly on the Saskatchewan, and those at Prince Albert are tributary to the same river. They are well watered, and the creeks easily driven.

Proposals to purchase this property will be received up to 15th July next by John C. Brown, Egan Block, Ottawa.

Should this property not be sold by private sale, it will be offered for sale by auction at a later date, of which due notice will be given.

For further particulars apply to

WILLIAM LITTLE, Prince Albert, Sask. JOHN C. BROWN, Ottawa.

R. B. KESSEN, Temple Building, Toronto. J. B MONK, Winnipeg, Man.

### SHIPPING MATTERS.

The current rates on lumber from British Columbia to foreign markets are as follows: Sydney, Aus., 47s 6d; Melbourne or Adelaide, 50s; Port Pirie, 45s to 47s 6d; Freemantle, 57s 6d; Yokohama, 42s 6d; Valparaiso, f.o., 42s 6d to 45s; U. K. or Continent, 60s to 62s 6d.

The following charters are reported: Bark Bristol, West Bay, N.S., to w.c. England or e.c. Ireland, 51s. 3d.; ship Cora, St. John, N. B., to Bristol, deals, 57s. 6d.; ship Charles, St. John, N. B., to Bristol, deals, 55s.; ship Steinbora, St. John, N. B., to w.c. England, 52s. 6d.; bark Bertino, Pugwash, N. S., to Cork, deals, 47s. 6d.; bark Fillippo, Miramichi to Cork or Belfast, deals, 52s. 6d.; ship Herminius, St. John, N. B., to Liverpool, deals, 52s. 6d.; W. W. McLauchlan, Apple River, N. S., to French port, deals, 55s.; a 1,300-ton ship, Saguenay to Buenos Ayres, lumber, $10; ship Forest King and bark Avonia, West Bay to w.c. England, deals, 50s.; two steamers from St. John, N. B., to w.c. England, deals, July loading, 53s. 9d.

### CURRENT TRADE CONDITIONS.

ONTARIO.

One peculiar feature of the pine trade is the brisk demand for common and low grade stock, due to extensive building operations and the activity in box making. While the upper grades still sell at a high price, the demand is not as strong as last year. In the Ottawa valley unsold stocks compare very favorably with those usually held at this season of the year, with probably a little more of certain grades. The market, however, is weaker, and we believe stock can be purchased at lower prices. The cut of last year is now being shipped out. Local trade on the Georgian Bay is good, but apart from this the market is featureless. Hardwood manufacturers are holding stock very firm, having recognized the fact that a shortage in this year's supply is quite probable. Some contracts recently offered for ash and elm were declined by many mill owners owing to inability to furnish the stock.

QUEBEC AND NEW BRUNSWICK.

The outlook for Quebec trade is certainly not very promising. No stock of any account is being cut for the United States market, and the high freight rates ruling have darkened the prospects for British trade. In another column the situation in eastern Quebec is reviewed by a correspondent. In New Brunswick some of the spruce mills are shutting down owing to the depression and inability of shippers to obtain vessels at satisfactory rates. Freights rule at 52s 6d to 55s from St. John, N. B., to west coast England, but even at these figures some vessels have been chartered. Deal prices are still nominal.

MANITOBA AND BRITISH COLUMBIA.

The report comes from Manitoba that several operators have been unable to get their drives out owing to low water, and as a result the lumber market has strengthened. An advance of $1 per thousand has been made on nearly every class of stock, covering timber and dimension, boards, shiplap, flooring, siding, etc. No change has been made in finishing material. The Pacific coast mills have also announced an advance of $1 on the following lines: No. 3 fir flooring, 1×4 and 6; No. 3 fir flooring, 1×3; No. 2 fir siding, 1×6; No. 3 fir siding, 1×6; No. 2 fir ceiling, 1×3, 4 or 6; No. 3 fir ceiling, 1×3, 4 or 6. Although retail prices have not yet been changed, there is no other way of meeting the advance made by the manufacturers than by adding a corresponding amount to the selling price. This is likely to be done immediately. Trade in British Columbia is expanding, most of the mills being busy on eastern and local orders, and some being compelled to run day and night. The agricultural outlook of the the coast district is excellent, and farmers look forward to a prosperous year. Many new buildings are in course of erection or contemplated.

UNITED STATES.

In the Eastern States there have been indications of reviving trade within the past few days, although the demand is not yet what it should be at this season of the year. Only very light shipments have been made from wholesale points, the one place showing the most activity in shipments being Albany, where pine and spruce stocks are very light. The main cause of the present dullness is the cessation of building operations in the principal eastern cities. Buffalo is doing a fair trade in pine, New York is quiet, and at Boston about the only encouraging feature is the requirement of material to be used in the naval yard. Pittsburg, Pa., does not seem to have been affected by the war, and wholesalers report a good business. The lack of demand from the east has caused holders of stock at western manufacturing points to feel a little uneasy as to the future. It was expected that as the season advanced eastern wholesalers would be compelled to buy at the prices asked, but there has been so little demand that present stocks have been found ample, and the tendency of mill men is to yield a trifle on certain lines. The exception to this is framing dimension and box lumber. Owing to the light supply of Norway logs last winter the production of piece stuff will be comparatively small. As to box lumber, there has been a scarcity of these grades all spring, and low grade stock is selling better than good lumber. Box lumber has sold at a good price when other stock could not be marketed at a fair figure, and early in the season nearly all the No. 3 and No. 4 boards on Lake Superior were bought up. At the present time the consumption of box material is not so active, but there is yet a demand out of proportion to the dry stock available. When the new cut is in condition there may be a slight weakening in price, but this is not likely to occur for several weeks yet, if at all. A report comes from Duluth that many logs may be hung up.

The hardwood market is a trifle easier, and a falling off in demand is reported. The furniture factories are not operating as vigorously as they were, and this has visibly affected the trade. There is also less enquiry for finishing lumber. The leading hardwoods, however, are still firm, and ash, elm, basswood and oak sell readily. Dry ash in particular is scarce, and promises to be much sought for in the near future. It is being used largely for agricultural machinery and wagons.

FOREIGN.

So far as the British market is concerned, the tendency during the month of May has been distinctly upward. While a few weeks ago there was little hope of prices of any Canadian goods advancing, to-day fully 10s more is being obtained for spruce. This rise is the result of the great scarcity of tonnage, owing to the large quantity of freight waiting shipment and contracted for from the St. Lawrence. It is expected that a great number of tramp steamers will be induced to engage in the grain carrying trade, which will somewhat relieve the situation, and may be the means of keeping the rates from going any higher. A cargo of spruce from St. John is reported to have changed hands at £6 7s c.i.f., and a yarded cargo at £6 10s, which shows the

advance. There is, of course, no scarcity of spruce as yet, but at certain points, notably Manchester, builders' sizes, i.e., 2½ and 3 in. by 7 in., are inquired for from all directions. The pine trade is also in better shape, and some contracts have been cancelled owing to the high freight rates, which will necessitate importers drawing for their requirements on stocks already on hand. The position of pitch pine is exceptionally strong, late sales having been made at 51s 6d c.i.f. for 30 feet average and 52s 6d for 35 feet. In hardwoods the market is not particularly active.

### STOCKS AND PRICES.

The Ontario Lumber Co. have this spring shipped about 1,000,000 feet of lumber from Midland to Toronto.

J. G. Henry, of Sudbury, has secured a contract from the Canadian Copper Co. for building a trestle to the smelters. It is estimated that the work will require 400,000 feet of lumber.

There were 13,235 standards of New Brunswick and Nova Scotia spruce in Liverpool on May 1st, compared with 4,634 standards one year ago.

Ross Bros., of Buckingham, Que., who cut 213,000 logs last summer, will saw only 80,000 this season, of which 35,000 were left over from last summer.

The steamer St. John City sailed from St. John for London recently, taking 300 tons of pulp from the Weymouth and Chatham mills, and 60 standards of deals.

The Saginaw Lumber & Salt Co., of Saginaw, Mich., has purchased 15,000,000 feet of Canadian logs in addition to the 12,000,000 feet of the company's stock put in last winter.

A. Cushing & Company have chartered the schooner Evolution to take a small cargo of pine deals to England, the first small vessel accepted for the trans-Atlantic trade for several years.

The Bryan Mfg. Co., of Collingwood, Ont., have received a contract from the Midland Elevator Co. to furnish 600,000 feet of 2-inch dressed plank for the construction of their elevator at Midland.

The St. John Sulphite Co., of St. John, N.B., announce that they are in the market for large quantities of pulp wood. The company have purchased 1,250,000 feet of spruce at Loch Lomond.

A well-known dealer informs us that he is prepared to purchase 2,000,000 feet of ash, log run, mill culls out. Manufacturers in a position to handle this order may obtain the address of our correspondent by communicating with this office.

The schooner Dora, of St. John, cleared from Parrsboro, N.S., last week for Vineyard Haven, with 730,000 laths, shipped by the Newville Lumber Co. The schooners Mary Gray, St. Croix and Bessie G cleared for New York with piling.

The Norwegian bark Nora cleared last week from Parrsboro, N.S., with a cargo of deals for Dublin, Ireland. This is the first deal vessel of the season from that port, but it is understood that a number of other charters have been made.

Three cargoes of lumber were recently loaded at Parry Sound for shipment to the Stuart & Hartshorn Co., shade roller manufacturers, of Muskegon, Mich. The stock was supplied by Gilmour & Co., of Canoe Lake, and shipped to Parry Sound by rail.

The Rathbun Co.'s drive of logs, which left the Big Marsh on April 17th, is expected to reach Belleville about June 1st. This drive consists of about 14,000,000 feet, of which between 10,000 and 15,000 pieces were boomed at Tweed to be cut into ties and lumber there.

The s.s. Turret Cape was the first steamer to leave Quebec this season, with a cargo of deals, shipped by H. R. Goodday & Co., for Great Britain. The same exporters are loading the first sailing vessel, Hefni, arrived at Quebec this season, to load lumber for the Old Country.

It is said that Donald Fraser & Sons, of Fredericton, N. B., will go into the manufacture of box shooks and other short lumber for the British market, instead of shipping it all in the form of deals. The head of the firm has recently returned from a trip to Great Britain.

A correspondent at Botwoodville, Nfld., states that the Exploits Lumber Co.'s drive of 3,000,000 feet has been landed in the boom, and that the mill will start operations about June 1st. Of this stock 2,000,000 feet is white pine and 1,000,000 feet spruce, cut from 12 to 20 feet, with average about 15 feet. The manager of this company is Mr. George A. Fowler.

Mr. E. C. Grant, of the Ottawa Lumber Co., has made arrangements to have sawn on the Mont Fort railway 75,000 spruce logs, taken from his limit on the Rouge, in the township of Montcalm. The stock will be loaded direct from the saws onto the cars, being conveyed from there to steamer at Montreal for shipment to the British market. Mr. Grant is also taking out a quantity of square birch and ash for shipment to Germany.

A report from New Brunswick states that the drives are getting along well, and it is probable that very few logs will be hung up. John Kilburn and Gilman Bros. & Burden have their logs in safe waters, while recent rains have greatly improved the prospects for other drives. Gibson's lumber drives on the Nashwaak river, containing 19,000,000 feet, is in the boom limits, as are also the drives of Richards, Vaughan, Welsh and Lynch, of the Southwest Miramichi.

Concerning the Glasgow market the Timber Trades Journal says: A cargo of St. John, N.B., deals is presently expected by Singleton, Dunn & Co., per "Coringa." The only arrivals of lower port deals this year so far have been the parcels by the regular line of Donaldson steamers from St. John, N.B., the aggregate of which has been considerably less than came to hand by last year's winter service. There have been no St. John, N. B., birch imports, as against about 2,800 loads at this period last year, including logs and planks. A marked improvement has taken place in values of birch logs. Of birch planks there is still a considerable stock, notwithstanding the absence of imports. There has been no public sale to report during the past week.

At the last meeting of the Winnipeg Board of Works three tenders for lumber were received, as follows: D. E. Sprague, for various dimensions specified, $14, $15 and $16 50; siding, No. 3, white pine, $23; flooring, No. 3, white pine, $23; boards, 2nd, common white pine, $15.50; boards, culls, $12; shingles, No. 1, cedar, $2.75. T. D. Robinson, $14, $15, $16.50, $22.50, $22.50, $16.00, $16.00, $11.50, $2.75, respectively, for the different grades. Dick, Banning & Co., $14.70, $15.00, $15.25, $21.00, $21.00, $14.50, $14.50, $11.00, $2.25. The tender of Dick, Banning & Co., which was the same as their previous tender with the exception of an advance of 25 cents on one size of dimension, was accepted.

### THE SITUATION IN EASTERN QUEBEC.

[Special Correspondence of the CANADA LUMBERMAN.]

The saw mills in the eastern part of Quebec province have commenced operations for the season, the logs in most cases having arrived at the booms or in safe waters; and while the market conditions are not as favorable as the mill owners would like, yet they are sawing and piling the cut when they have no orders in hand. There is being sawn a lot of 2½" x 6" and 7", these sizes being staple for the east coast of England and also for the French markets; of course, the latter requiring the lengths marked metrically instead of in English feet.

The American market is in such a state that very little account seems to be taken of it just at present in the way of sawn lumber, but a large quantity of pulp wood is being sent forward from Quebec to the Eastern States. In sections where the timber is small, say 10" diameter, the trees are felled and sawn into 4 ft. lengths, while where there are mills larger logs are used, these being cut into 18 inch lengths, barked and split. Judging by the piles of pulp wood seen at the stations and along the different lines of railway there must be, in the aggregate, an immense quantity exported yearly. The question of an export duty which is being agitated would certainly seem to be a necessary measure, or, as an alternative, prohibit the exportation of spruce wood less than, say, 9 inches in diameter. With this provision the life of the spruce forests would be very much prolonged. The foreign paper makers and the exporters of sawn lumber could bid up to the value to each for logs above the size limit; of course it may be said that this prohibition would bear heavily upon the small producers, but the principle is applied in some other things, notably in the canning of lobsters, which is even more important as affecting the interests of future generations, and extending, as they do, over a far greater area and proportionately greater number of people.

Just here it may not be out of place to relate a conversation the writer had with a pulp man who manufactures on the other side of the line, the substance of which seems to be a very strong argument for the imposition of an export duty on our woods. Asked as to the supply of pulpwood at home, he said: "We have considerable, but it is worth more standing than wood can be bought for here, including the freight charges." Now, the simple deduction from this is to impose the duty and let the foreigner use his own supply while it lasts if he does not care to pay the export charge; then in a very short time he will be glad to pay the real value of what we have to sell. By real value is meant a fair stumpage and the cost of labor in cutting, peeling and hauling to delivery points—a value which is not generally realized at the present time.

The clapboard industry is a prominent one in the eastern townships, and the fact of there being a duty on the manufactured article going to the United States, while the logs are free and the freight rates upon them more favorable than on sawn lumber, tends to drive the manufacturing of clapboards across the line. At least one of the most prominent manufacturers has moved his mill into New Hampshire, where he will be in a position to take advantage of this condition of affairs; but the country loses a good consumer and a large employer of labor.

Owing to the complications across the border, this may not be the proper time to push this matter to its logical conclusion, but an export duty on logs is certainly a necessity as far as spruce timber is concerned.

The cedar shingle business of lower Quebec and New Brunswick is feeling the effects of the low range of prices, and the manufacturers in the vicinity of Campbellton have in view—in fact, have already held one or two meetings to consider the question—the formation of an association for the purpose of protecting their interests and preventing the slaughtering of prices as prevailing for a year or so past. While in the main the shingle business is in the hands of strong men, there are a few smaller concerns running one and two machines, and who are forced by financial considerations to sell their product at any price offered, and while they could not nearly supply the market, the prices they are forced to accept are given as the market quotation. The brokers naturally take advantage of this condition of affairs, and in the absence of an association or an understanding between the stronger manufacturers, set all bidding for the trade, by stating what they can buy from a certain manufacturer for, in which case the chances are great that the figures would be shaded a little. In this way prices have been beaten down to their present low average.

The output of both cedar and spruce is somewhat less than last year, but will no doubt be large enough to supply the demand, taken in connection with the stocks held over by mill owners and the surplus in brokers' hands. Should this consumption be normal the prospects are that by next year prices will afford a living profit.

River driving has been very good this spring; while there have been no heavy rains, the great quantity of snow melting kept the river water just about right, and some heavy drives that usually take in the neighborhood of forty days came out in thirty.

The mills have got to work and are turning out lumber in good shape. One noticable feature is that great care is being exercised in sawing very carefully to specifications—squaring up, trimming and qualifying better than usual. New markets are being sought in a good many cases, and too much attention cannot be given to the details of manufacture.

The Spanish-American war is a disturbing element with lumbermen as with others. It is to be hoped that the result will settle affairs for once and all.

### THE BRITISH MARKET.

The rise in freights of over 10s. per standard has had a marked effect on the spruce deal market, says the Timber Trades Journal. While 45s. was current a month or so ago, 55s. has just been paid for St. John to Bristol, and the same rate from Montreal, per steamer. A cargo of Liscombe Nova Scotia floated deals has just been sold in Liverpool at £6 10s. c.i.f., and while parcels per liners to London could hardly be given away a few weeks ago at such miserable prices as £5 12s. 6d. to £5 15s., £6 10s. is the price asked to-day. As regards deal rates from the Bay of Fundy ports, etc., they do not yet appear to have advanced to anywhere near a parity with the grain quotations from the United States. If charterers want tonnage they will have to advance their rates. Apparently the prices obtainable for goods on this side do not support a great rise in freights, but as the deals begin to come down on the other side for shipment tonnage will have to be provided regardless of rate. Although we cannot hear of any actual advance in prices of American lumber in consequence of the outbreak of war, the market for all descriptions may be said to be very firm. We understand that at least one leading firm in the London trade made contracts for goods to arrive which their shippers were unable to fill in consequence of the rise in freights, and they have consequently had to draw for their requirements on the stocks of other firms lying in the docks.

## LUMBER FREIGHT RATES.

CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse and Rome, $2.20 per M ft, (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Quebec, $2.00; Arnprior to Montreal, $1.50 per M; Quebec, $2.50; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to New York, via Albany and Williams Line, seasoned pine lumber and shorts, in lots 50 M feet and over, $2.50 per M; under 50 M feet, $3.00 per M; from Arnprior, lots over 50 M feet, $3.00; under 50 M feet, $3.75 per M; from Parry Sound, lots 50 M feet and over, $4.00 per M; seasoned lath from Ottawa, lots 250 M pieces and over, 50 cents per M pcs.; lots under 250 M pcs., 60 cents per M pcs.; from Arnprior, lots 250 M pcs and over, 60 cents per M pcs.; under 250 M pcs., 70 cents per M; from Parry Sound, 80 cents per M pcs., lots 250 M and over; (rates named on lots under 50 M feet lumber and 250 M pcs. lath subject to extra towage. Rates on 50 M feet lumber and over and 250 pcs. lath are applicable to all points in New York city excepting points above Madison avenue bridge in Harlem river, to all points in Brooklyn, and to Jersey City proper; Ottawa to Boston, Portland and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.; Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent, C.P.R., writes as follows under date of February 14th, 1898: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior, Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30,000 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa, Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M feet and over, $3; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 55c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $3.25; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4.25; under 50 M feet, $4.50; lath, 250 M pieces and over, 60c. per M pieces; under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3.50; under 50 M feet, $3.75; hardwood, 50 M feet and over, $4.50; under 50 M feet, $4 75; lath, 250 M pieces, 65c.: under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts, 50 M feet and over, $3.75; under 50 M feet, $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 70c.; under 250 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c. per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.: lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 11c. per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil. The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber."

## CANADIAN EXPORTERS AND WHOLESALERS

THOS. MEANEY & CO.
103 Bay Street - TORONTO
WANT Rock Elm 1½ to 3" thick, 12 to 16 feet long
Will pay Good Price for Good Stock.

SPECIAL: FOR SALE
About 600 M feet Inch Box and Sidings, Mixed Lengths.
Pine Bill Stuff cut to order. Sixteen Inch Pine Shingles always in stock.
Please write for Particulars.

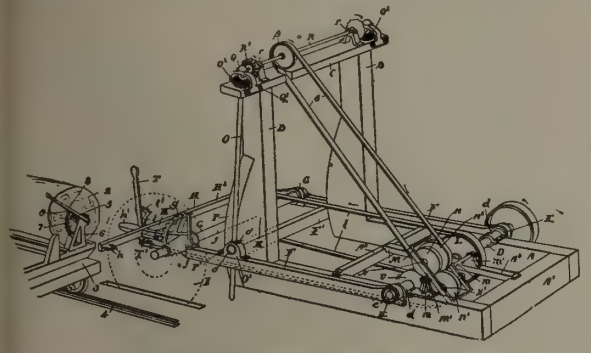
## RECENT CANADIAN PATENTS.

THOMAS Bearman, of Owen Sound, Ont., has been granted a patent, No. 58,754, for a circular saw machine, as herewith illustrated. The claim is for a lumber sawing machine, in combination, a suitable frame, a swinging frame, a saw located at the outer end thereof on the end of a suitable shaft, suitable uprights supported on the frame having suitable bearings on the side bars of the swinging frame, slots in the bearings, screw spindles screwed through the trunnions, means for retaining the screw spindle, means for raising and lowering the outer end of the swinging frame, a supplemental swinging frame, pivoted on an extension of the frame and extending



CIRCULAR SAWING MACHINE.

on each side of the cutting edge of the saw, and means for adjusting and holding the supplemental frame in any desired position; also having bevel pinions at the upper ends of the screw spindles, a ball and socket bearing for the upper end of the screw spindles, a countershaft provided with bevel pinions meshing with the bevel pinions at the upper end of the screw spindles, the pulley on the countershaft, the pulley on the main shaft, the minor swinging frame having two spindles with abutting friction pulleys, a supplemental pulley on one of the spindles of the abutting friction pulleys, and a belt connecting such supplemental pulley to the pulley on the countershaft. The combination with the circular saw, suitably supported and driven, and means for adjusting the same above and below the centre of the log, of the carriage, the lathe points for supporting the log, the lever secured on the square end of the lathe point, and the quadrant with which the lever is designed to co-act, etc., etc.

A patent has been granted to Mr. John Sharp, of Gravenhurst, Ont., for a water wheel, as shown by the accompanying cut. The claim is for a wheel secured to a vertically journalled shaft, and a series of radial buckets inclined from the vertical at substantially an angle of forty-five degrees, and secured to the rim, in combination with a frame surrounding the buckets, a cover therefor provided with a series of openings, each extending over two or more buckets, and a curved conductor

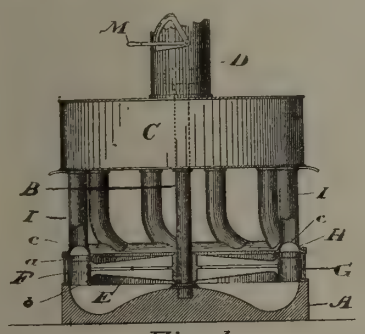


*Fig. 1.*

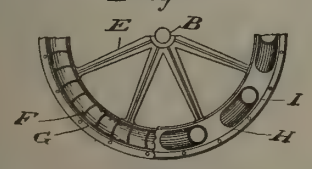

*Fig. 2.*

TURBINE WATER WHEEL.

connected with each of the said openings and with a source of water supply, the arms in the conductors being such as to discharge the water at substantially a right angle to the surfaces of the buckets; a curved conductor connected with each of above said openings, a tank with which the said conductors are connected, a flume connected with the tank, a cut-off valve in the said flume, and a cut-off valve for each conductor, substantially as set forth.

## BOLTON COMBINATION MOVEABLE SAW STRETCHER AND SHEAR.

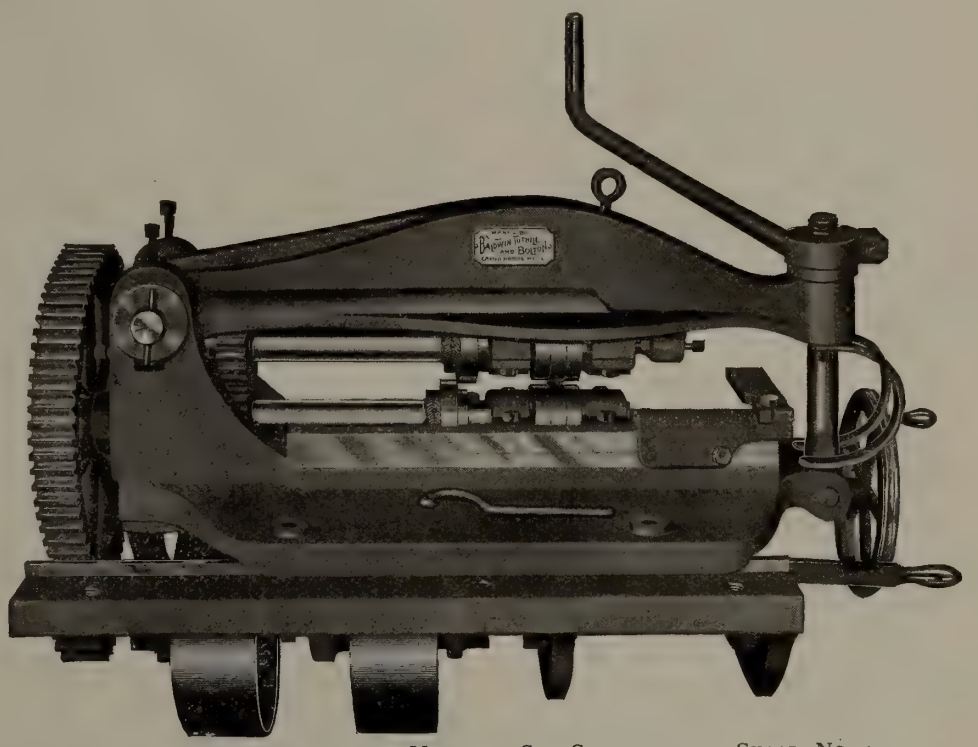
THE fine tensioning of band saws being so essential to the best results in their operation, it stands to reason that a good machine for this purpose is indispensable. The Bolton 12-inch combination movable saw stretcher and shear, No. 5, herewith illustrated, is manufactured by Messrs. Baldwin, Tuthill & Bolton, of Grand Rapids, Mich., and is claimed to be the finest thing on the market for tensioning band saws. A few of the features of advantage claimed by the makers are enumerated below.

The Bolton stretcher No. 5 has geared rolls for tensioning, and a pair of shearing disks adapted to shear either the back or toothed edge of a band or gang saw. It is equipped with reverse motion to drive the rolls instantly in either direction. The entire machine is mounted on a heavy bed plate, with two V tracks, over which the machine is moveable laterally by hand wheel to adapt the rolls to act on any part of the width of the saw. Pressure of rolls is obtained by lever and coarse lead screw, and maximum pressure of rolls is obtained by less than one-quarter turn of the lever. This affords quick application or removal of pressure, advantages that will be apparent to every saw filer.

The shear feature is a very useful one, especially in mills that have to contend with gravel or iron in the logs. The shears feed the saw through the machine at the regular speed of rolls when run in tensioning, and make a straight, clean, smooth cut of any width. Three minutes, or less, are usually sufficient to shear a 50-foot saw. There is no mill that will not at times find this shear an invaluable device for use either in shearing a saw from which the teeth have been stripped or one with edge cracks, or for cutting a strip to proper width to braze in. When the shears are not required for use, they may be set to one side out of the way by use of the spanner wrench furnished with machine. The machine is equipped with guide for back or face of saw for use when shearing, a gauge for use when tensioning, elliptic springs for raising upper roll when pressure is diminished, very heavy, powerful cut gears, and two grip clutch pulleys for motion.

The movable feature, which gives the entire machine a 12-inch lateral movement across the bed plate or track, and so adapts the rolls instantly to act on any part of the width of saw, is a convenience of especial advantage on wide, heavy log band saws, because the filer has no occasion to move or change the position of the saw laterally, which is necessarily heavy and unhandy to move. It is manifest that this system of moving the entire machine bodily across the saw is vastly better than a lateral movement of only the shafts carrying the rolls. By this system we have absolute power, no possible lost motion, no change in the roll shaft bearings with respect to the rolls, while the rolls cannot fail to track perfectly, travel together, with the shafts always parallel and so heavy that they will not spring.

This stretcher is the heaviest and most powerful machine in the market. It will tension or act on the hardest spots in the heaviest gauged saws with absolute certainty of affording desired results. The rolls are made up of solid steel, ground mathematically true on the most approved segments, that never fail to please. In the makeup and grind of the rolls, which are vital elements to the success of a machine, this stretcher has given the best of satisfaction. It renders the use of hammers largely unnecessary, prevents crystallized spots with the resultant cracking and brazing of saws, makes no hammer marks, prolongs the life of the saws, economizes saw bills, saves the saw filer both time and labor, affects all parts of the blade uniformly according to pressure exerted, restores quickly and uniformly the tension lost by strain of too rapid feed, affords straight running saws that cut to a line, soon pays for itself by increased quantity and improved quality of output, makes possible the use of the thinnest blades, thus saving saw kerf and money, and does not require a skilled filer to operate it, but enables the unskilled filer to greatly improve his saws. The requisites of a good machine are a heavy body, shafts that will not spring, perfect alignment and tracking of the rolls, rolls ground on proper segments, and abundant power with short leverage. Given a machine as above described, the make and grind of the rolls are the vital parts. It is in this respect that some machines are defective. The rolls may not travel together, may not track together, may be of different diameters and may not be properly crowned. This machine is free from such defects, the rolls being made up solid of the best imported steel by special process and ground on a grinding lathe built expressly for this work, by means of which they are ground absolutely perfect.



BOLTON 12-INCH COMBINATION MOVEABLE SAW STRETCHER AND SHEAR, NO. 5.

Further information may be obtained from the makers, Messrs. Baldwin, Tuthill & Bolton, Grand Rapids, Mich. Our readers are asked to write for their new 200-page catalogue, containing a valuable treatise on the fitting of all classes of saws, and "Economics for Millmen," which they will mail free to all saw filers and millmen.

---

Mr. N. D. Seaman, Owen Sound, Ont., in remitting for an advertisement in the WEEKLY LUMBERMAN, writes:—"I am well pleased with the returns for the investment. The returns for this 'ad' far exceeded my expectations." To lumber manufacturers and dealers having stock to dispose of, the moral is plain.

In the saw mills of Canada many different methods are employed for doing similar work, each one, perhaps, possessing certain points of merit. Superintendents, sawyers, filers, etc., are respectfully asked to contribute to this journal their views as to the best method of doing certain mechanical work, such as lining and setting up shafting, setting up rotary and other circular saws, rules for finding out and marking off the shape of circular saw teeth for guidance in grinding and filing.

# THE NEWS.

—Craig Bros. have purchased a saw mill at Midland, Ont.

—J. M. Mackney is opening out in the lumber business at Morris, Man.

—S. Salmon & Co. are building a sash and door factory at Avonmore, Ont.

—The Assiniboine Lumber Co., of Brandon, Man., have added a lath machine.

—McIlhaney Bros. are building a steam saw mill at Richmond Corner, N.B.

—The Gillies Bros. Co. are erecting a shingle mill between Arnprior and Braeside.

—R. Gaw's planing mill at Kingston, Ont., was burned last month, the loss reaching $10,000.

—Sawyer Bros., planing mill, of Coldwater, Ont., have gone to Revelstoke, B.C., to engage in same business.

—Frank Lavin has purchased the saw mill and lumber business of the Salmo Lumber Company at Salmo, B.C.

The business men of Baie St. Paul, Que., are endeavoring to organize a company to erect a chemical pulp mill.

—Mr. Kerr, of Walkerton, is considering the erection of a factory at Parry Sound for the manufacture of woodenware.

—The Patent Cloth Board Company, of Parry Sound, Ont., are shipping cloth boards and veneer to Great Britain.

—A. McPherson & Co.'s shingle mill at Longford Mills, Ont., is again in operation. Robert Marshall, of Washago, is in charge.

—L. E. Parsons has removed his steam saw mill from Golden Lake to Barry's Bay, about one mile from the site of the O. A. & P. S. station.

—The Rathbun Co. have sold out their stock of sash, doors, etc., in Winnipeg, to the Rat Portage Lumber Co. and Turnbull & McManus.

—Mr. Savoye, of Brompton, Que., has made a proposition to the town of Sherbrooke, Que., to establish a box factory there, agreeing to employ 25 hands.

—The Assiniboine Lumber Co., of Brandon, Man., have closed their branch at Souris. T. H. Patrick, their manager, will start business there on his own account.

—The Dickson Company, of Peterboro', Ont., have built a new saw mill at Lakefield. The burner in connection is 85 feet high, 23 feet in diameter and 72 feet in circumference.

—J. P. Mosher, of St. Martins, N. B., has made improvements to his saw mill, including new rotary and patent edger, boiler and engine. He now has both steam and water power.

—Joe Beeler is said to have been arrested for stealing government timber in North Idaho and rafting it across Kootenai Lake into Canada. His thefts amount to $25,000 to $30,000 in value.

—Jonas Malott, of Tilbury East, has closed a contract with Frank W. Wilson, of Chatham, to start a nursery, and will plant 50,000 spruce trees on his farm. The trees will be ready for delivery in three years.

—The Moodyville Saw Mill Co., Moodyville, B. C., gives its slabs to Chinamen, who take them away to a burner, where they are turned into charcoal. A market for the charcoal is found amongst the canneries.

—A dispatch from Montreal, dated May 9th, stated that forest fires were raging in the district to the north of Montreal. The mountains and highlands from Ste. Agathe to Labelle were being swept by the fires.

—The Cody saw mill, near Sandon, B. C., has been purchased by Mr. Bascom, and the machinery has been shipped to the line of the Crow's Nest Pass railway, where it will be used in cutting construction timber.

—Woodman & Miller, of St. John, purpose building a large mill on the boundary line between Quebec and New Brunswick, on Madawaska river. They intend having shingle, planing and turning lathes, also rotary, etc.

—A western exchange says that when the Hastings mill people went to Vancouver, B.C., in 1864, to build a saw mill, they took along two cannon to keep off the Indians. The cannon still stand in front of the general office.

—William Clark, of Galt, Ont., has patented a saw-setting machine, which is so constructed that it will automatically and regularly feed the saw to the setting dies, which are so arranged as to set the teeth at any desired angle to the blade.

—Cornell University, Ithaca, New York, has established a college of forestry, with Professor B. E. Fernow, chief of the forestry division of the agricultural department of the government, as director. This university is said to be the first in America to take this important step.

—Wm. Harris, of Day's Mills, Algoma, Ont., offers power and mill site free, with small bonus, to any responsible party who will erect any kind of wood-working, furniture or handle factory. There is any amount of good hardwood and other timber near the site.

—The Vancouver, B.C., World says: The Department of the Interior, by dodgers tacked up in the post-office, is calling for tenders for a timber berth, in this province, of 480 acres. By the merest chance these dodgers can be seen, and certainly not by those engaged in the lumbering trade.

—Gilmour & Co. have just completed a new refuse burner at their Canoe Lake mills. They have lately added to their file-room outfit several new machines, of which one is a lap grinder purchased from Baldwin, Tuthill & Bolton, of Grand Rapids, Mich. This machine is capable of grinding both laps on a 10-inch saw in eleven minutes, and no filing is required after its use.

—West coast lumber is coming largely into use in the building of vessels and the new impetus that has been given to ship-building by the war. Fir for docking is especially in demand, and a United States Pacific coast concern has recently received an order from Philadelphia for a large order. The specifications call for material with not a knot or blemish of any kind, and the west coast lumber is the kind that can be furnished to comply exactly with such requirements.

## CASUALTIES.

—A young man named Ayotte recently had his leg broken in Gilmour & Co.'s mill at Algonquin Park.

—John McDougall, of South River, a river driver for M. Brennan & Sons, was drowned while working on McBrien's rapids.

—James Daly, a mill hand at W. J. Carnwath's steam mill at Chapman Creek, Riverside, N. B., was severely injured. Over 100 logs rolled over his body, but hopes are entertained of his recovery.

## PERSONAL.

Mr. William Gordon, lumber merchant, has been elected as alderman for the city of Stratford, Ont., to fill the vacancy caused by the resignation of Ald Mavor.

Hon. E. H. Bronson, of the Bronsons & Weston Lumber Co., has returned to his home in Ottawa much improved in health. He spent the past winter in California.

Robert Connolly, for many years a lumber operator in Cardwell and Sussex, N.B., has accepted the position of manager for C. M. Bostwick & Co. at Salmon river, St. John county, succeeding Mr. F. M. Anderson.

Mr. William Mackey, the well-known lumber merchant of Ottawa, has again contributed a gold medal to the Central Canada Exhibition, to be offered in this year's prize list live stock department as a special prize for the best team of general purpose horses.

The annual report of the Department of Interior states that Mr. James Leamy has been appointed Crown Timber Agent for British Columbia, in succession to Mr. Higginson, who was removed last year. Mr. Leamy's headquarters are at New Westminster, B.C.

Mr. J. H. Leonard, an esteemed resident of St. John, N.B., died last month after a few day's illness. He came to St. John from London, England, in 1848, being then 16 years old. He engaged in the lumber business with Mr. James Hunter and subsequently with Mr. James Wetmore.

Mr. J. M. Poitras, who entered the employ of the Rathbun Company of Deseronto—then Mill Point—nearly twenty-two years ago as general superintendent of their lumber department, in later years becoming general travelling agent, severed his connection with the firm on the 30th of April last to take a more responsible position with a leading Ottawa house.

It becomes our painful duty to chronicle the death of Mr. Walter McFarlane, of St. Mary's, N.B. Mr. McFarlane was well known in the lumber trade as a manufacturer of peavies and other lumbermen's tools. He had apparently fully recovered from a recent illness, and was attending to business as usual on the day preceding his death, but was suddenly stricken during the night. The deceased was held in high esteem in the community in which he spent the greater portion of his life, as well as by all who had the privilege of his acquaintance.

## MAGNOLIA METAL.

The Magnolia Metal Co. begs to inform users of bearing metals and the trade generally that on the 20th of April, 1898, in the United States Circuit Court for the southern district of New York, before the Honorable William J. Wallace, circuit judge, they secured a permanent injunction against Benjamin and Moses Lowenstein, trading as B. Lowenstein and Brother and as the Nassau Smelting and Refining Co., New York, restraining them from offering for sale or advertising "Mongolia Anti-Friction Metal," which metal they were advertising and selling as Magnolia Anti-Friction Metal, and which was calculated to deceive the public. The following is an extract from the decree of Judge Wallace:

"Ordered, adjudged and decreed that the complainant, the Magnolia Metal Company, is the owner of a good and valid trade mark, consisting of the word "Magnolia" as applied to anti-friction metals and alloys made and sold by it, and is entitled to the sole and exclusive use thereof, and that the defendants Benjamin Lowenstein and Moses Lowenstein (trading as the Nassau Smelting and Refining Company) have by the use of the word "Mongolia" upon anti-friction metal made and sold by them, violated and infringed upon the exclusive rights of the complainant in the premises, and it is further ordered, adjudged and decreed that the defendants Benjamin Lowenstein and Moses Lowenstein and each of them, their and each of their attorneys, agents, servants, clerks, salesmen and employees and each of them and all persons acting under them or their authority be and they hereby are perpetually enjoined and restrained from infringing the complainant's said trade mark and rights; and from marking, designating or advertising an anti-friction or other like alloy or metal as "Mongolia"; and from using on any alloy or metal for anti-friction or like purposes, or in conjuncture with manufacture or sale thereof, the word "Mongolia" or any other word calculated to deceive the public by a like close imitation of the complainant's trade mark "Magnolia," and it is further ordered, adjudged and decreed that the complainant recover from the said defendants as well the damage sustained in or by reason of said infringement as the profits, gains and saving made or realized by the defendants thereby.

## TRADE NOTES.

In a letter to the LUMBERMAN, Messrs. W. B. Mershon & Co., of Saginaw, Mich., state that the Mershon band resaws seem to be as popular as ever, and have now become a staple article. Sales keep up on a steady basis, and they have no reason to complain of a lack of orders in the band resaw department.

Messrs. R. B. Mowry & Son, of Gravenhurst, Ont., have been kept very busy fitting up local mills. The new mill of the Longford Lumber Company was supplied with a large quantity of machinery, including a pair of Mowry steam niggers. Other shipments were made last month as follows: Boss shingle machine to D. Hotte, Chelmsford; complete shingle cutting outfit to Cockburn & Sons, Cache Bay; shingle jointer to J. S. Playfair, Midland; match-making machine to the Rathbun Co., Deseronto.

Mr. Madison Williams, of Port Perry, Ont., reports that he is putting a 56 inch Leffel water-wheel into W. H. Johnston's mill, Pefferlaw, Ont.; a 30 inch Perfection, with shafting, gearing, pulleys, etc., into A. W. Carveth's roller mills, Orono, Ont.; feed grinder, to replace stones, with gears, shafting, etc., into E. Muir's roller mills, Pefferlaw, Ont., and has supplied a 40 ft. Lane saw mill carriage for Morris Shaver's mill, South Indian, Ont., and a 23 inch Vulcan wheel for J. Dugan Gray's mill at Garden Hill, Ont.

Messrs. Baldwin, Tuthill & Bolton, Grand Rapids, Mich., report that the Spanish-American difficulty is not interfering with their business in the least, as they have enough orders now booked to keep them running for a long time to come. They are doing fully twice the volume of business now that they were last year at this time. Among some of the larger orders on the book, and others which have been recently shipped, are complete large band saw filing room outfits to the following: Raine & Raine, Empire, Pa.; W. A. Jones & Co., Caledonia, Pa.; Erie Railroad Co., Buffalo, N.Y. Complete band resaw filing room outfits to Dewing & Son, Point Marion, Pa.; Jonathan Thomas, Topeka, Kans.; Harris Machinery Co., Minneapolis, Minne.; Thomas Merriam, Syracuse, N.Y.; Jones Lumber Co., Williamsburg, Ky.; R. G. Peters Lumber & Shingle Co., Benton Harbor, Mich. Three rift gang filing room outfits to W. M. Wilkin, Erie, Pa. Single machines and partial outfits to Arantz Bros, Decatur, Ala.; Standard Oil Co., Oswego, N.Y.; Maley & May, Evansville, Ind.; F. W. Read & Co., Marquette, Mich.; C. C. Thompson Lumber Co., Washburn, Wis.; C. C. Mengel, Jr. & Bro. Co., Louisville, Ky.; Tatum & Bowen, Portland, Ore; Estate of Thos. Nestor, Baraga, Mich.; W. B. Mershon & Co., Saginaw, Mich.; John A. White Co., Dover, N. H.; Chesbrough Bros., Emerson, Mich.; Howard Lumber Co., Lovett, Pa.; Ward Lumber Co., Whiting, Mo.; W. A. McLean, Cloverdale, Ind.; Paine Lumber Co., Oshkosh, Wis.; W. V. Davidson Lumber Co., Nashville, Tenn.; E. W. Leech, Lodi, O.; Peyton, Kimball & Barber, West Superior, Wis., etc.

## TABLE OF LUMBER WEIGHTS.

BELOW we give a table of weights for hardwood lumber in the rough. In making such a table, says the Hardwood Record, of Chicago, we appreciate the fact that it won't exactly fit everywhere, owing to the difference in texture of the same kind of timber in different localities. In some cases where there is a wide difference in weight, as, for instance, between northern and southern oak, we have given two weights and classified them. In all hardwoods, excepting soft elm, butternut, black ash, basswood, cottonwood and poplar, it has been the usual custom of dealers on this market, in computing freight charges, to figure dry stock at four pounds and green stock at six pounds per foot, and make allowance as in their judgment the character of the wood and locality might warrant. Hardwoods in the south, particularly oaks, are harder and closer grained than in the north, and hence heavier.

We believe, however, that the table presented below is about a general average, and needs only a slight adjustment in a few of the hardwood producing states. The figures given are in pounds per 1,000 feet.

| | Dry. | Green. |
|---|---|---|
| Ash, white | 3,200 | 5,000 |
| Ash, black | 3,000 | 4,500 |
| Basswood | 2,200 | 3,500 |
| Beech | 3,500 | 5,500 |
| Birch | 3,500 | 5,500 |
| Butternut | 3,000 | 5,000 |
| Cedar | 3,000 | .... |
| Cherry | 3,500 | 5,500 |
| Chestnut | 4,000 | 6,000 |
| Cottonwood | 2,800 | 4,000 |
| Cypress | 3,000 | 5,000 |
| Elm, rock | 4,000 | 6,000 |
| Elm, soft | 3,000 | 5,000 |
| Gum | 3,500 | 5,500 |
| Hickory | 4,500 | 7,000 |
| Maple, hard | 4,000 | 6,000 |
| Maple, soft | 3,500 | 5,500 |
| Oak, white, northern | 4,000 | 5,500 |
| Oak, white, southern | 4,200 | 6,000 |
| Oak, red, northern | 3,500 | 5,000 |
| Oak, red, southern | 4,000 | 6,000 |
| Poplar | 2,800 | 4,000 |
| Sycamore | 3,000 | 4,500 |
| Walnut | 4,000 | 6,000 |
| Yellow Pine | 3,000 | .... |

# WOOD PULP DEPARTMENT

## MANUFACTURE OF SULPHITE PULP.

A FEATURE of the paper making industry of Canada that has become very marked is the increasing production of chemical pulp. That, says the Canadian correspondent of the Paper Mill, is a departure of quite recent date. When the chemical mills of Chatham, N. B., were first started they appeared to have fair prospects, but, as a matter of fact, they had to pass through a comparatively long period before they began to earn a return on the capital invested. But their turn came at last. A new and more prosperous era opened for them some time before they were acquired by the company that now owns them, and has continued ever since. From a matter of merely domestic requirements, the demand expanded into one of large dimensions on export account.

The enterprise of the Chatham manufacturers secured so much British custom that they could scarcely attend to it all, and at the same time meet the call of paper mills at home. Having once turned this way the British demand opened out generously. The large capacity and good prices of the English market soon tempted other manufacturers into the business of making pulp sulphite. The several mills projected at St. John, N. B., and at other points in the maritime provinces are to make sulphite pulp. All aim to serve the British market.

Next the Ontario and Quebec manufacturers of sulphite pulp found that they, too, could ship to England at a profit, and they have been doing so. Then, to their surprise, a good healthy demand announced itself from the United States, and they were able to sell to customers in that market at a price which showed a long net advance in the values current at home. Hence, there has lately been a good deal of sulphite pulp manufactured in Ontario for export, both to England and to the United States. For example, the Riordon Paper Company, at Merritton, Ont., has for some time been giving special attention to the manufacture of chemical fibre. Its chemical mill has been greatly improved, driers have been introduced and the most approved means of manufacture have been utilized, with the result that a very choice article has been placed on the market, an article, too, which it is paying the company handsomely to turn out.

The manufacture of sulphite pulp has proved far more profitable than the turning out of news. Sulphite pulp yields a big profit, news does not. Certain it is, however, the Riordon Paper Company is going into the manufacture of chemical pulp on a large scale, and it is agreed on all hands that this product pays better than ground pulp or news. Further, so satisfied is Mr. Charles Riordan that there is money in the manufacture of sulphite pulp that he is contemplating a still greater departure into it. He has just returned from the province of Quebec, where he has been prospecting along the left bank of the Ottawa river to find a site for a big pulp mill. What he wants is a large tract of the right kind of timber, with a conveniently situated water fall. Mr. Barber of the Georgetown paper mills, is associated with him in this quest.

## THE CUSHING PULP MILL.

THE prospectus of the Cushing Sulphite Fibre Co., Limited, of St. John, N. B., has been issued. The directors are Joseph Allison, Thos. McAvity, W. H. Murray, George S. Cushing and Geo. S. Baird. With them as incorporators are George McKean and James Fleming. The solicitor and secretary is L. A. Currey, the consulting engineer James Beveridge, of London, Eng., and the bankers the Bank of Nova Scotia. The capital stock is $500,000.

The incorporators have subscribed $30,000 and as soon as the balance of the $250,000 now sought is subscribed the erection of the mill at Fairville will be begun. Steps have also been taken to introduce the stock in the United States and in England, with what are believed to be excellent prospects of success.

It is announced that when the stock is subscribed buildings will be erected to accommodate plant to produce fifty-six (56) tons of dry pulp per day; but in the meantime machinery for twenty-eight (28) tons per day only will be put down. The company have now made satisfactory arrangements with the City of St. John as to water supply, and are ready to proceed with the work of construction as soon as they are financially in a position to do so.

## PULP NOTES.

A meeting of the Nova Scotia Wood Pulp and Paper Company was recently held at Halifax, N.S., to consider the best method of paying off the present debts of the company.

Mr. Drew, a New Hampshire man, has purchased the seigniory of Mille Vache, below Tadoussac, on the Saguenay, in Quebec, and will erect a pulp mill there. It is a splendid point for shipping.

The Chicoutimi Pulp Company has asked the town for a bonus of $30,000, in consideration of which they agree to build a large sulphite pulp mill, in addition to their present mill. They agree to expend in all some $250,000.

It is announced that negotiations with the view of erecting a very large pulp and paper mill at Keewatin are pending, with a probability that before many months operations may begin on a plant that will produce 100 tons daily.

The Scandinavian market for pulp is very firm, which is attributed to a large extent to the hostilities now going on between the United States and Spain, it being considered likely that the exports from the former country will drop off considerably in the future.

Quebec and Montreal capitalists agreed to expend $4,000,000 in establishing industries at Shawenagan Falls, Que., within thirty months from June, 1897, in return for certain water power privileges. Engineers are now surveying sites for new works, which may include pulp and paper mills.

It is said that Mr. Donald Fraser, of Fredericton, N.B., who is now in England, will endeavor to interest British capitalists in the establishment of a pulp mill near that city. Mr. Fraser has acquired considerable information on the subject, and feels satisfied that such an undertaking would prove a profitable investment.

The new pulp mills of the Laurentide Pulp Company at Grand Mere, Que., are expected to be completed about the first of July. An inspection of the buildings was made last month by Sir Wm. Van Horne, Mr. T. G. Shaughnessy, and others. The iron flume for conveying the water power to the mill is nearly completed. It is 14½ feet in diameter.

The German papers are interested in the discussion as to quality of "news" and the relative values of the different blends of sulphite pulp and mechanical wood pulp, with some filling added if necessary. Some take 15 to 20 per cent. of strong sulphite, and remainder mechanical pulp, while others favor 30 to 40 per cent. cheaper sulphite and remainder mechanical. Some add 8 to 15 per cent. cotton waste to give more softness to the paper.

## LUMBERING IN CHILE.

In Chile all the small timber is cut down in the winter and left lying where it falls. This is called making the "roze." After the dry season is passed fire is put to this and the ground is well burned off, killing the standing timber. On the ashes wheat is sowed, and the first roze on good ground generally gives a crop of 50 bushels to the acre. After the harvest all the rauli, linge, canela, roble, laurel, and pellin are cut down and "trozada" (sawed in 12 ft. lengths), and logged to the mill. The branches and tops are then cut and strewed over the ground or piled up for the second roze.

The next year they are again burned off and again the ground is sown to wheat, giving an average, on good ground, of 50 bushels to the acre again. The year following, if any timber fit for the mill is left, it is cut down and logged, and a third roze is followed by wheat, giving generally 40 to 45 bushels to the acre. All timber still standing, such as coihue, and a few other varieties of little value, is then cleared off, and a fourth roze follows, again being sown to wheat. This again gives over 40—oftener still 50—bushels to the acre. The next year, providing the yield has not fallen below 40 bushels, wheat is continued, but the moment it falls below 40 bushels rye is sown, and when this falls below 40 bushels the land is seeded down to grass for pasture for the working stock.

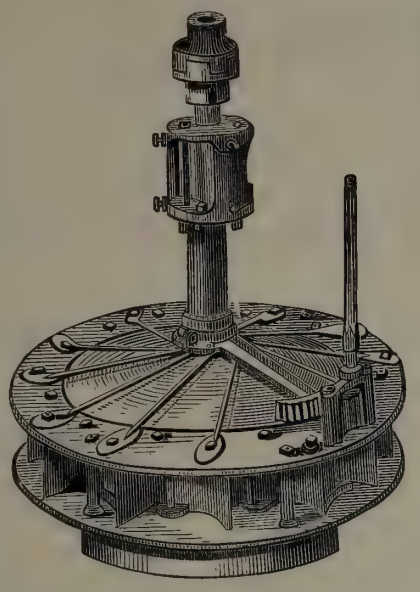
Readers are asked to contribute freely to the columns of the CANADA LUMBERMAN, and to send in items of news whenever possible. Let each subscriber resolve to report the news of his locality, such as changes of ownership, mill improvements, market conditions, etc., and the whole will comprise a valuable compendium of information.

Two thousand two hundred acres of cedar trees are cut down every year in order to make the wood cases for lead pencils, of which more than two thousand acres are in Florida, says an exchange. There are twenty-six pencil works in Bavaria, of which twenty-three are in Nuremberg, the great European centre of the lead pencil trade. These factories employ from 1,000 to 10,000 workers, and produce 4,000,000 lead and chalk pencils every week. One factory alone has a weekly production of over 1,000,000 pencils.



DRY WEATHER WATER WHEELS

With abundance of water, and indifference regarding results, most any old wheel can be made to go—more or less.

The **TOUCHSTONE** of **MERIT** and **VALUE** is to operate when the water supply is at its lowest, and the need for more is greatest. To-day is the time to provide for such a condition by placing

A "LEFFEL" A "VULCAN" OR A "PERFECTION" TURBINE

With no other wheel can the water supply be so minimized without destroying the efficiency of the wheel. These wheels give the very highest results under any and all conditions of water. Made to give any power from 1 h. p. to 2500 h. p.

## This Saw Stands Without a Rival

AND IS THE

**FASTEST CUTTING SAW IN THE WORLD!**

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

## Maple Leaf Saw Set

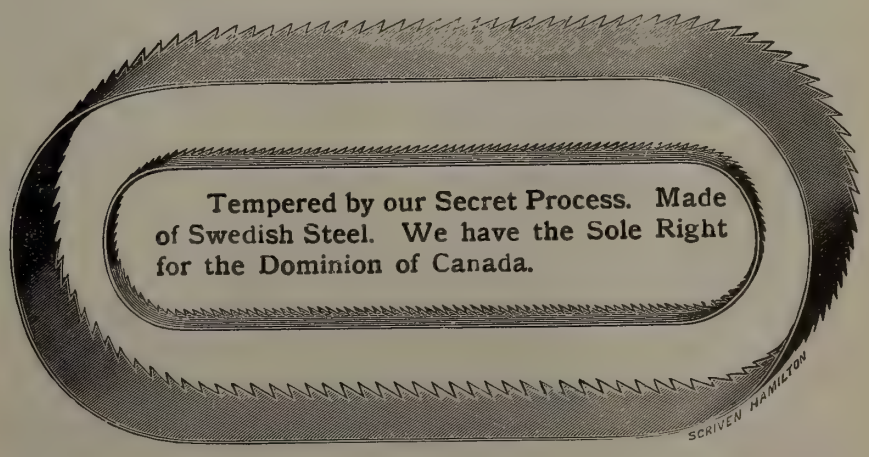
MANUFACTURED BY

**SHURLY & DIETRICH, Galt, Ont.**

**Directions.**—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

# HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

## RECORD OF A PROGRESSIVE LUMBERMAN.

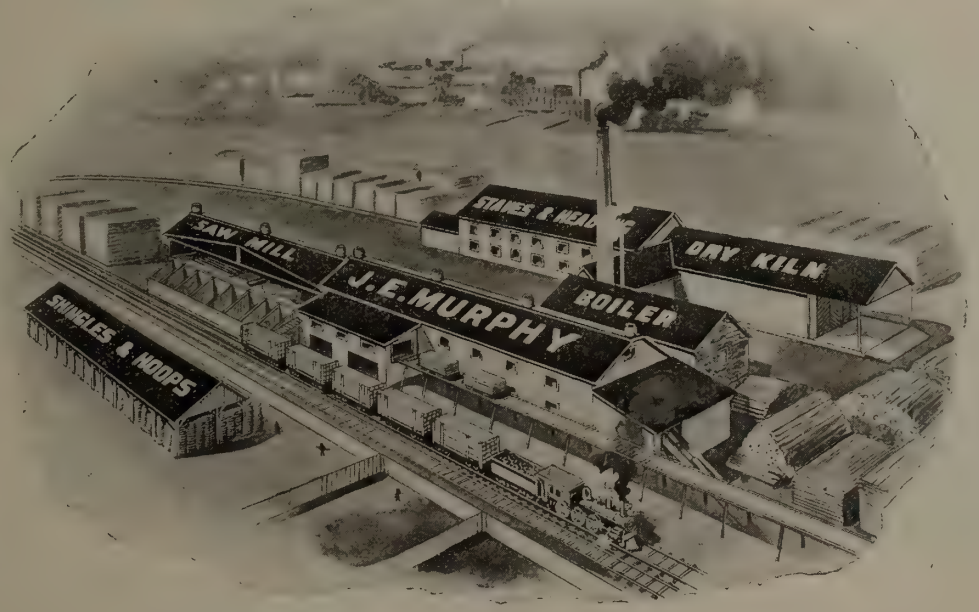
As one of the most enterprising and successful lumbermen in Western Ontario, a portrait of Mr. J. E. Murphy, of Hepworth Station, is presented to our readers. Mr. Murphy is so well known to the lumber trade that any introduction here would seem almost superfluous. Suffice it to say that his operations are confined to hardwoods and hemlock, and that he is one of the foremost advocates of a direct export trade in lumber and manufactures of wood between Canada and foreign countries.

The subject of our sketch left the printer's case in the city of Boston owing to ill health, in 1873, and entered the employ of Jones & Murphy, then a prominent firm of lumbermen in the County of Perth, where at that time considerable quantities of standing pine were owned by the firm in the townships of Elma and Logan. He continued in their employ untill their timber was about exhausted and a dissolution of the firm took place. In 1879 he purchased from his employers one of their mills in Logan township, and operated it for two seasons, when it became necessary to move the mill for want of timber. The G. B. and L. E. railway was then being extended northward from Chesley to the Georgian Bay, and in December, 1881, Mr. Murphy went north in search of a location, visiting Hepworth, Wiarton and Owen Sound, all three of which places he then looked upon as excellent locations for a mill. His capital being limited, he decided to locate at Hepworth, where he could build cheaper than at either of the other places. For the first year or two the business was not very remunerative, owing to the antipathy of the building trade to using hemlock, which was the staple variety of timber there, and which was found in abundance at that period. Things took a change, however, hemlock worked its way to the front steadily, and in a few years it was a difficult matter to yard as many logs as would supply his steadily growing trade. In 1889 Mr. Murphy lost his residence and contents, on which the insurance was unfortunately allowed to lapse, and the loss entailed in replacing the building and furnishings amounted to $4,000.

In the year 1890, in partnership with Mr. George Gates, of Alpena, Mich., Mr. Murphy built a large mill in Owen Sound, for the purpose of manufacturing north shore pine timber, but about the time the mill was ready for operation the export duty was removed and our logs made free to the Americans. The result of this was that logs advanced considerably in price, and loggers found it more to their advantage to sell their logs to Americans than to cut them on our own shores. The partnership was subsequently dissolved, and the mill, together with 2,200 acres of hardwood land on the Bruce peninsula, about 60 miles distant from the mill, sold to Messrs. Pickard & Rowan, who still operate it.

The erection of a new mill five miles west of Owen Sound, on the G. T. R. extension from Park Head, was the next venture of Mr. Murphy. There he built a splendid mill, where he has 500 acres of timber. But after getting two season's cut piled up he was again visited by fire in August, 1896, the whole establishment being destroyed, entailing a loss of $20,000, with only $7,000 insurance. Not easily discouraged, however, he immediately made preparations to rebuild, and the buildings shown in the accompanying illustration are the result. The original buildings have been added to from time to time, until they now include a complete and handy saw mill, shingle mill, stave, heading and hoop factory, and a large dry kiln erected by the McEachren Heating & Ventilating Co., of Galt, than whom Mr. Murphy considers there are no more capable men in their line. With the aid of this kiln he is enabled to turn out staves and heading to order from the stump to the car in two weeks time, recognizing that it is promptness and superior goods that count in building up a trade to-day.

MR. J. E. MURPHY.



MILLS OF J. E. MURPHY AT MURPHY, TOWNSHIP OF KEPPELL, ONT.

The cutting capacity of each saw mill is about 12,000 feet per day; shingle mill, 12,000 cedar shingles; hoop mill, 7,000 per day; stave factory, 20,000 staves per day. The average amount of lumber turned over per year for the past 16 years has been 4,000,000 feet, the greater part of which has been hemlock, and the balance ash, birch, elm, basswood, maple and other minor hardwoods.

Although the largest portion of Mr. Murphy's business is at the Keppell mills, he still continues to reside at Hepworth, where he holds considerable farming lands, as well as a smaller mill that he has operated there for the past sixteen years. The timber is now pretty well cut away within several miles of this mill, and it is his present intention to either sell the mill, or after cutting one more stock, move to some location yet to be selected, where timber is more plentiful. Mr. Murphy is also interested in the Owen Sound Portland Cement Works at Shallow Lake, near Owen Sound.

## WHAT CONSTITUTES A MANUFACTURED ARTICLE.

The United States Supreme Court at Washington has handed down a decision, through Justice Brown, in the case of the Tidewater Oil Company against the United States. The case was instituted to secure a drawback of duty on shooks, sides and bottoms of boxes, and involved the question of what constitutes a manufactured article. The Tidewater Company habitually imported shooks, sides and bottoms of boxes from Canada, which they manufactured into boxes, together with iron rods which they imported from Europe. The completed articles they then exported. Justice Brown decided the question, whether the boxes were wholly manufactured in the United States, in the negative. He held that the sawing of the shooks was an important part of the manufacturing process, and as this was done previous to their introduction into the United States, the boxes could not be said to be wholly manufactured within the United States.

The employees of Ross Bros. and the McLaren Company at Buckingham, Que., recently requested a reduction in the working hours of from 11 to 10 hours, which was granted.

## OBITUARY.

### S. C. KANADY.

WITHIN the past month death has removed a well known Canadian lumber dealer, in the person of Mr. S. C. Kanady, who died in Toronto on Wednesday, June 8th. Deceased had suffered for years from bronchial affection, which it was thought would have proved fatal ere this, and it was only by careful nursing and the best of attention that his life was prolonged.

Mr. Kanady was a thorough lumberman, with an equal knowledge of both pine and hardwoods, obtained during a business career of nearly fifty years. He was associated and familiar with early lumbering operations in Ontario, when the trade was manifestly different from that of today. Of a life of sixty-two years, forty-four were spent in the handling of lumber, a calling which he chose when first launching into the commercial world. He had naturally a very wide acquaintance among lumbermen and throughout the Eastern States.

The late Mr. Kanady was an American by birth, although most of his life was spent in Canada. He was born at Evans Mills, New York State, and when a child removed with his father to Ontario, settling at Vienna, in Elgin county. At the early age of eighteen years he eetablished himself as a lumber dealer, and in a very short time became quite an extensive shipper, supplying large quantities of pine lumber to Easton & Co., of Albany, N.Y. After residing at Vienna for several years, he removed to Detroit, but still cotinued his Canadian business.

Returning again to Ontario, Mr. Kanady located in Toronto, and formed a partnership with Messrs. A. R. Christie and Wm. Kerr under the firm name of S. C. Kanady & Co. This was about twenty-five years ago. For a number of years a very extensive and successful pine trade, both local and export, was done by this firm, and they were recognized as the leading wholesalers. Subsequently, however, largely owing to general commercial depression, they met

THE LATE S. C. KANADY.

with business reversals and became financially involved, the outcome of which was that the partnership was closed out. Then for a short time Mr. Kanady continued alone, but early in the eighties he arranged a partnership with Mr. Ashley R. Ritchies under the former name of S. C. Kanady & Co., which continued until about seven years ago. Of late years Mr. Kanady has confined his business largely to the handling of hardwoods, having an office at his residence on Charles street, Toronto.

Although retiring in his disposition, Mr. Kanady was much respected and had many warm friends. He was a man upright in all his ways, of a sympathetic nature, and always willing to assist those in need. In his death the lumber trade lose an esteemed member.

### WALTER MCFARLANE.

ON May 13th last death claimed as its victim Mr. Walter McFarlane, of St. Marys, N. B. Deceased had been ill for about a month, but had recovered sufficiently to be able to attend to business, and had every appearance of regaining his former robust health. He was, however, again taken suddenly ill, and expired in a few hours.

The late Mr. McFarlane was one of the most successful manufacturers of the Maritime Provinces, and was held in high esteem in the community in which he lived. He was of Scotch descent, having been born in Dunoon, Scotland, in the year 1843. He removed to Canada with his parents when fourteen years of age, and settled with them at Nashwaaksis, N. B., where he learned his trade as a blacksmith. After completing his apprenticeship he removed to Boston,

THE LATE WALTER MCFARLANE.

where he entered the employ of a street car company. Upon his return to St. Marys, he entered into partnership with Mr. Frank Bird, now of Burtt's Corner, and purchased a small blacksmith business at St. Marys. Mr. Bird retired from the firm at the expiration of one year, and Mr. McFarlane continued the business, which, under his judicious management, flourished, and has since developed into one of the most important and successful industrial establishments in York county. Shortly after Mr. Bird's retirement, the surviving partner dropped the carriage and general blacksmith business and took up the manufacture of horse hames, peevies and patent hay lifting machines. Mr. McFarlane's success as a manufacturer of these articles was phenomenal, and demands for his goods came from all parts of the country, from Cape Breton to Vancouver. His factory was destroyed by fire in 1882, but was immediately rebuilt of brick and stone on a somewhat larger scale, to meet the demands of his rapidly growing business. The present large establishment occupies substantially the same site as the small wooden structure in which he commenced business over thirty years ago. In addition to his manufacturing business, Mr. McFarlane controlled and operated a large coal mine at Grand Lake, Queens county, and was also interested in the St. Marys Soap Factory. His estate is valued at $50,000.

### ROBERT SWIM.

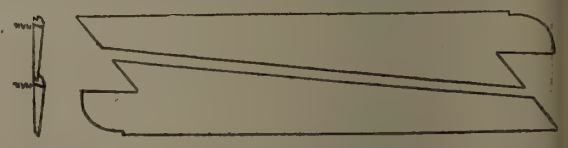
HEREWITH is presented a portrait of the late Robert Swim, of Doaktown, N.B., to whose death reference was made in a former issue.

THE LATE ROBERT SWIM.

Mr. Swim was an extensive lumberman on the south-west branch of the Miramichi river and tributaries from 1870 to 1893, when he sold out his lumber business, timber lands, stores and saw mill to Swim & Co., consisting of F. D. Swim, Alonzo Kelly and Henry Swim. He became the second largest stockholder in the South-west Boom Co., which position he retained until his death. After selling out his lumbering business in 1893, he built a wood-working factory and connected with it a carding mill, which he owned and operated also.

## A MARKETABLE CLAPBOARD.

Messrs. Macpherson & Schell, of Alexandria, Ont., send to the Woodworker the accompanyiny sketch of a clapboard they have been making for the past 28 years, regarding which they say:



"There is no patent on it in Canada, and if there should be any such patent taken out it would be of no value. One and one-quarter inch lumber is used for the wider widths, and for four-inch wide full inch lumber is used. The edge of the clapboard may be made ogee, quarter-round, or as the maker prefers. A four-sided planer or sticker and a resaw are used to make it."

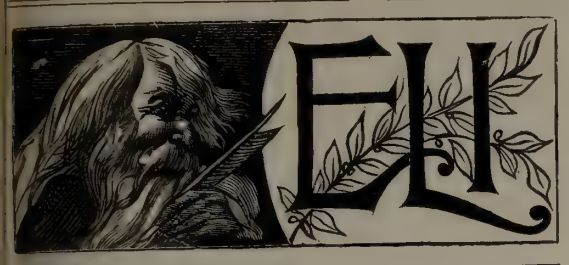
## TESTS OF "NEW AMERICAN" TURBINE.

Messrs. Wm. Kennedy & Sons, Limited, of Owen Sound, Ont., manufacturers of the "New American" turbine in Canada, have handed us a condensed table of the tests of a 36 inch "New American" wheel made at Holyoke testing flume on the 27th and 28th May last, which show the following remarkable results:

| | | | | | |
|---|---|---|---|---|---|
| At 53% | of full | discharge | it developed | 72.36% | efficiency. |
| " 64% | " | " | " | 77.95% | " |
| " 79% | " | " | " | 84.35% | " |
| " 84% | " | " | " | 85.89% | " |
| " 86% | " | " | " | 86.36% | " |
| " 93% | " | " | " | 85.81% | " |
| " 100% | " | " | " | 83.09% | " |

Aver. efficiency from half to full gate = 82.86%
Power developed by wheel under 16.72′ head = 180.90 h. p.

Intending purchasers of water wheels will do well to investigate the merits of this wheel.



WHEN in Ottawa recently it was my privilege to meet Mr. G. B. Perley, the only surviving member of the once prominent Ottawa valley lumber firm of Perley & Pattee. Mr. Perley had just returned from Mexico, and although in his 75th year, showed no signs of being fatigued by his six days' journey on the train. He takes pardonable pride in referring to the early lumbering operations on the Ottawa, with which he is thoroughly acquainted, and relates many an interesting anecdote relative thereto. "For forty years," said Mr. Perley, "our company operated at the Chaudiere, cutting from sixty to seventy-five million feet annually. The river, in the early days, was known as the Grand, and the city of Ottawa as By-town. The first water-power mill on the Chaudiere was built by Levi Young; then came the Bronsons, W. H. Baldwin, and J. R. Booth. The Gilmours at Chelsea and the Hamiltons at Hawkesbury were among the first to export to the British and South American markets. Owing to the death of the other members of our firm, the business ceased about three years ago, when the old Perley & Pattee mill was sold to J. R. Booth, who had previously lost one of his mills by fire. Since that time my attention has been engaged in winding up the affairs of the estate." Mr. Perley's thoughts again reverted to the fifties. "I remember well," he said, "how an employee of the Hamiltons, of Hawkesbury, told of being sent away up the Grand River as shanty clerk to a place called Hull. There, he said, was where we had our shanties. This early shanty site is now surrounded by some of the greatest sawmilling industries in the world."

* * *

A GENTLEMAN conversant with European trade, and one who holds strong views as to how the most can be accomplished for the Canadian lumber industry, recently took occasion to comment on the apparent indifference of the Canadian government to the interests of the lumbermen. In his opinion, it is the duty of the government to appoint a thoroughly practical lumberman to visit the European markets and report fully as to the openings for and methods of securing trade—something more in detail than is furnished by the commercial agents. Some of his views concerning the hardwood trade I will give to my readers, who may find therein food for reflection. "Until the manufacturer and the consumer are brought closer together," remarked this gentleman, "the hardwood trade will enjoy very little prosperity. There is no denying the fact that closer relations between producers and consumers is the tendency of the times. At the present time hardwoods are not taken out in sufficiently large quantities to enable manufacturers to put in the proper machinery for sawing the lumber in the manner required by the European markets, and I look for no improvement so long as the business remains in the hands of small mill men. The hardwood trade should be taken up by a few large dealers, who would be in a position, financially, to handle large contracts. To explain, I recently saw an order that was given to an American firm for 125 car loads of oak and ash. Now, where is there a hardwood firm in Canada that could fill an order such as that?" This question suggested an enquiry as to the extent of our hardwoods, to which my informant replied: "I believe we have sufficient hardwoods to supply fifty per cent. of the British trade. The reason that the local consumption requires nearly all the hardwoods produced is that there is no incentive to manufacture; you must create a market. Our hardwoods are now sold on too small a margin of profit; they are really sacrificed. Of course, you know that one drawback in the past has been that you could not drive hardwood logs, but with the new railways recently completed in different parts of the province there can be obtained immense quantities of hardwoods, and it is quite time that we took advantage of our opportunities. Taking a broader view of the question, and looking at it from a national standpoint, I think the cultivation of the hardwood industry is very desirable. On many so-called pine limits will be found considerable hardwood. Instead of cutting the latter, the tendency of lumbermen in the past has been to confine operations exclusively to pine, even cutting the very small trees. Thus the pine market has been almost ruined, while the country is being rapidly depleted of its forests. It seems to me that the protection of pine is the cultivation of hardwoods, and when this is properly recognized we will enter upon a new era in the lumber trade of Canada. There is a wonderful market in in Europe for forest products."

## DISPOSAL OF REFUSE AT HAMBURG, GERMANY.

IN view of the increased attention which is now being given by lumbermen to the question of the profitable disposal of sawdust and other mill refuse, Mr. W. M. Watson, of Toronto, sends us the following condensed report of the system employed at Hamburg, Germany, for the utilization of the garbage of the city. The particulars are obtained from a report recently issued by Mr. Herr F. Andreas Meyer, City Engineer.

The city of Hamburg, Germany, with its population of 300,000 inhabitants, has an incinerator, comprising 36 furnaces, to destroy the offal, garbage, street and marine refuse, and everything useless and infectious that may set up putrefaction. The destructor has been in operation since 1895. Herr Meyer informs us that the garbage and refuse of Hamburg is composed of market, dock and domestic garbage, sweepings from paved streets and slaughter houses, spoiled fish, etc., but that, on account of the small amount of cinders and coal ashes collected in Hamburg, in comparison to what is collected in British towns, and of the custom in Hamburg of covering the floors of the poorer dwellings, kitchens, yards and other flagged walks with sand, which when dirty is swept up and deposited in the garbage bin and comes to the incinerators, the combined refuse is hard to cremate, because the sand proves a detriment, and there is not the cinder fuel usual in the British refuse to create the heat to destroy wet rubbish.

The 36 furnaces, having 27½ square feet of grate surface, are erected in two rows of 18 each, placed back to back, with the large collecting and combustion chamber between them. The furnaces were built by the Horsfall Syndicate of Leeds, England, who guaranteed that each furnace should consume 11,000 pounds of wet refuse or garbage each day, and the fumes, if any, discharged from the chimney should be odorless and totally free from unhealthy vapors, dust, etc. Six furnaces were first erected, and tested in 1894. They were found to be fully up to the guarantee, and the order was then given for the balance of 30 more, making the full complement of 36, which were finished in 1895 and have been working steadily ever since.

The garbage is collected by wagons that hold five cubic yards, and on arrival at the works are run on to an electric elevator and hoisted up to the tipping platform, then shovelled by hand on to the drying hearth, which is built with a steep incline at the rear of each furnace grate, where all the moisture is dried out, and driven by the blower through a trumpet pipe and along the patented iron box fixed on each side of the fire, delivered at a proper pressure into the ash-pipe, and then upwards through the body of the fire, which generates it into heating gas and completely destroys the fumes. The smoke and firey gases from the fire are brought to the front over the cleaning door, and pass through the crown arch to a combustion chamber of the same size as the fire-place; from this chamber it passes on to the general collecting chamber, and then to the steam boilers, and gives heat sufficient to create steam to propell all the machinery about the place, including the dynamos for 76 lights, clinker crushers, hoists, etc., and it is said there is still an excess of heat from the burnt garbage sufficient to generate 100 horse power of steam. The forced draught is created by centrifugal blowers, and steam can be used when necessary, according to the amount of moisture that is to be extracted from the material treated. The chimney draught is ½" and the forced draught 1¼" water column.

The furnaces employ 18 men for each shift of 8 hours, or 54 men in all. One man charges the drying hearth of six furnaces once every 90 minutes, and one man keeps each set of three furnaces clean. Arrangements are provided so that any six of the 36 furnaces can be stopped and cooled off for repairs. No Sunday work is allowed. All the fires are banked up at midnight on Saturday and started at midnight on Sunday, and to get the brickwork of the combustion chambers to a fierce white heat again, or to the temperature that they were when all was closed down on Saturday midnight, about 1,300 pounds of small coal is used.

The works cover 3½ acres of ground in the centre of the town, together with the disinfecting building, close to the wharf and easy of access from all the main roads and waterways. They are perfectly free from any nuisance, dust or hot gases. The residum is screened and sold by the load, and, besides, 220,000 pounds of scrap metal was collected from the rubbish in a year, which sold for about $200. The dust from the flues is found to be valuable in the manufacturing of artificial stone ornaments.

Lately the sweepings of paved streets have all been sold for manure, for which there is a good demand and price, and owing to the wet atmosphere of Hamburg, the sweepings are often very sloppy, and when burned had to be mixed with dry material to make it suitable to handle and rest on the drying hearths. The income from the sales goes a long way towards paying the expenses of management.

This kind of incinerator, or destructor—as it is called in England—is very applicable to this country, as it would turn any wet refuses from saw mills or tanneries to profitable account, by raising steam that might be used for manufacturing, for electric lighting, pumping or heating. A set of three furnaces will give heat sufficient, without the assistance of coal or other fuel, for one boiler, and when erected all complete, with boiler and first-class brickwork, iron work, and handy appliances for easy working the furnaces, the cost will be about $14,000, not including the cost of chimney or the roads leading to the furnaces.

## HINTS ON BELT DRIVING.

By "MILLMAN," in Woodworker.

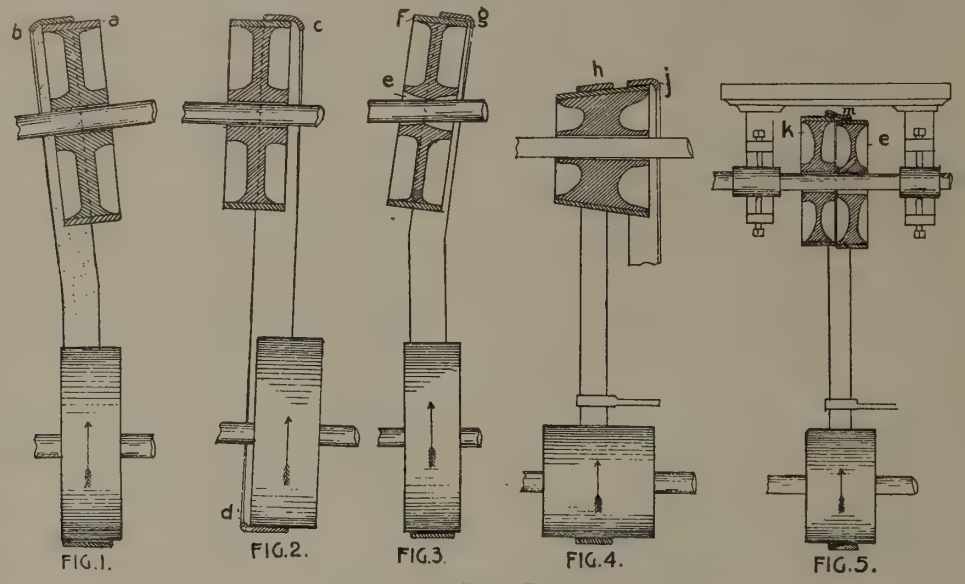
CROWNED pulleys are usually employed where the nature of the drive is such that the belt is liable to run to one side or slip off. The centrifugal force keeps the belt on the crown of the convex rims of the pulleys. This tendency of a belt to hug that part of a pulley where the diameter of the rim is the greatest, has often been misleading. From it came the "high side" theory; and there are many good mechanics who suppose that the only thing needed to keep a belt on the pulleys is a "high side" as a "leader."

Suppose that one edge of the pulley in Fig. 1 is elevated by raising the shaft on that side. A high side is produced at a, and according to the "high side" idea the belt should go there. Instead, the belt goes to b, where it hangs over the edge. This relieves the tension on the outer edge of the belt, while the tension on the inner edge remains. The belt conforms to these conditions and will run in the new plane of rotation indefinitely, but of course can not give good service, as part of the belt is off one of the pulleys. The example is given to show that there are some kinds of "high sides" that repulse belts.

The fact that some belts run like this in their regular work is usually due to the shafts being out of line, pulleys set untrue, rims beveled, etc. In Fig. 2 is an illustration of how belts are sometimes run, due to the shafts of both pulleys being out of parallel. The belt curls over at c on one pulley and at d on the other. This action is disastrous to a belt, and power is lost through slipping. The belt will not, however, slip off, unless other than the regular conditions come in, for the running requirements are filled. Shifting the pulleys on the shafts will not prevent the evil. The shafts must be adjusted parallel, the pulleys examined to see if true, hanger supports set up level, and the whole drive put into proper order.

In Fig. 3 is a pulley worn hour-glass shape in its hub, as shown at e. The belt does not run on the higher side, at f, but goes to g, where it hangs, and goes no further, unless conditions cause it to slip off entirely. The remedy for this type of trouble with loose pulleys consists in boring the hub evenly and putting in a shell, or the hub may be babbited.

Fig. 4 shows a belt on a cone pulley. The difficulties that usually arise with combinations of this description are due to the use of common belts. Belt h hugs the cone more on the side under which the diameter is the greatest. If no guides or belt shippers interfere, the tendency will be for the belt to keep moving towards that part of the cone where the diameter is the greatest. When the belt finally gets to the edge it will hang over, as at i. The shape of the cone having stretched the belt more at this side, which is now hanging over, the tensions are about even and the belt will continue to run in the position shown for some time. Belting which is so made as to sustain an even tension on both edges on a tapered surface overcomes the trouble.

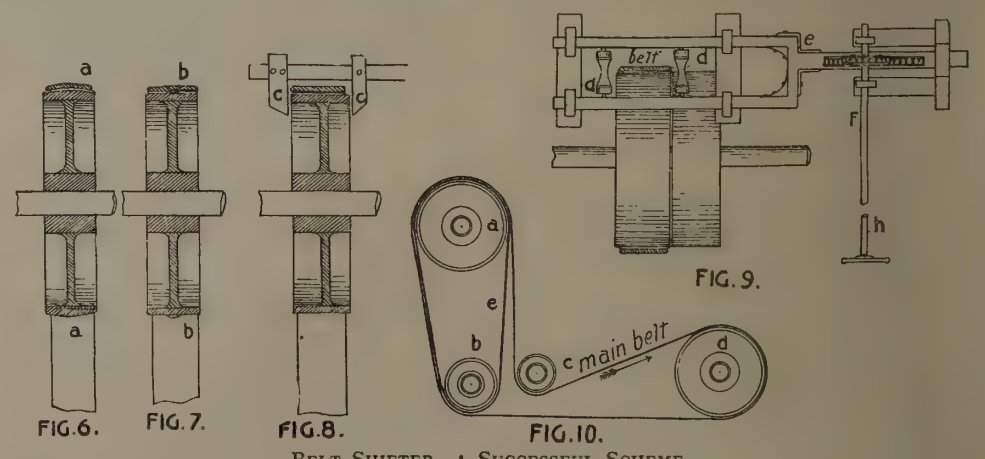


HINTS ON BELT DRIVING.

Fig 5 shows tight pulley k and loose pulley l, the hub of the latter worn, which allows the rim to drop below the level of the fast pulley, producing a high edge, which under ordinary circumstances attracts the belt, as at m. This should be fixed immediately, as not only a part of the driving power of the belt is lost, but the belt itself is unnecessarily worn by being shifted across the uneven surface. A new loose pulley, or a rebabbiting of the bearing of the old pulley, will remedy the trouble.

As stated at the beginning of this article, the proper type of "high side" is that produced by convexing the rim of the pulley, as shown at a, Fig. 6. The centrifugal force causes the belt to hug the crown. This is often accomplished by riveting a leather lag around a flat rim pulley, as at b, Fig. 7. Again, we find the sides of a pulley rim provided with guides—c c, Fig. 8. The belt rubs against these, and although it may not always keep in the centre, it cannot run off. Another and more mechanical method for both keeping the belt in the right place, and for shifting it from a fast to a loose pulley, and vice versa, is shown in Fig. 9. A wood or iron frame (e) is provided with two rollers (d d), set as shown, and just far enough apart to receive the belt. The frame is put in slides and the latter are fastened to supports. The shaft (f) has a little cog wheel keyed to its top end, which wheel engages with a row of cogs screwed to the shaft of the frame. The lower end of rod f is provided with a turning wheel (h), this being near the floor, so that it can be worked. Thus to shift the belt from one pulley to the other requires only the turning of this wheel.

In Fig. 10 is a scheme worked successfully by the writer on a belt system in which the main belt could not be made to keep well on the center of the several wheels. The belt passed over a, a 20-inch diameter wheel, under c, a 7-inch wheel, around d, a 20-inch wheel, beneath b, a 12-inch wheel, then to a again, a being the driver. After much trouble with this system, an additional belt (e) was put around a and b. This overcame the slipping of the main belt and has given satisfaction, for now both belts keep on the center of the wheels.



BELT SHIFTER—A SUCCESSFUL SCHEME.

## ELECTRICALLY-TRANSMITTED POWER.

H. B. WALDA & BROS., Ft. Wayne, Ind., have a wood-working shop with combination saw, shaper, scroll saw and lathes, run by a 12-horse power electric motor. Mr. Walda says: "We had an engine and boiler that cost about $12 a month for fuel. Some days we wanted power for a few minutes only, so we put in a motor and now find we have the advantage of having power at any time at a second's notice. The shafting is lighter and pulleys very much smaller, as the shaft runs over 500. The speed is even and there is a great saving in oil and care, at a cost of less than $12 a month. When not running there is no expense; when running the expense varies exactly with the work. If we are sawing, the meter registers accordingly; if a knot is sawn through, it takes more power, exactly as an engine would use more steam." Mr. Walda is a firm believer in electrically-transmitted power, especially for small wood-working concerns in places where there are electric power plants.

The Tracadie Lumber Co. have recently put in operation their new mill at Tracadie, N.B., which is equipped with band saws instead of the usual gangs. One band saw and three clapboard machines are in operation, and the daily cut will be from fifty to sixty thousand feet. Modern labor-saving devices are included in the equipment.

## REPORTS FROM FOREIGN MARKETS.

Below will be found particulars of foreign markets obtained from late reports of commercial and special agents of the Dominion government. It will be observed that reference is made to some openings for trade in manufacturers of lumber and woodenware.

ARGENTINE REPUBLIC.

Mr. R. M. Rennie, Buenos Ayres, under date of March 11th, 1898, says: "During the two months thirty-seven cargoes arrived at this port. These may be divided as follows:—Twelve spruce, ten white and fifteen pitch pine. Of these five were from Canadian ports, and it is probable that two-thirds of the twenty-two cargoes of spruce and white pine was of Canadian cut. Some spruce from Philadelphia is reported to have been of extra high class. The duty, as per tariff, may lead shippers astray. There is an additional two per cent on all except free goods. The duty on spruce, white and pitch pine figures out $5.75 gold per 100 square metres or $5.35 per M feet (1,000 feet = 92.90 square metres). The market is active, nearly all cargoes being sold to arrive and deliver direct to consumers."

AUSTRALIA.

Mr. J. S. Larke, Sydney, Aus., writes on March 26th as follows: "I have inquiries for oars, ash and spruce. There is a market for several thousand pairs at the right price in the colonies. The dearth of shipping is advancing the price of lumber in the colonies, and good orders could be taken if there was an assurance that charters were available.

Pacific coast lumber is firm and advancing in price. United States exporters have found some ships, as cargoes have been contracted for at advanced figures, and some of these exporters have offered to consign cargoes, as they say they are assured prices will still go up. I have heard of only one Canadian firm that has expressed its ability to find shipping.

DOORS.—I have an inquiry respecting the trade done in doors in this colony. If Canadian manufacturers can meet the price, this is an unusually favorable moment for getting into the market. In 1896 there were imported into New South Wales, nearly all into Sydney, 34,511 doors. Of this number 31,951 came from San Francisco. Tney are made from the sugar pine of California, have flat panels, and are known in the trade as double moulded. Other patterns could no doubt be introduced, but the trade should be begun with the pattern commonly sold. The following is a list of the sizes ordinarily sold, with the cash price as ships' slings of a parcel sold last week:—

6 - 6 x 2 - 6 x 1¼ .....6s.—7d. each
6—6 x 2—6 x 1½ .....7s.—4d. "
6—8 x 2—8 x 1¼ .....7s.—4d. "
6—8 x 2—8 x 1½ .....7s.—11d. to 8s. each.
7—8 x 2—8 x 1⅞ .....9s.—8d. each
6—10 x 2 - 10 x 1½ .....8s.—10d. to 9s.—2d.
6—10 x 2—10 x 1¾ .....10s.—10d. each.
7 x 3 x 1½ .....11s.—2d. "
7 x 3 x 1¾ .....12s.—8d. "

A commission to the agent would be paid from this price. As freight would be an important item of the laid down cost it would have to be most carefully looked into by the Eastern Canada manufacturer, and it would probably be found that the cheapest route would be by sailing vessels from New York. The trade is very conservative, and so far the attempt to introduce cedar doors from British Columbia has failed. There would not be the same difficulty with white pine, as it once was largely sold and is known to the trade. The Californian door trade has been secured by one firm and hence others who formerly shared in it would be glad to have an opportunity to introduce other goods into the market. The great obstacle is the price. It is not likely to get lower for some time.

FREIGHTS.—The importance of strictly inquiring into the best freight routes and getting the best rates will be of greater importance this year than last. The cheapest rate but longest time has been via sailing vessel from New York. To the beginning of the year the business was wholly in the hands of the four firms, who fixed a common rate, which for ordinary goods to Sydney has been eighteen cents per cubic foot, with five per cent primage. A fifth firm has now entered the field, and as it has received strong support from Australian firms it is likely to succeed. Rates have already fallen, as low as twenty cents having been reported. A difference of fifty per cent in freight charges is a matter of great importance and should be taken advantage of. It is largely the paying attention to the details of the business, freight rates, proper transmission of bills of lading and invoices that will determine whether an export will be done at a profit or a loss.

GREAT BRITAIN.

In a letter to the commercial agent at Glasgow, Messrs. Allison, Cousland & Co., Glasgow, Scotland, say: "The trade in lumber and deals with Canada for 1897 continued to expand. The import shows an increase, but although the consumption of deals and boards continues to grow (at the expense of the timber in the log, which is rapidly being displaced), shippers have sent them forward too freely, with the result that prices have given way, and stocks are heavy at the present time. Deals of three inches or thicker have been taken up to much the same extent as formerly, but lumber shows a large increase both in imports and consumption. In regard to the quality of pine lumber, we may state that only first and second grades have been sold freely, the lower grades, shipping culls, &c., not yet having recommended themselves to our comment."

Messrs. Graham, Roxburgh and McLauchlan, Glasgow, write: "In Canadian goods, while the imports in 1897 were large, the demand was steady and prices have continued fairly firm on the whole. In log timber, white pine, red pine and elm have well maintained their values, but the tendency has been rather a drooping one in birch and ash, partly no doubt owing to heavy arrivals, but in the case of birch, more owing to the cheapness of plank imported from New Brunswick and Nova Scotia, and in the case of ash, owing to other cheaper woods taking its place. In lumber of all kinds a very large business has been done this year, and pine of all descriptions—with the exception, perhaps, of fourth quality, which has been imported rather freely—has met with steady demand at firm prices."

MAPLE ROLLERS.—The curator of the Canadian section of the Imperial Institute, referring to maple rollers, says; "In consequence of an inquiry received from the province of Quebec, I made inquiries as to the extent to which hard maple rollers are used by British manufacturers for the purpose of printing wall paper. I understand that a very considerable number is used in Uuited States wall paper factories. Information was readily supplied by several houses which supply the manufacturers, but it would appear that the demand in the United Kingdom is very much less than that which exists in America. However, there are a few dealers who purchase about 1,000 of these from time to time. It appears that these rolls are generally two feet two inches long and the diameter from five and a half inches upwards. Detailed information, with current prices, was furnished to my original correspondent, and to several others. The dealers asked for samples and were quite willing to receive Canadian quotations when next purchasing. Letters have already passed between them and possible purchasers. At the same time I may mention that there is a very large demand for almost similar rollers by washing machine manufacturers. A portion of this is already supplied by Ontario houses, but American competition is very keen, and the larger share of the trade is done by the United States."

SHOE LASTS.—Inquiries regarding the possibility of obtaining a portion of the British trade for shoe lasts show the outlook to be rather unfavorable, the trade now being held almost exclusively by Germany and the United States.

JOINERY.—"The High Commissioner for Canada in his annual report, thus refers to joinery: "A considerable trade is also being built up in joinery work, such as sashes and doors. I am informed that the excellent quality of Canadian made joinery enables it to compete in very favorable conditions with the large importation from Sweden. The Canadian trade is not much hampered by the Swedish goods, which are admittedly of a lower grade than Canadian. The importation from the United States, however, have had an effect upon the Canadian trade. The quality does not reach the Canadian standard, but the goods were sold at prices which render it difficult for the Canadian manufacturer to compete against them, even when the difference in quality is taken into account. It is believed that the American articles have been sold rather under cost price, or at very small profits, in order to create a market. It is not likely that this will continue, and it is generally expected in the trade that Canada may recover the practical monopoly of the American imported joinery market which she enjoyed some years ago."

---

One of the first shipments of pulp from Harvey's pulp mill at Black River, Newfoundland, has just been made. It was put up in bundles weighing about 200 pounds each.

## SPOOL WOOD TABLE.

MR. R. A. Johnston, of Bay City, Mich., sends us the accompanying spool wood table for white birch, concerning which he says: "All spool lumber must be plump to gauge when thoroughly seasoned, with the sides straight and parallel. Sticks cut tapering or even $\frac{1}{32}$ scant cause much waste and annoyance. Those having large knots, wane or other defects may be cut off when two or three feet of sound can be left, reckoned one-half or three-quarter bundles, observing, of course, that they contain the same number of pieces as the 4 foot lengths. Red heart, punkey or discolored stock will not be received. Always put the exact number of sticks of the same size into a bundle and tie with strong string carefully and securely.

TABLE FOR SPOOL WOOD.

| No. of sticks in bundle of whatever length. | Green size. Inches sq. | Dry size. Inches sq. | No. of feet in bundle, 4 feet long. |
|---|---|---|---|
| 120 | $\frac{9}{16}$ | ½ | 10 |
| 76 | $\frac{11}{16}$ | ⅝ | 10 |
| 53 | $\frac{13}{16}$ | ¾ | 10 |
| 45 | ⅞ | $\frac{15}{16}$ | 10 |
| 38 | $\frac{15}{16}$ | ⅞ | 10 |
| 34 | 1 | $\frac{15}{16}$ | 10 |
| 30 | $1\frac{1}{16}$ | 1 | 10 |
| 27 | $1\frac{6}{32}$ | $1\frac{1}{16}$ | 10 |
| 24 | $1\frac{7}{32}$ | 1⅛ | 10 |
| 22 | $1\frac{9}{32}$ | $1\frac{8}{16}$ | $10\frac{1}{3}$ |
| 20 | $1\frac{11}{32}$ | 1¼ | $10\frac{5}{12}$ |
| 18 | $1\frac{13}{32}$ | $1\frac{5}{16}$ | $10\frac{1}{3}$ |
| 16 | $1\frac{15}{32}$ | 1⅜ | $10\frac{1}{12}$ |
| 15 | $1\frac{9}{16}$ | $1\frac{7}{16}$ | $10\frac{1}{3}$ |
| 12 | $1\frac{5}{8}$ | 1½ | 9 |
| 12 | $1\frac{11}{16}$ | $1\frac{9}{16}$ | 9¾ |
| 12 | 1¾ | 1⅝ | $10\frac{9}{16}$ |
| 10 | $1\frac{13}{16}$ | $1\frac{11}{16}$ | 9½ |
| 10 | 1⅞ | 1¾ | $10\frac{1}{8}$ |
| 9 | $1\frac{15}{16}$ | $1\frac{13}{16}$ | $9\frac{5}{6}$ |
| 8 | $2\frac{1}{32}$ | 1⅞ | 9⅜ |
| 8 | $2\frac{3}{32}$ | $1\frac{15}{16}$ | 10 |
| 8 | $2\frac{5}{32}$ | 2 | $10\frac{2}{3}$ |
| 7 | $2\frac{7}{32}$ | $2\frac{1}{16}$ | 10 |
| 7 | $2\frac{9}{32}$ | 2⅛ | 10½ |

# CORRESPONDENCE

Letters are invited from our readers on matters of practical and timely interest to the lumber trades. To secure insertion all communications must be accompanied with name and address of writer, not necessarily for publication. The publisher will not hold himself responsible for opinions of correspondents.

## TRADE OPENINGS IN THE BRITISH MARKET.

TORONTO, June 10, 1898.

Editor CANADA LUMBERMAN:

SIR,—The manufacture of various lines of wood goods has developed very materially in Ontario during the past few years, but there is still room for expansion, and the British market is ready to absorb large quantities of many lines of goods if our manufacturers put themselves in position to supply the kinds needed at prices low enough to meet competition from the United States. Already several new lines of goods have been placed on the market and I believe with success. At Owen Sound is a mill turning out large quantities of butchers' wooden "skewers," and at Parry Sound a well equipped mill is making "cloth boards" for the British market under a patent process. Our foreigh trade in furniture is increasing, and efforts are being made to meet the low prices in Excelsior, shoe lasts and other lines.

There would seem to be a very large demand in Great Britain for wooden handles of various kinds, and lately there have been inquiries for broom handles in quantities. The Bureau of Forestry is advised that the following firms are prepared to do business with Canadian houses making broom handles:

Alfred Field & Co., Edmund street, Birmingham; T. G. Rollins & Co., Ltd., Old Swan Wharf, London Bridge, E.C.; Messrs. Market & Co., 725 Shoe Lane, Holborn Circus, London, E.C.

The sizes required seem to be 50 in. × 1¼, 50 × 1⅛, 60 × 1¼, 66 × 1⅝, 72 × 1¼ and 72 × 1⅝. These are made in basswood, ash and maple.

Mr. Watson, Canadian Curator of the Imperial Institute, writes that the present supply of these goods comes largely from the United States. The prices are low, but these firms or any of them would be prepared to take the whole output of a factory.

The firm of Baker & James, 164 Corporation street, Birmingham, are also desirous of receiving quotations for what they call "birch squares," square sticks of birch, ranging from 2 to 6 feet long and one-half inch to three inches square. I do not at present know what these are used for, but they are prepared to buy large quantities.

Trusting that some of your readers may be able to supply these goods, I remain

Yours truly,
THOMAS SOUTHWORTH,
Clerk of Forestry for Ontario.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

C. H. MORTIMER
PUBLISHER

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## THE SITUATION AS TO LOGS AND LUMBER.

PRELIMINARY arrangements are well under way for a conference of commissioners representing the governments of the United States and Canada, to be held in the city of Quebec on July 15th next. The purpose of this conference is to discuss the differences which now exist between the two countries, and while no announcement has been made that the trade relations will be included in the subject of negotiations, it is only reasonable to expect that this will be the case. The question of export and import duties on logs and lumber will ceertainly force itself upon the commissioners for consideration, and therefore a brief review of the situation may be timely.

By an Act passed at the last session of the Ontario Legislature, all timber cut on Crown lands after April 30th, 1898, must be manufactured within the province. Thus Michigan mills sawing on Canadian logs will be compelled to close down after the present season unless some new arrangement for a log supply can be made. There is no possibility of obtaining this supply from elsewhere than Ontario, hence the strongest efforts of the Michigan mill owners and their friends will be devoted to influencing the United States government to give such concessions as will provide for securing a supply of timber from the Georgian Bay to keep their mills in operation, thus preventing the almost total destruction of much valuable mill property and the settlements in which the mills are located. In the hope of obtaining free logs, the Michigan interests will demand that a reduction of the import duty on lumber from two dollars to one dollar be made.

Supporters of the present two dollar duty on lumber have proclaimed aloud that the bill passed by the Ontario Legislature restricting the manufacture of timber to the province would be disallowed by the Dominion Government, but this argument is very short-sighted, inasmuch as the bill itself provides that the Lieutenant-Governor may pass an order-in-council imposing additional regulations to carry into effect the intent of the bill. Nothing more than the passing of an order-in-council would be necessary, and this, while producing the same results, would not require the consent of the Dominion government.

Throughout the New England states and New York the sentiment is strongly in favor of free lumber. The position is simply that the manufacturing industries that have used white pine as their raw material fear the loss of their trade owing to competition from southern pine, unless they are allowed to buy in the Canadian market, while from the same motive wholesale dealers are in favor of free lumber. But the greatest faction in influencing the government are the consumers of the Eastern States, who are strongly opposed to any duty on lumber.

Briefly, then, the Michigan interests will fight for a reduction of the duty on lumber, while the Eastern States want free lumber. Opposed to these influences will be the lumbermen of Minnesota and Wisconsin and the Southern States, who will protest against any interference with the present duty of two dollars.

As an international question, let us now look at the situation in Ontario. The lumbermen of this province are favorable to a fair exchange of free logs for free lumber, but that they would be willing to give free logs in consideration of the lumber duty being reduced to one dollar is somewhat doubtful. It is an acknowledged fact that the bill compelling home manufacture of timber would not have been passed but for the combined action of the lumbermen of the Georgian Bay district, and the Legislature will consider very carefully before taking any action to abrogate the measure, more particularly in view of the small majority of the party in power. Public sentiment throughout the province has received an awakening in favor of building up home industries, and the government cannot afford to disregard this sentiment.

It is much to be desired that at the forthcoming conference a settlement of the question of lumber and log duties should be reached. Should this be effected, it will be in the nature of a treaty which would extend over a long term of years. Lumbermen would not then be subject to tariff changes and consequent business interruptions every three or four years, but would be in a position to arrange their plans for the future, which has been inexpedient in the past so far as United States trade is concerned.

The lumbermen of Canada feel that by the course adopted by the Ontario government they have command of the situation, and are very hopeful of an early and satisfactory settlement of the question. A meeting of the Ontario Association of Lumbermen will be held at any early date to discuss the situation, and to decide what action, if any, would be in the best interests of the trade. In the meantime, those who have not identified themselves with the association should, by becoming members, lend a helping hand to any movement that may be decided upon.

## PROFITABLE UTILIZATION OF MILL REFUSE.

LUMBERMEN in Canada have of late years given some attention to a solution of the problem of the profitable utilization of sawdust and mill refuse, but as yet no generally accepted scheme has been devised. The steps which have been taken in this direction have been prompted, in some cases, by a recognition of the wisdom of obtaining, if possible, some commercial returns from the immense quantity of mill refuse, and in others, by the necessity of removing and disposing of the material.

The most successful sawmilling establishments of to-day are those which are equipped with machinery for a wide manipulation of the timber, manufacturing it into numerous by-products. There seems to be a growing appreciation of the expediency of conducting the sawmilling business along these lines, and also of utilizing the sawdust. It is not only desirable that some practical method of disposing of this material should be found, but also that it should be employed in such a way as to bring some returns for the labor and expense involved in removing it from the mill. There have been expended in Canada, as well as in other countries, immense sums of money in the erection of conveyors and burners to consume the sawdust, but there is now reason to believe that there will be discovered, in the near future, some scientific method of utilizing it for commercial purposes.

Recently, this subject has become a very grave one in the great lumbering centre of the Ottawa valley. It will be remembered that three years ago an act was passed by the Dominion Government disallowing the dumping of sawdust into the Ottawa river. The penalty for the first offence was a fine of $20 and costs, for the second $40 and a further penalty of $10 per day for every day during which such offence was continued, and for the third a larger fine and $20 per day. At that time some of the mill-owners erected incinerators to burn the sawdust, but others made no preparation for conforming to the law, which they believed to be illegal. However, no test of the case was made, as at each session of Parliament since the law was enacted an extension for one year has been granted. Six months ago the Minister of Marine and Fisheries sent out circulars warning mill men that the law would become operative on May 1st last, and requesting them to make arrangements accordingly. The Bronson & Weston Company put in a system of carriers, and conveyed the sawdust to the

Eddy factory, where it was used for fuel. For this it was found somewhat unsatisfactory, requiring a large amount of other inflammable material to promote combustion. The largest mill on the Chaudiere continued to dump its sawdust into the river.

On June 6th last, when much speculation was being indulged in as to the course which would be adopted by the government regarding the enforcement of the law, Sir Louis Davies introduced a bill in the House of Commons extending the time to May 1st, 1899. This was subsequently passed. In introducing the bill the Minister said :

"Since the meeting of the House I have been waited upon by some of those who are largely interested in the sawmill business, and the following views were submitted to me, namely, that about a year ago they entered into negotiations with a gentlemen who thought he had discovered a process by which the sawdust could not only be consumed, but utilized, and a very important manufacture introduced into this country. They submitted statements to me regarding the construction of the apparatus for the purpose of testing the efficiency of his device. That being done, I said that after the statements I had made, I did not feel justified in introducing a bill further to extend the time, unless it was with pretty general consent. I submitted the statements to my predecessor in office, and he said that, speaking for himself, the circumstances more than justified the extension. He said that, so far as he was concerned personally, if I introduced the bill, it would have his support. I said I would further require, in order to place the matter fairly before the House, a statement of what proceedings had been taken, and of what stage the proceedings now were in relation to this alleged discovery and experiment."

Sir Louis Davies then read letters from Messrs. W. C. Edwards, M.P., and J. R. Booth, showing the progress that had been made with the scheme. These stated that the process had been demonstrated in laboratory form, and that Professor Ruttan, of McGill College, Montreal, had pronounced favorably upon it. An initial or illustrative plant was said to be in course of construction, and it was expected that six months would be sufficient to demonstrate the commercial possibilities of the scheme.

The proposed project will include the manufacture upon a large scale of calcium carbide, and the commercial and profitable utilzation of all the refuse from the Ottawa river mills. The tar and pyroligneous acid will first be extracted from the sawdust by distillation, and the remainder will be mixed with lime and subjected to a strong current of electricity. This will produce the calcium carbide used extensively in the production of acetylene gas.

Regarding the experiments made recently, Mr. Emerson, the inventor, says : "I have succeeded, after several years of laboratory work, in producing carbon in metallic state, free from any of the objectionable properties, of great density, and practically chemically pure, and converting same into calcium carbide. The raw materials from which the carbon was produced was supplied me by Mr. W. C. Edwards, from his mills at Rockland. Some of the samples ran as high as 92 per cent. in carbon, which is about ten or twenty per cent. better than the best coke."

The establishment of an industry such as is outlined above will be of wonderful benefit to the city of Ottawa and to the lumbermen of the Ottawa valley in particular. There seems reason to believe that success will be attained, and one of the greatest problems of the nineteenth century satisfactorily solved.

## EDITORIAL NOTES.

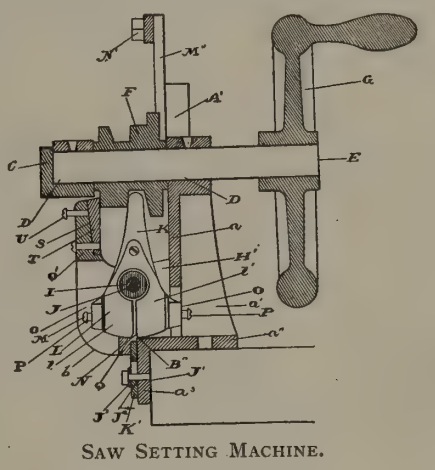
The rules for inspecting hardwood lumber adopted by the National Hardwood Lumber Association of the United States, and published in part in our June issue, are not being favorably received in all sections, and it is probable that some changes will be found necessary. The Northwestern Hardwood Lumbermen's Association and the Lumbermen's Exchange of St. Louis have each rejected the rules, while the lumbermen of Grand Rapids, Mich., have adopted rules of their own. The St. Louis association contends that the rules as adopted are too severe, but still pronounces itself in sympathy with the movement. It could scarcely be expected that difficulty would not be met with in framing rules to meet the requirements of all the markets, but there is reason to believe that ultimately success will be attained.

The lumber trade in the Ottawa valley has been somewhat disturbed of late by a strike of the employees at some of the mills. At the Rockland mills of W. C. Edwards & Co. the situation assumed the most serious aspect, over six hundred men being effected. The demands of the strikers were that the working day be reduced from eleven to ten hours, that higher wages be paid, and that they receive their wages every two weeks instead of monthly. These concessions have been in a measure granted by the company, and at time of writing the employees have returned to work, although further trouble, according to reports, would not be learned as a surprise. Without entering into a discussion of the justice or otherwise of the demands of themill hands, we must express regret that some of the strikers should have resorted to such brutal tactics to endeavor to accomplish the end in view. So long as violence and personal injury is resorted to by labor organizations, the breach between employes and employeers will surely widen.

We have recently heard some expression of indignation at the unfair treatment which is claimed to be accorded to the lumber trade by the railway companies in the matter of freight rates. It is contended that where only one line of railway reaches a certain point, thus giving the company a monopoly of the shipping trade, the freight rates are advanced considerably above the average rate. To prove the statement, it was pointed out that the Grand Trunk Railway carry the C. P. R. freight from North Bay to Toronto for $14 per car of 24,000 lbs., and six cents per 100 lbs. for excess over that amount. Therefore, on a car of lumber weighing 30,000 lbs. the freight charges would be $17.60 for a haul of 226 miles. A similar rate is given by the G. T. R. for carrying C. P. R. freight anywhere over their line in Ontario. But from Huntsville to Thedford, a distance of 250 miles, a rate of 11 cents per 160 lbs., or $33 per car of 30,000 lbs., is charged, which certainly seems an excessive figure. To cite another instance, the rate from Wiarton to Toronto, 160 miles, is 6½ cents per 100 lbs., while a rate of 10 cents is charged from Wiarton to Thedford, 155 miles. It is not to be expected that freight rates can be made uniform, as the number of changes and work of handling must be a factor in fixing the charge, but there is certainly many points in Ontario which may justly lay claim to more favorable rates. The lack of courteous treatment from the Canadian railway companies has caused some lumber dealers in Ontario to enquire into the possibility of obtaining west coast shingles from the United States instead of from British Columbia, and thus giving the carrying trade to American railways. The question is one which might well be investigated by the Lumbermen's Association of Ontario.

## PATENT FOR SAW SETTING MACHINE.

Mr. William Clark, of Galt, Ont., has been granted a patent for a saw setting machine, as illustrated herewith. The claim is for a machine embracing in its constitution a rocker arm, a die connected to the rocker arm in combination with a cam motion, arranged to actuate the rocker arm to move the die alternately in opposite directions, to set the teeth successively on alternate sides of the blade, a feed mechanism to intermittently feed the saw teeth to the setting dies, and a saw holding vise arranged to be automatically closed on the saw during the setting of the tooth, and to be automatically opened during the feed of the next successive tooth to the setting mechanism. In a saw setting machine, a feed mechanism embracing in its construction



Saw Setting Machine.

an arm pivotally connected to the frame of the machine at one side thereof, a lever pivotally connected to the frame at the opposite side of the machine, a link connecting the lever and the arm to cause their united action, a cam engaging the lever, a spring to return the lever and arm to their normal position after being actuated by the cam, a spring actuated dog pivotally connected to the arm, mechanism for regulating the length of the stroke of the arm, in combination with a setting die, a rocker arm to which is connected the setting die, a cam to actuate the rocker arm, a vise to rigidly hold the saw during the setting of the teeth, consisting of a stationary jaw, a movable jaw, a cam, the movable jaw arranged to be closed by the cam against the saw during the setting of the teeth, a spring to open the movable jaw during the feeding of the teeth to the setting dies, a vertically adjustable table to support the saw, and a vertically adjustable gauge for the saw teeth, substantially as specified.

In the saw mills of Canada many different methods re-employed for doing similar work, each one, perhaps, possessing certain points of merit. Superintendents, sawyers, filers, etc., are respectfully asked to contribute to this journal their views as to the best method of doing certain mechanical work, such as lining and setting up shafting, setting up rotary and other circular saws, rules for finding out and marking off the shape of circular saw teeth for guidance in grinding and filing.

## ANNUAL FORESTRY REPORT.

THE 1898 report of Mr. Thomas Southworth, Clerk of Forestry for Ontario, has reached our desk, and is, as usual, a valuable addition to forestry literature. At the outset, Mr. Southworth refers to the rapid strides that have been made in Ontario in late years in acquiring a knowledge of forest conditions and preservation. To-day the public are alive to the necessity of maintaining a due proportion of wooded land. The question of the reforestation of white pine is taken up at some length. Recent investigations prove conclusively that a new crop of white pine timber upon denuded lands may be secured by adequately protecting the young pine from fire and incidentally thinning out in places where it is actually needed. This is in contradiction to the theory held in earlier years.

### EXAMPLE OF FORESTRY.

A good illustration of forestry practice in the absence of trained foresters, whose skill would undoubtedly increase the production, is afforded by Mr. W. P. Greenough, of Portneuf, Quebec. In reply to an enquiry of the Bureau of Forestry, Mr. Greenough says :

"Yours of 13th asking for information concerning principles of forestry adopted by me, came duly to hand. These principles are so extremely simple as scarcely to deserve being dignified by that name. I merely aim to allow timber to be cut no faster than it grows. As I am considering only spruce, which under ordinary conditions may be relied on to reproduce itself without special care, to accomplish this end it is only necessary to limit the size of tree that may be felled. This limit being fixed, I consider it a matter of altogether minor importance whether the lumberman cuts more or less in a given year, or goes over much ground or little. What wood is not taken in one year is certain to be wanted in another, and meanwhile is earning, by actual growth, an interest on its value. If we fix this value at any given rate the interest will thereafter be compounded, by growth upon growth.

My practice fixes the size of trees to be cut at (in effect) between 14 and 15 inches on the stump. Contracts read, "No spruce trees shall be cut that will not yield more than one log of 12 inches in diameter (12 feet long) at the small end, under the bark." The practical result is as above stated. This I consider sufficient to keep up the supply of logs indefinitely, while allowing an annual cut of 50,000 to 60,000 logs from an area of say 70,000 acres, of which I reckon (say) 20,000 acres as water, swamp or hardwood country. It demands a growth, roughly speaking, of about one log per acre annually on an already well timbered country. I think this is a safe calculation.

My limit of size has always been entirely satisfactory to purchasers of stumpage. There is at present a considerable demand for small spruce for pulpwood. I have never sold wood for that purpose, but I should not advise any one having spruce lands that he wishes to utilize to their capacity and at the same time keep up their value to fix the limit of size, whether for logs or pulp, below what I have done. Any considerable deviation from that I should fear would infringe on the capital represented by the present standing value of timber.

As regards care of limits, it is not very burdensome. A competent man makes occasional tours among the shanties during the lumbering season, to see that the terms of the contracts are observed, that no timber is wasted and that the cutting is satisfactory.

For returns I rely on the sworn statements of the cullers of the purchasers of rights to cut. The system most in vogue here of making logs through jobbers or small contractors is in the main favorable in this respect. Every jobber watches the cutting, and if he makes no complaint it is almost certain that I have no reason for any."

Referring to the above, Mr. Southworth says : Mr. Greenough has adopted successfully the simplest form of scientific forestry, and this course is also being followed by some of our own lumbermen. The employment of trained foresters would increase the yield on the same area, but their employment must be regulated by the question of profit and loss. In any event until trained foresters are available, Mr. Greenough's plan would seem to be the wisest under the circumstances.

### MANUFACTURING DEVELOPMENT.

The substitution of steel for wood in the construction of large buildings was thought at one time, the report states, to be likely to cause a great decrease in the consumption of timber. The total and sudden collapse of many of these steel buildings in the event of fire has, to some extent, put a check on this style of building, and new uses are constantly being found for forest products of various kinds. The rapid development of the manufacture of paper from wood has altered the relative values of our forest trees, making some of them, formerly of little use to us, very valuable indeed. This is notably the case with spruce, which in Ontario, south of the "Height of Land," is rarely found large enough for board timber. The seeds of the spruce germinate readily and grow so thickly in many parts of Ontario, especially in moist soil, that they attain but small diameter in a long period of growth, and because of this, lumbermen, in estimating the value of timber limits in former years, when their license included all sorts of timber, took no account of any but pine. The rapidly increasing demand for spruce for paper has recently caused a considerable value to be placed on many limits from which the merchantable pine has been taken. In this reference is made to the limits that were disposed of prior to 1892, since which time the spruce has been reserved by the Crown.

Our furniture manufacturers are said to be doing an increasing business with Great Britain, and until recently they have not been able to fill all the orders offered them from there. The same is the case with our paper mills, and several large orders from over the ocean have been refused. This is being remedied, however, and mills have been recently equipped or are now being fitted up especially for export business.

## THE NORTHWEST LUMBER TRADE.

THE last annual report of the Department of Interior states that the number of timber berths under license and permit in the province of Manitoba and the territories is 283, and on Dominion lands in the province of Britlsh Columbia 149. The timber dues received amounted to $69,493.18, being an increase of $7,291.08 as compared with the previous fiscal year. Of the revenue derived from timber, $23,012.52 was for bonuses, ground rent, royalties and dues on timber cut from lands in the railway belt in the province of British Columbia, being an increase of $4,493.42, as compared with the previous year. The total revenue received from timber in Manitoba and the Northwest Territories up to the 1st of July, 1897, was $1,145,574.46, and the total revenue from timber within the railway belt in British Columbia up to the same date was $303,004.93.

During the year 34,376,599 feet B.M. of lumber were manufactured from timber cut under license in Manitoba, the Northwest Territories and within the railway belt in British Columbia, and 32,894,251 feet B.M. were sold.

The following table shows the imports of lumber from the United States, and marketed in Manitoba for five years :

| Year. | Dressed. | Undressed. |
|---|---|---|
| 1893 | 180,306 ft. | 1,174,747 ft. |
| 1894 | 647,388 " | 3,073,195 " |
| 1895 | 1,108,268 " | 5,668,250 " |
| 1896 | 2,103,857 " | 9,853,883 " |
| 1897 | 1,913,832 " | 14,857,272 " |

The following quantity of lumber, coming from the directions named, was disposed of in Manitoba and at points west as far as Regina, N.W.T., during the year ended June 30th, 1897:

| | Feet. |
|---|---|
| Canadian pine, from the Lake of the Woods | 45,000,000 |
| Canadian pine, from points between Lake of the Woods and Port Arthur | 10,500,000 |
| Canadian spruce (manufactured in Manitoba) | 14,241,909 |
| United States pine and hardwood imported from the State of Minnesota | 16,871,104 |
| British Columbia products | 6,000,000 |

The current price of pine and spruce lumber, f.o.b., at the points below, is as follows :

| | Pine. | Spruce. |
|---|---|---|
| Winnipeg | $15.50 to $17.50 | $13.50 to $15.50 |
| Portage La Prairie | 15.50 " 17.50 | 13.50 " 15.50 |
| Brandon | 15.50 " 17.50 | 13.50 " 15.50 |
| Moosomin | 17.75 " 19.75 | 15.75 " 17.75 |
| Deloraine | 17.75 " 19.75 | 15.75 " 17.75 |
| Minnedosa | 17.00 " 19.75 | 15.00 " 17.00 |

## A GIGANTIC BOG OAK.

An extraordinary discovery, and one which is just now exciting considerable interest in antiquarian circles in Lancashire and Chesire, has been made at Stockport. During the excavations in the construction of sewage works for the town, some workmen came across what has since proved to be a massive oak tree with two immense branches. Professor Boyd Dawkins, the well known antiquary, is of opinion that the tree is one of the giants of prehistoric times, and he says that the tree is certainly 10,000 years old. The corporation of Stockport are at a loss what to do with the gigantic fossil, which is supposed to weigh about 40 tons, and as it is necessary that it should be removed a proposition has been made to blow it up with dynamite. This has aroused the indignation of a large section of the public, who recently presented the following petition to the corporation : "That there is a valuable tree of old oak at present lying upon and exposed in the gravel on and within their property. That the quality of color, grain, and solidity is better than any that can be bought in the open market. That as for artistic work alone it is greatly to be treasured ; for nothing in this country is at present grown which can come up to its dimensions. That it contains within itself sufficient material to make the furniture for any public building or town hall which may be erected for the public benefit within our borough. That it only requires lifting from its bed, which, in the opinion of competent geologists, may be roughly estimated at 15,000 years of occupation. That private effort has failed to achieve its removal. That its destruction would be a public loss and an artistic calamity. That your representatives in council be, and are hereby requested to conserve for the borough this grant of nature to her sons and daughters, whose signatures are hereby affixed."

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., JUNE 29, 1898 No. 23.

**CANADA LUMBERMAN**

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:

NEW YORK LIFE INSURANCE BUILDING,

MONTREAL.

**Weekly Lumberman,** published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

## PROVINCE OF QUEBEC

## Department of Lands, Forests and Fisheries.

### WOODS AND FORESTS.

QUEBEC, 7th May, 1898.

Notice is hereby given that, conformably to sections 1334, 1335 and 1336 of the Consolidated Statutes of the Province of Quebec, the timber limits hereinafter mentioned, at their estimated area, more or less, and in their present state, will be offered for sale at public auction, in the Department of Lands, Forests and Fisheries, in this city, on TUESDAY, THE 16TH DAY OF AUGUST next, at ELEVEN o'clock a.m:

Upper Ottawa—Bloc A, range 6: ½ N. No. 1, 25 m.; ½ S. No. 1, 25 m.; ½ N. No. 2, 25 m.; ½ S. No. 2, 25 m.; ½ N. No. 3, 25 m.; ½ S. No. 3, 25 m.; ½ N. No. 4, 25 m.; ½ S. No. 4, 25 m.; ½ N. No. 5, 25 m.; ½ S. No. 5, 25 m; ½ N. No. 6, 25 m.; ½ S. No. 6, 25 m.

Bloc A, range 5: ½ N. No 3, 25 m.; ½ S. No. 3, 25 m.; ½ N. No. 4, 25 m.; ½ S. No. 4, 25 m.; ½ N. No. 5, 25 m.; ½ S. No. 5, 25 m.; ½ N. No. 6, 25 m.; ½ S. No. 6, 25 m.; ½ N. No. 2, 25 m.

Bloc A, range 4: ½ N. No. 1, 25 m.; ½ S. No. 1, 25 m.; ½ N. No. 2, 25 m.; ½ S. No. 2, 25 m.; ½ N. No. 3, 25 m.; ½ S. No. 3, 25 m.; ½ N. No. 4, 25 m.; ½ S. No. 4, 25 m.; ½ N. No. 5, 25 m.; ½ S. CONDITIONS OF SALE.

No limit will be adjudged at less than the minimum price fixed by the Department.

The limits will be adjudged to the highest bidder on payment of the purchase price in cash or by cheque accepted by a duly incorporated bank. Failing payment, they will be immediately re-offered for sale.

The annual ground rent of three dollars per mile, with fire tax, is also payable immediately.

Those timber limits, when adjudged, will be subject to the provisions of all timber regulations now in force, or which may be enacted hereafter.

Plans of limits offered for sale are open for inspection in the Department of Lands, Forests and Fisheries, in this city, and at the office of the Crown lands and timber agents in the different agencies in which said limits are situated, up to the day of sale.

N.B.—No account for publication of this notice will be recognized, if such publication has not been expressly authorized by the department.

S. N. PARENT,
Commissioner of Lands, Forests and Fisheries.

FOR SALE.

ONE GOOD SECOND HAND BAILEY GAUGE Lathe for turning fork handles, stems, curtain poles, &c.; one 24 in. Pony Surfacer; one bolter for pickets, squares, &c. Box 156, Thamesville, Ont.

# Auction Sale

IN THE MATTER OF

## Gascapedia Pulp & Lumber Co.,

IN LIQUIDATION.

NOTICE IS HEREBY GIVEN THAT ON

## Thursday, the 14th July, 1898,

will be sold at the office of the undersigned, 125 St. Peter Street, Quebec, the following assets belonging to the estate:

A—About forty acres of land in superficies, situate at Maria, County of Bonaventure, P.Q., with the new saw mill of 135 x 45 feet and a wing of 70 x 40 feet, containing an engine of 300 horse power, Circular Saws, Gang of Saws, and the most modern machinery. The mill can deliver 100,000 feet of sawn lumber per day. Also all the buildings erected on the grounds, viz.: Shops, Private Dwellings, 2 Stables and other buildings.

B—The Timber Limits of the Salmon River, containing 76 miles. These limits are very rich in Spruce, Cedar and Pulpwood.

C—The rights of the Company on the Eskiminac Timber Limits, containing 103½ miles. The Eskiminac River, as the Salmon River, discharge into the Grand Cascapedia.

D—About 5,000 feet of Booms.

E—Three Scows, 54 x 19 feet, Boats, Chains and Anchors.

F—The Utensils, Tools, Blankets, &c., &c., required for shanties contained in the shops of Eskiminac and Maria, valued at $1,47c.31.

G—Carts, Harnesses, Horse Blankets, &c., &c., $495.10.

H—Blacksmiths' Tools, Iron in Bars, Iron Lathe and Machines for Mechanics' Shop, $1,056.77.

I—Spare Leather and Rubber Belts, Shingle Machine, Tools, &c., $1,112.31.

J—The Farm Eskiminac, containing about 600 acres of land, with houses, barn and other buildings thereon erected.

Conditions of payment—Cash.

An accepted cheque of $5,000 for item A, and of $2,000 on each item B and J, shall be deposited in the hands of the Liquidator by the highest bidder before adjudication.

Inventory of items F, G, H, I, is deposited in the office of the Liquidator, who will give any information required.

Sale at 10.30 o'clock a.m.

ALFRED LEMIEUX,
Liquidator,
People's Chambers,
Office: No. 125 St. Peter Street, Quebec.

JACQUES & CIE,
Auctioneers.

FOR SALE.

GOOD PORTABLE SAW MILL, WATEROUS outfit, 25 h.p. If not sold, will take contract for sawing. THOS. HOLLIS, Egerton, Ont.

WANTED—SPRUCE HANDLES.

EXPORT HOUSE DESIRES TO CORRESpond with manufacturers of Spruce Broom Handles with view to purchasing supplies. Address "HANDLES," care of CANADA LUMBERMAN, Toronto.

FOR SALE.

FOLLOWING SIDINGS FROM LOG MANUfactured into deals for the English market: Pine, thirds and better, 1, 1¼ and 1½ in.; fourths, 1, 1¼, 1½ and 2 in., being sound knotty lumber; first culls, ⅝, 1, 1¼, 1½, 2 and 3 inch—this has little red and unsound, but good for boxes. Spruce, good 1 and 1¼ inch; cull, ⅝, 1 and 1¼ inch. Deliverable on boat or barge here. Address P.O. Box 59, Three Rivers, Que.

### CURRENT TRADE CONDITIONS.

ONTARIO.

As yet there have been no evidences of the usual falling off in the lumber demand incident to the summer season, but on the other hand, inquiries have increased within the past week. The amount of building in progress and about to be commenced is great that considerable buying of lumber so is likely to be done throughout the whole season. There is now a scarcity of dry stock, for which slightly advanced prices are being offered. From the Ottawa valley there is some movement of lumber, chiefly box grades, to the United States. Reports from the Georgian Bay are to the effect that the cut this year will not be heavy, as many logs are being sold to Michigan manufacturers, who are offering very liberal prices. In white pine, common and mill culls are most asked for. Hemlock is selling freely, but complaint is heard of extremely low prices. Local industries are consuming large quantities of hardwoods, and the outlook for this branch of the trade is more promising than for many years. One manufacturer made a sale last week of 100,000 feet of basswood, mill run, at $11 per thousand, as well as a large amount of hemlock timber for canal work. Soft elm is also much enquired for. Toronto dealers report numerous inquiries, but the difficulty of securing suitable dry stock is restricting business. There is an unusually brisk demand for shingles.

QUEBEC AND NEW BRUNSWICK.

There are a number of vessels loading timber and deals at various Quebec ports for the European market, but shipping is not nearly so active as last year. Apart from the regular yearly contracts, sales have been very light. A greater movement of stock for local consumption is reported, and contracts are about to be awarded for the erection of several large buildings in Montreal, including the new St. Jean Baptiste church and a theatre building for the Western Theatre Company. The feeling among lumbermen in the Maritime provinces is more hopeful. A fair quantity of spruce has been sold for shipment to France and the east coast of England, and in view of the light production of logs last winter, and the apparent decision of shippers to hold stock, it is believed that prices will improve before many weeks. Spruce deals now range from $8.50 to $9, but there is no buying of

any account. There is nothing doing in United States trade.

MANITOBA AND BRITISH COLUMBIA.

Manufacturers and retailers report a heavy distribution of lumber throughout Manitoba and the Northwest. Railway work and new buildings are consuming much more material than usual, while the encouraging crop outlook is stimulating farmers to carry out further improvements. It is expected that all the drives will reach the mills. The export trade is the only branch of the lumber business in British Columbia that is not active. Freights remain very high, and little chartering is heard of. The local and eastern demand is growing in volume.

UNITED STATES.

The demand for lumber in the middle and south-western states continues to swell as a result of abundant crops, and the outlook is very favorable, There will this season be a greater consumption than usual of northern pine in agricultural districts, to the relief of the eastern markets. There are indications of some improvement in the New England states and New York, and more confidence is shown by lumber dealers in future trade. The gain which has shown itself within the past week has been more in the direction of increased inquiries than in movement of stock, but at some points considerable lumber has changed hands. The constant enquiry for box lumber is still the pronounced feature of the eastern trade, and is regarded as indicative of prosperity in general manufacturing. Nor is it anticipated that there will be any falling off in the demand for box grades before late in the fall. Some large sales of piece stuff have also been made at satisfactory figures. It is encouraging to note that prices of pine have not weakened in the east as a result of decreased building operations and lessened requirement. Dry hardwoods have lost nothing since last report either in demand or price. The new cut is not being contracted for as speedily as the conditions would warrant, but a quite heavy fall trade is anticipated. The probable supply is not large, and values should be firmly maintained throughout the year. There is a brisk enquiry for eastern shingles, both pine and cedar. Red cedar shingles seem to have lost ground within the past month.

FOREIGN.

Though in the British market contracting is backward for the season of the year, the consumption from timber on hand continues active, and stocks are becoming reduced. There is every probability that present prices will be maintained throughout the year, and in some lines an advance is expected. A feature of the trade this year is that a number of importers who usually buy quite heavy for early shipment have this season been operating with extreme caution, on account of the rather uncertain state of the market. Owing to the high freight rates and difficulty in securing tonnage, very few c.i.f. offers have been made, shippers preferring to sell f.o.b. The position of spruce deals seems to be improving ; higher prices are asked, and we would not be surprised to witness a fairly brisk fall demand. Pine deals are steadier, and show little fluctuation. In square timber there is little doing, although reports state that there are more inquiries for first-class wood. Ship-building on the Clyde is active.

## STOCKS AND PRICES.

The steamer Ullapool sailed last week from St. John, N.B., for Liverpool with a large cargo of deals.

The steamship Pacific, sailed from St. John, N. B., on Saturday last for Penrith, for orders, with 1,153 standard of deals, shipped by Alex Gibson & Son.

At the Crown Lands office, Fredericton, N.B., a timber berth at head of Jacquet and Tattagouche rivers, 6 miles, was sold to Damery & Vaughn, at $120 per mile.

The Arthur Hill Company, of Midland, Ont., have sold fifteen million feet of logs for export to Michigan, and only a small surplus will be left to be cut at Midland.

It is stated that the cut of lumber on the Miramichi river, both branches, last winter, was 55,000,000 feet. All but a couple of small drives came out.

The lumber trade at Boston continues dull. There have been but few arrivals from the east. Quotations are unchanged at $11 to $12 for spruce cargoes, and $13 to $13.50 for ten inch car lumber.

It is understood that Mr. Churchill, of Bay City, Mich., has purchased a quantity of logs from the Parry Sound Lumber Company. He is also negotiating for the purchase of the Conger Lumber Company's logs.

The Anglo-American Iron Company, Ormsby or Trenton, Ont., want prices from portable saw mill men for sawing three hundred thousand feet of logs, railway ties and shingles at Trenton Grove, on the C.O.R.

Messrs. Craig & Austin, of Kinmount, Ont., have shipped from their saw mill this season 15 carloads of shingles, 25 cars of lumber, 50 cars of mill slabs and 70 cars of R.R. ties. This is independent of the home trade.

The steamer Tiverton finished discharging her cargo of sulphur at Montreal last week, and sailed for Three Rivers, where she will load a full cargo of timber and deals for Glasgow. McLean, Kennedy & Co. are the agents.

Turner & Fisher, of Bay City, Mich., received a raft from French river last week containing 3,200,000 feet of logs. W. & A. McArthur, of Cheboygan, received a raft of 5,000,000 feet of logs, and have 8,000,000 feet more to come from Canada.

Steamer Arbela, which sailed from Miramichi with over 3,000,000 feet of deals for Belfast, is a total wreck on the Newfoundland coast, and vessel and cargo are offered for sale there. The schooner Harry, bound to New York from Shulee, N. S., with piling, is a total wreck on an island down the bay.

On Saturday evening, June 18th, the steamer Pembroke towed to the head of the Calumet the sixth timber tow of the season, comprising the first section of Mr. Thos. Mackey's raft from the Coulonge. On Monday afternoon she arrived with the second section. The two sections together form an immense raft of 204 cribs, which will be delivered in Quebec.

Considerable lumber has been cut in Pictou county, N. S., this spring. At Glengarry Siding something over three million feet of lumber is awaiting shipment ; at Lorne Siding over one million. At Glengarry station there is a large pile. There were three mills in operation all spring, the combined product of which totalled probably 5,00,000,000 feet.

Some eight or nine of the mills at St. John, N. B., are now sawing. There are eleven square rigged vessels and one steamer loading, and a steamer has just finished loading. Eighteen steamers and twenty-two large sailers are chartered to come to that port. Only 1,378,720 feet of long lumber, 2,738,600 laths, 391,000 shingles, 465 pcs. piling and 193 cords wood cleared last week for United States ports. Two cargoes cleared for British ports and one for Spain.

Concerning the timber trade of West Hartlepool, Eng., the Timber News says: Shipbuilding continues very brisk, there being no less than about 20 steamers now building here, representing in all about 80,000 to 90,000 tons d. w. This must mean a tremendous consumption of timber, and as orders have been booked sufficient to keep the yards going well into next year, both here and in the Tees, the demand for shipbuilding sizes will no doubt be heavy before the end of the season.

Referring to a recent auction sale at London, Eng., the Timber Trades Journal says : The little lot of ash timber referred to realized 50s., which does not leave much for the first cost of the wood ; this class of wood, however, has gone out of fashion for furniture work, and the trade in American ash is now limited to very small proportions. The mouldings and doors fetched previous prices, but values depend so much upon the condition of the article and the quantity in stock that there is no current price to guage them by.

## THE COOPERAGE MARKET.

The Sutherland Innes Co., of Chatham, Ont., thus review the cooperage market :

Orders are coming in freely, and on account of the fine weather in the timber belt, a large amount of slack barrel stock is being jointed, and the wants of consumers are being rapidly furnished. Hoops have been drying out nicely, and orders are being rapidly filled. We may, however, state that stocks in manufacturers' hands are unusually small for this season of the year, and with the heavy demand that is probable one month from now, on account of the fruit crop, we believe that manufacturers will be taxed to the utmost to fill orders. There has been considerable sales of fruit barrel stock already made, and manufacturers are cutting a limited quantity of this stock in anticipation of future orders. There is also a considerable quantity of 5½ feet and 6½ feet hoops being manufactured specially for this trade, and on which manufacturers expect to realize good prices. No. 2 stock is exceptionally scarce, and commands high prices. There has been considerable stock exported, both slack and tight barrel stock, ocean freights being considerably easier, and lower rates being quoted via Montreal, New York, Boston and the principal American seaports.

The amount of tight barrel stock that has been exported is unusually large for this season of the year. Prices remain steady, with good demand both for home and foreign trade. The only trade that is unsatisfactory at the present time is the Northwestern markets. Prices in Minneapolis for flour barrel stock, staves, hoops and heading, have been exceptionally low. The demand has been light, and many of the shops are being furnished under contracts made at low figures. Formerly there was a very large quantity of slack barrel stock shipped from Canada to Duluth by water on low freight rates, which went in on Minneapolis markets. This year nothing whatever is going forward from Canada, and the export and home trade will use the bulk of the Canadian production. A large number of the mills in Michigan, Ohio and Indiana find great difficulty in running, on account of the short supply of timber, but with more favorable weather conditions, the bush is drying out fast, and mill owners will shortly be able to put in teams and truck out logs. This will be done at an extra expense, but manufacturers fully believe that the conditions look so favorable that they will be warranted in going to the additional expense, as they will realize much higher prices for their goods this fall and winter.

## FIRES.

A. Smith's saw mill at Fesserton, Ont., was burned recently, entailing a loss of $5,000.

The mills of the Assiniboine Lumber Company at Shell River, N.W.T., were burned recently.

The Coleman planing and lumber mill at Burlington, Ont., was completely destroyed by fire last week.

The saw mill of Alfred McDonald, at Point St. Charles, near Peterboro, Ont., has been consumed by fire.

W. Doherty's saw mill at Campbellton, N.B., was destroyed by fire on June 25th, at a loss of $10,000. There was no insurance.

The saw mill of G. T. Cook, at Cook's Brook, Gay's River, N.S., was destroyed by fire recently. There was no insurance.

A saw mill at Tracey's Mills, N.B., owned by Sloat & Miller, was burned recently. Over 125,000 feet of lumber was also destroyed.

Jos. Bourque's planing mill and lumber yard at Hull, Que., were completely destroyed by fire last month. There were also burned 75,000 feet of lumber and a quantity of doors, sashes and blinds. The loss is $12,000, partially covered by insurance.

The Rat Portage Lumber Company's sash and door factory at Rat Portage, Ont., was destroyed by fire a few days ago, together with about 10,000 feet of lumber. The other buildings on the mill property were saved. The loss will be about $5,000 ; insured.

## SHIPPING MATTERS.

Three steamers which have been fixed to take cargoes of spool wood from Miramichi to Greenock will complete their cargoes with deals at from 41s 3d to 42s 6d.

A report from British Columbia says: Among the latest charters reported is the British ship Pentheselia, which will load for South Africa at a Sound port at a rate of 70s. The British barks Himalaya and Veritas have been chartered to load at Chemainus, in July, at 43s. 3d. for Sydney, with the option of Melbourne on Adelaide at 50. They are both small vessels, their combined carrying capacity being only 2,000,000 feet. Another ship of 1,500,000 feet capacity has been chartered for August, loading for South Africa, at 65s.

The following charters are reported : The Norwegian bark Segrid, Kouchibouguac, N. B., to United Kingdom, deals ; str. Aureola, Bangor to Glasgow, deals, 45s ; str. Islock, St. John, N.B., to Amsterdam, deals ; s.s. Myrtledene, St. John, N.B., to w.c. England, deals, 42s 6d ; str. Zanzibar, Sagnenay River to Liverpool or Greenock, lumber, 75s ; barks Katahdin, Pensacola to Montevideo or Buenos Ayres, lumber, $14.50 ; Cuba, Montreal to Buenos Ayres, lumber, $12, Rosario, $13 ; E. A. O'Brein, Boston to Buenos Ayres, lumber, about $11.

## LUMBER FREIGHT RATES.

### CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse and Rome, $2.20 per M ft., (3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Quebec, $2.00; Arnprior to Montreal, $1.50 per M; Quebec, $2.50; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.; Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to New York, via Albany and Williams Line, seasoned pine lumber and shorts, in lots 50 M feet and over, $2.50 per M; under 50 M feet, $3.00 per M; from Arnprior, lots over 50 M feet, $3.00; under 50 M feet, $3.75 per M; from Parry Sound, lots 50 M feet and over, $4.00 per M; seasoned lath from Ottawa, lots 250 M pieces and over, 50 cents per M pcs.; lots under 250 M pcs., 60 cents per M pcs.; from Arnprior, lots 250 M pcs and over, 60 cents per M pcs.; under 250 M pcs., 70 cents per M; from Parry Sound, 80 cents per M pcs., lots 250 M and over; (rates named on lots under 50 M feet lumber and 250 M pcs. lath subject to extra towage. Rates on 50 M feet lumber and over and 250 pcs. lath are applicable to all points in New York city excepting points above Madison avenue bridge in Harlem river, to all points in Brooklyn, and to Jersey City proper; Ottawa to Boston, Portland and common points, local 15c.; exports 13c. per 100 lbs.; Arnprior to Boston, Portland and common points, local 17 cents; export 15 cents per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cents per 100 lbs.; Ottawa to Burlington, 6 cents per 100 lbs.; Ottawa to Albany, 10 cents per 100 lbs.; Arnprior to Albany, 12 cents per 100 lbs.; Parry Sound to Albany, 17 cents per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N. Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

### GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

### CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent, C.P.R., writes as follows under date of February 14th, 1898: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior, Braeside and Pembroke, to Toronto, the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30,000 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa, Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M feet and over, $3; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 55c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $3.25; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4.25; under 50 M feet, $4.50; lath, 250 M pieces and over, 60c. per M pieces; under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3.50; under 50 M feet, $3.75; hardwood, 50 M feet and over, $4.50; under 50 M feet, $4.75; lath, 250 M pieces, 65c.: under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts, 50 M feet and over, $3.75; under 50 M feet, $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 70c.; under 250 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c. per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.; lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 11c. per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil. The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber."

# THE NEWS.

—Kerns & Marks have opened a retail lumber yard at Plum Coulee, Man.

—King Bros., Limited, lumber merchants, Quebec, have been incorporated.

—Tourigny Paul, saw and shingle mill, Victoriaville, Que., is offering his business for sale.

—T. Prefontaine & Co., lumber dealers, Montreal, have obtained charter of incorporation.

—The Eau Clair Lumber Co., of Calgary, have closed their branch business at Regina, N.W.T.

—The Rathbun Co., Deseronto, Ont., are offering their general merchandise bnsiness for sale.

—Patineaud Bros. will establish a saw mill at Dufresne, on the N.P. railway, near LaSalle, Man.

—Mr. George Paget has gone to England to negotiate for the sale of the Sturgeon Falls pulp mill.

—The Patent Clothboard Co., of Parry Sound, Ont., recently shipped two carloads of clothboards to Scotland.

—Messrs. Lennox & Kerr, of Walkerton, are preparing to erect a spool and bobbin factory at Owen Sound, Ont.

—A change has been made in the Dominion tariff, by which the duty on rubber belting is increased from 20 to 25 per cent.

—It is said that the Rat Portage Lumber Company are considering the equipment of its yards and buildings with electric light.

—It is reported that John O'Donnell, lumberman, of Bobcaygeon, Ont., was recently held up and robbed of $500 near Selwyn.

—The Imperial Lumber Co., of Toronto, has established a branch at Tonawanda, with office in Cowper & Co.'s building on Main street.

—Messrs. Dillon & Thompson, of Shebishekong, Muskoka, have taken the machinery out of the shingle mill there and put in saw mill machinery.

—The Prest Lumbering Co. is preparing to erect a new steam mill at Arlington, N. S., on the site of the one destroyed by fire last summer.

—Hon. C. B. Buckman has purchased an interest in the Beaver Mills saw mill on Rainy river, and will open an office and lumber yard at Rat Portage, Ont.

—Messrs. Shipe & Avery, of Toronto, manufacturers of bicycle rims, are looking for a site in Western Ontario for a factory which they propose to establish.

—The McEachren Heating & Ventilating Co., of Galt, Ont., has placed an order with the Jenckes Machine Co., of Sherbrooke, Que., for one of their patent Dake engines.

—Surveys are being made to determine the boundaries of certain timber limits on the Rouge river, the Ottawa Lumber Co. and Mr. J. K. Ward being the interested parties.

—The Sarnia Post says that the Ontario Lumber Co. will establish a large planing mill at Point Edward, using the roundhouse as a nucleus. The company already have large lumber yards and docks at the Point.

—H. B. Mitchell, lumber manufacturer, of Selkirk, Man., has undergone a number of operations owing to a gunning accident in which his hand sustained serious injury, but up to date he has not found much relief.

—The New York Lumber Trade Association has organized a movement to boycott commission men, and to induce builders and others to buy only of the regular dealers who carry stock or buy and sell on their own capital.

—Messrs. Matthews Bros. & Co., picture frame manufacturers, have recently purchased the planing mill at the Dundas bridges, Toronto, and are adding new stickers and resawing machinery adapted to their requirements.

—Between ten and fifteen thousand logs have been boomed at Tweed, Ont. Louis Fobear, who has a complete portable saw mill in operation on the Easterbrook mill property, has the contract with the Rathbun Co. for cutting them into ties and lumber.

—John Gillies, James Gillies and David Gillies, of Carleton Place, Louis Laconture, Montreal, and Joseph Octave Blondin, of Baie des Peres, are applying for incorporation as the Temiscamingue Navigation Company. The head office is to be in Ottawa.

—The E. B. Eddy Company, of Hull, Que., are about to erect a new match factory, to be equipped with the most improved labor-saving machinery. It is said that where 40 men are now employed, four will be sufficient to do the work with the new appliances.

—The Arrowhead Saw and Planing Mills Co. has established a saw and planing mill on the south arm of Arrow Lake, south of Revelstoke, B.C., with a capacity of 20,000 feet per day. A sash and door factory in connection will employ about 30 men. The company has opened yards at Nelson and Revelstoke. The officers of the company are J. C. DeCew, president; W. M. DeCew, manager; T. H. DeCew, secretary.

—Messrs. Geo. M. Webster & Co., coal handlers, of Quebec, are improving their facilities for unloading steamers, and for this purpose have placed an order with the Jenckes Machine Co., of Sherbrooke, Que., for four of their double cylinder rapid coal hoisting engines, with boilers.

—The Canadian Yukon Lumber Company is applying for incorporation, with headquarters at Montreal. The applicants are Richard Wilson Smith, William Miller Ramsay, Thomas George Roddick, M.P., Edgar Francis Hand and Henry Bulmer. The capital is placed at $100,000.

—The Canadian Copper Co., of Copper Cliff, Ont., are fitting a new shaft, and have placed an order with the Jenckes Machine Co., of Sherbrooke, for two 100 h.p. special steel boilers, one 12 x 15 double cylinder double drum winding engine, three large steam pumps and rock breaker, and necessary gear for operating same.

—Concerning end matched flooring, about which we recently received an enquiry, a correspondent writes: "We do not see any advantage in having this class of flooring end matched, and our opinion is that it is simply a craze or fad fostered by manufacturers in the United States, who use it for the purpose of securing trade."

—The Bell Asbestos Co., of Thedford Mines, Que., are changing over their system of operating their mine hoist, and for this purpose have placed an order with the Jenckes Machine Co., of Sherbrooke, Que., for one of their 100 h.p. steel tubular boilers, and have also purchased from the same company one of their small locomotives, for shifting cars in pits.

—Application has been made for the incorporation of the H. R. McLellan Co., Limited, to carry on a lumber business, with headquarters at Ottawa. The capital stock of the company is $500,000. Among those interested are H. R. McLellan, of St. John, N.B.; David Maclaren, of Ottawa; and Alex. Maclaren, of Buckingham. The new mill of the company is located at St. Margarets' Bay, N. S., and has a daily capacity of 75,000 feet.

—Messrs. King Bros., the enterprising lumbermen of Quebec, have closed a contract with the Jenckes Machine Co., of Sherbrooke, Que., for a complete saw mill, consisting of two 60 h.p. boilers, one 100 h.p. engine, one rotary saw mill with Dake steam feed, one double edger, one resawing machine, and entire shafting and pulleys. It is the intention of Messrs. King Bros. to erect this mill on the lower St. Lawrence the coming summer.

—Mr. Moore, of the British Columbia Mills, Timber and Trading Company, Vancouver, B.C., in a recent interview with a representative of the Commercial, said: "A good local and eastern business is doing at the coast mills, but foreign business has been quiet, owing to the scarcity and high rates of freight. Recently, however, rates were tending lower, and some charters have been made at reduced rates. Logs are scarce, and the mills have not material with which to do a very large export business. Shingle bolts are scarce."

## CASUALTIES.

—Thos. Train had the first finger of his right hand cut off by a shingle saw in Rathbun's mill at Lindsay.

—A workman named Vizina had one of his legs broken in the Hull Lumber Company's saw mill at Hull last month.

—David Asselin, employed on Gilmour & Hughson's drive, was drowned at Windfall Lake while jumping from one log to another.

—A man named Grosselle, working on the drive for the Ontario Lumber Co., fell off a log in Doller's creek and was drowned.

—While driving logs on one of McLachlin Bros.' drives upon the Bonnechere river, Charles St. Louis, of the township of Grattan, fell into the water and was drowned.

—Alex. McLennan, lumber manufacturer, of Casselman, Ont., had his hand badly crushed in his mill last month. Blood poisoning set in, which necessitated partial amputation.

—The eleven-year old son of John Buckham, of Aylmer, Que., was killed in Bailey's mill at that place by being caught in one of the pulleys and whirled around several times with terrific force.

—W. McGillivray, engineer at Tait's saw mill on False Creek, Vancouver, B.C., was caught in the fly-wheel of the engine and whirled around at a tremendous rate. One leg was broken, and internal injuries received.

## PERSONAL.

Mr. Frank Hillock, lumber merchant, Toronto, has gone on an extended European trip.

Mr. J. Ryan, of Three Rivers, Que., has been appointed woods and forests agent for the district of St. Maurice.

Mr. H. J. Pettifer, representing a syndicate of English newspapers, is at present in this country on a business trip.

Capt. Jas. Hamilton, for the past 18 years with M. M. Boyd & Co., of Bobcaygeon, Ont., has resigned, and has accepted the command of the steamer North Star, plying on the Peterboro' waters.

Mr. Geo. Thomson, late of Wingham, Ont., with his two sons, are now operating the Goderich Lumber Company's mill at Goderich, and report trade very good. The logs are towed from the peninsula.

Mr. Frank E. Coombe, who has been appointed manager in England of the Canadian Furniture Exporting Company, with headquarters at Manchester, left Kincardine last month to assume his new duties.

Allan Gunn, formerly of Barrie, and during the sixties one of the wealthiest and most prominent lumbermen in Canada, died at Orillia on May 18th. Mr. Gunn was 82 years of age, and was a schoolmate of the late Sir John A. Macdonald.

Mr. James Stark, lumberman, of Paisley, Ont., will soon enjoy a re-union with friends in his Mother-land, after an absence of 27 years, having sailed on June 25th for England. THE LUMBERMAN wishes Mr. Stark a safe and pleasant voyage.

Mr. J. W. Taylor, who operates a sash and door factory at Exeter, Ont., was a recent visitor at THE LUMBERMAN office. Mr. Taylor appeared pleased at the increased present and prospective trade, remarking that building operations have not been so active for many years.

It is understood that upon the resignation of Mr. C. P. Higgins, Mr. H. Cartwright has been promoted to the assistant registrarship of the Ontario Crown Lands Department, and that Mr. Michael P. Doherty, of East Peterboro', has been appointed in Mr. Cartwright's place.

Mr. H. J. W. Carbray has been transferred from Quebec to Montreal, where he will manage that branch of the well-known shipping firm of Carbray, Routh & Co. Mr. Carbray was for fifteen years Collector of Crown Timber Dues for the province of Quebec, which office was abolished last October.

## TRADE NOTES.

We regret to learn of the financial embarrassment of McMillan & Haynes, saw manufacturers, of St. Catharines, Ont.

A. N. Bishop, Annapolis, N. S., is enlarging his saw mill, and has purchased an engine and boiler from the Goldie & McCulloch Co., Galt, Ont.

The Lancaster Machine Works report numerous inquiries for their Stafford timber gauge. A large order was recently booked by this firm for Holland.

N. P. Tanguay, of Weeden, Que., has placed an order with the Jenckes Machine Co., of Sherbrooke, Que., for one of their patent Crocker turbines, complete with gate, draft, tub and gearing.

D. S. McArthur & Co., of Nelson, B. C., are developing their properties, and recently purchased, through the Rossland branch, of the Jenckes Machine Co., one of their complete hoisting plants.

The Jenckes Machine Co., of Sherbrooke, Que., recently supplied the Sydney Mine at North Sydney, Cape Breton, with one of their special coal hoisting engines, to be operated by compressed air. The compressor was supplied by the Canadian Rand Drill Co., of Sherbrooke, Que.

Mr. O. E. Young, of Magog, is building a small pleasure boat for Mr. L. B. Ward, of Brooklyn, N. Y., to be used on Lake Memphremagog, and an order has been placed with the Jenckes Machine Co., of Sherbrooke, Que., for one of their 7 h.p. Dake marine engines, with boiler to run the same.

Under date of May 25th, Mr. D. K. McLaren, manufacturer oak tanned leather belting and mill supplies, Montreal, advises us that his factory is busily engaged turning out a belt order for Messrs. W. Doherty & Co.'s new factory at Clinton, Ont. This order amounts to upwards of three thousand feet, and was placed through his Galt stock depot.

## ONE OF THE BEST.

MESSRS. J. & R. Miller, Mount Elgin, Ont., in renewing their subscription to THE CANADA LUMBERMAN, write:—"We consider your paper to be one of the best on the continent for those engaged in any branch of lumbering. If the ideas given in its columns in regard to saw mill machinery and methods of working up what would otherwise be waste material were acted upon, they would materially increase the mill owners' profits."

## THE LUMBER SURVEYOR.

In our rich virgin forests, which have thrived since time began,
With their tinted crests—the maple, spruce and pine,
Tread the ruthless devastators—the hardy lumbering man
And surveyor with his scaling rule and line.
The grand old trees primeval, which for centuries have withstood
The assault of countless seasons' cold and heat,
Are robbed of their bright beauty, and put, by reckoning good,
Into plain, prosaic, superficial feet.

Amid the deaf'ning rumble and the hiss of buzzing saws,
Where backbone and sinew tug with might and main,
Where the trees that formed the forest are grasped in iron jaws
And by teeth which rend their fibrous veins in twain ;
There, amid the blinding sawdust and the roar of flying wheels,
The surveyor with his red chalk takes his stand ;
And in that never-ending, ceaseless line of running deals
His own brain must be the force that speeds his hand.

By the steamer's rugged steel sides, which loom up black and vast
O'er the waters of the harbour's placid tide,
Where the throbbing engines rattle as slings of deals are passed
From the schooner's deck that nestles at her side ;
And the men who do the labor, nor pain nor ache they feel,
Nor yet care they aught for cold or heat or wet,
And swift the slingers sling them with their brawny arms of steel
To the hold wherein the sturdy stowers sweat.

The eye that takes the length and breadth and thickness must be keen,
And the hand that makes the tally swift must be,
And the look must needs be cautious to tell a rot or seam
Or the bark that still clings to its mother tree.
And though we may not be well versed in lit'rature or art,
And dead languages be far beyond our ken,
The thews, and brawn and sinews of our country, and the heart
And the backbone are the lab'ring lumbermen.

—W. PAUL MCCORMICK, St. John, N.B.

## NEW USE FOR SAWDUST.

THE London Timber Trades Journal thus describes a new fuel lately patented in England : It is for a new fuel, which appears to possess much merit and to deserve careful consideration of wood-workers. It is of the briquette class, but formulated on entirely new lines. The large blocks heretofore employed give way to a cube 2½ in. x 2 in. x 2 in., experience proving this the best universal size. It lights readily, gives out more heat, and burns longer, weight for weight, than the best coals. It is very hard, there are neither dust nor "blacks," and, what is particularly to the point, it costs less than coals. Sawdust forms an appreciable percentage of the composition, and in these days of economical uses for by-products, the opening of a new field for the advantageous disposal of wastes from saw mills is pleasant to hear of.

## EXPERIENCE OF A LUMBER SALESMAN.

THE Toronto World is responsible for the following : "One American who thought, as thousands of his countrymen do, that only Yankees can fight found out to his cost, at Trout Creek, near North Bay, yesterday that Canadians know something about it too. In an hotel at Trout Creek an American traveller for the Delta Lumber Co., of Detroit, stopped in his brag about whipping Spaniards to remark that Canadians were little better, and then rehearsed the old story that if "Gatling Gun" Howard had not appeared on the scene during the last Indian trouble the starving halfbreeds would have whipped them. A Canadian who was quietly reading his paper dropped it at this point to remark : 'We can't fight, eh?' and throwing off his coat, had the Yankee licked and lying in the corner before the astonished crowd knew what happened."

# WOOD PULP DEPARTMENT

## CANADIAN WOOD PULP IN THE BRITISH MARKET.

IN his annual report of the Department of Trade and Commerce, the High Commissioner for Canada refers at some length to the probable market for Canadian wood pulp in Great Britain. Among other things he says : "I am informed, by those engaged in the trade, that Canadian sulphite pulp is liked by most buyers who have placed sample orders, but that before it can replace, or compete successfully with that from Scandinavia, Canadian makers will require to study uniformity in quality and uniformity in moisture. This want of uniformity is a serious fault which Canadian makers are stated to underestimate. The Scandinavian makers are quite alive to its necessity, and as the result they practically command the market at the present time.

Canadian mechanical pulp is popular, and the trade, I am informed, would largely extend if the produce was covered with cheap canvas instead of being shipped in loose bundles. Being without covering and with fifty per cent. moisture, the pulp seems to absorb the dirt and dust inseparable from quay sides. Much good pulp is therefore lost through being handled in this condition, and the money value which it represents would go far to provide the canvas, which need only be of very inferior quality.

Some of my correspondents seem inclined to enter into a discussion upon the position of Canada and the United States in regard to this trade. Various suggestions have been made to me by which Canada might command the business. One is, that a duty should be levied on pulp wood exported from Canada. A step of this kind, it is claimed, would stop the import of paper into England from the United States, which tends to interfere with the use of Canadian pulp by the makers here owing to the low prices at which American paper is placed on the market. The following is an extract from a letter from one of my correspondents :—

"We beg to say we are of the opinion that a duty on pulp wood on leaving Canada would stop the import of paper into England from the United States and give that trade to Canada. Our experience is that Canada can compete with Scandinavia in the export of wood pulp to England and hold her own, so if she can do this, she will equally as well be able to compete with Scandinavia in the supply of paper to this country. The keenest competition in the pulp trade is to supply mechanical pulp for newspaper and wall paper manufacturing, and for this purpose the Canadian spruce pulp is superior.

"The low price at which the United States are dumping their paper on England is interfering very much with the English paper mills, and consequently with our import of Canadian pulp, so that the Americans are getting your wood, and with the manufactured paper, spoiling your English demand for pulp. We have to bring the pulp over with fifty per cent water, so that the cost of freight on the extra ton of water to each ton of pulp enables the States (by shipping paper and saving this extra freight and the cost of pressing the pulp) to ruin the English mills, and consequently stop the demand for Canadian pulp. There is a grand future in our paper and pulp trade for Canada if she does not allow the States to deprive her of the full benefit of the value of her forests."

Below will be found an extract from another letter from a gentleman who recently went to Canada to inquire into the possibility of developing a trade in paper between the Dominion and the United Kingdom :

"I must confess I was somewhat disappointed to find so few manufacturers alive to the great possibilities of a trade with this country. As a matter of fact, I found only one company making any serious and adequate efforts to meet the needs of the market. They see clearly the probabilities of a great trade, and are building very fine mills and erecting machinery capable of a large turn-out in both pulp and paper suitable for England and the continent. I am quite certain, after seeing for myself the vast timber tracts and water resources of the eastern provinces, that Canada need fear no rival so long as wood remains the cheapest material for paper making, and it is certainly a pity that the States are allowed to deplete her best forests for the benefit of paper makers outside of Canada, where, despite the low prices of certain grades of paper here, she could secure good profits and give employment to large bodies of workmen by manufacturing pulp and paper on a large scale herself.

"For the successful achievement of the ends in view, it is necessary that paper and pulp should be easily shipped at Canadian ports all the year round to all the chief English and continental ports. Mills and paper buyers situated in Scotland want pulp or paper shipped direct to nearest ports, and so all over the country. With a new trade especially, all should be done that possibly can be to induce custom.

"London and Liverpool are fairly well looked after, even in winter, from St. John, but I have so far found it very difficult to get a quotation for freights from St. John in winter and Montreal in summer to Newcastle, Glasgow, Leith, Dundee or Cardiff. All these are large pulp and paper using centres readily reached from American ports, but not in direct touch to any appreciable extent with Canada. If something could be done to arrange for regular sailings between Canada and these ports, business would be materially helped.

The following is another letter that has reached me from a consumer of wood pulp :

"We beg to say that we have done a fairly large business in Canadian wood pulp. Large contracts have been made with some of the United States pulp mills, but we find that as soon as trade looks up in the latter country they do not carry out their arrangements as to delivery. So far we have not had this difficulty with the Canadian contracts, and for this reason we are anxious to encourage the Canadian business. We understand that an immense quantity of wood for pulp making purposes is sent from Canada to the United States, and that several attempts have been made to put a duty on it. If this were done, we are strongly of opinion that it would encourage the wood pulp making industry in Canada and foster the trade between that country and our own."

## PULP NOTES.

The capacity of the Dominion Pulp Company's mill at Chatham, N.B., is to be doubled, so that it will within a short time turn out 30 tons of pulp per day.

The Tobique Manufacturiug Company has been granted incorporation, to do a lumbering and pulp business on the Tobique river, in New Brunswick. Fred. A. Hale, M. P., and Hon. John Costigan are interested.

What is expected to prove an important factor in the building up of Canada's export pulp trade is the line of steamships which a company has been formed to put on the route between Manchester and certain ports designated in this country. Manchester is proving a most promising market for Canadian pulp exporters.

The Grand Falls Power Company, which is composed of Senator Proctor, of Vermont, Mr. James Manchester, Mr. G. F. Baird and Col. H. H. McLean, of St. John, N. B., purpose commencing the development of the power of the Grand Falls at an early date. The plans of the company include the construction of a large canal to develop 80,000 horse power, and the erection of extensive paper and pulp mills. The work to be carried on immediately will necessitate an expenditure of $1,000,000, but the whole work will require a capital of more than double that amount.

N. P. Tanguay has bought the saw mill of R. H. Cross at Weedon, Que., and will replace the steam power by electricity.

Messrs. B. R. Mowry & Son, of Gravenhurst, Ont., are now manufacturing the Automatic band saw sharpener. This machine is built on a new principle, insuring uniformity of teeth, and being positive in its action. This is said to be the great failing of many other machines. Saw mill men should give this new sharpener a trial.

No matter in what port of the Dominion you are situated, an expression of your views on any subject relative to the lumber trade is solicited by the publisher of this journal. No reader should wait for a personal invitation. Assistance thus rendered, as well as suggestions for making this journal more valuable to subscribers, will be much appreciated.

It seems that Commodore Dewey, the hero of Manilla, was once a lumberman. When a young man he was employed by Dewey, Palmer & Co., a wealthy New York firm, to establish stave factories in Ohio, and while thus engaged he located the little town of Deweyville. The Mr. Dewey of the firm named is said to have been an uncle of the admiral. Whatever may have been the success of the gallant Dewey as a stave manufacturer, it is certain that he has made a staving good naval officer, and moreover, has coopered the enemy tight as a barrel, and hooped it to the Spanish war vessels in great style, says a correspondent.

## OVER THE TREE TOPS.

In these years of advanced engineering, railways have sought and conquered many remarkable places, says the Philadelphia Press. Here we can ride up and down mountains just as if they were little hills, and hurry along the brink of gorges that make us shiver when we look down. From California, however, comes the strangest railroad story and picture for a long time. It tells and shows a train that actually runs over tree tops.

What a singular sensation it must be to realize that one is following a fuming, spitting locomotive over the very places where kind nature intended birds should rest, and that delightful quiet found among dense foliage reigns supreme. This railroad, down in Sonama County, California, between the Clipper mills and Stewart Point, is not exactly a passenger, but is a railroad in every sense of the word.

It so happens that when the railroad comes to a place about equi-distant from the two points mentioned, a huge ravine is encountered, the side and bottom of which are heavily wooded, two giant redwood monarchs of the forest towering far above the less pretentious growth and imparting an air of almost regal impressiveness.

Now, it was very necessary that the railroad should cross this ravine. It was also true that the building of a regulation railroad bridge would hardly pay. And this is where real genius came to the rescue. If the reader could stand either at the edge of this ravine or on one of its sloping sides, he would see that strangely enough the growth of the trees and their position is such that their tops can be cut off and an almost level surface of stumps be secured.

This is what genius saw, and hence the railroad across the tree tops. In the first place, the big redwoods were sawed off 75 feet from the ground, this being the exact height from the bottom of the ravine to the level of the tops of the trees. Next, trees on either side were sawed off of sufficient length to render their tops in a direct line with the tops of the redwoods, as well as of the edges of the banks.

In this fashion was nature made to provide the piers and superstructure of the desired bridge. To the lumbermen, even the California veterans, the project seemed almost chimerical, but the builders pushed ahead, and presently one day with a shout of triumph a little logging engine pulled four flat cars and a caboose over the tree tops.

**FELTS FOR PULP MILLS** 20 years in the business — the first to make Felts in Canada; capacity 1,000 lbs. per day. All our Felts are woven endless, without a splice. Our Felts will last longer and make dryer Pulp. All up-to-date mills use our Felts. New mills, when in need, write for samples and prices.

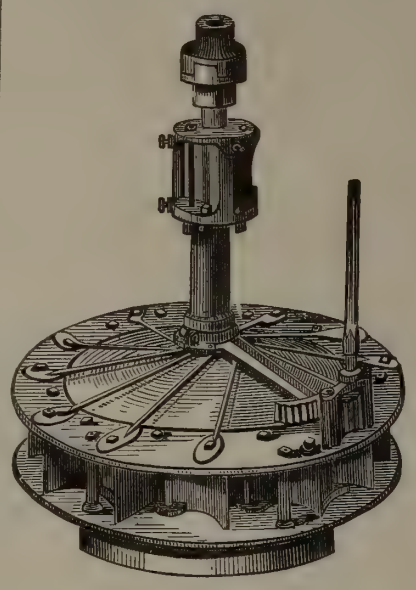
Readers are asked to contribute freely to the columns of the CANADA LUMBERMAN, and to send in items of news whenever possible. Let each subscriber resolve to report the news of his locality, such as changes of ownership, mill improvements, market conditions, etc., and the whole will comprise a valuable compendium of information.

The most extraordinary forest in the world is one discovered by Dr. Welwitsch, which occupies a table land some six miles broad, at a height of 300 feet or 400 feet above the sea, near the west coast of Africa. The trunks of the trees of this peculiar forest are four feet in diameter, and yet they only attain a height of 1 foot, giving the tree the appearance of a round table. There are never more than two leaves, which attain a length of 6 feet and a breadth of 2 feet, the flowers forming crimson clusters.



IT is well to think before putting in a Turbine, so that you think in the right direction. But don't think too long. Don't expect your stream to do high duty at low water mark with anything but the best Turbine to be had. That means

# WATEROUS, BRANTFORD, CANADA

# R. H. SMITH CO., LIMITED

## St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as they are cheaper, and in regard to working qualities are all that is needed.

Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

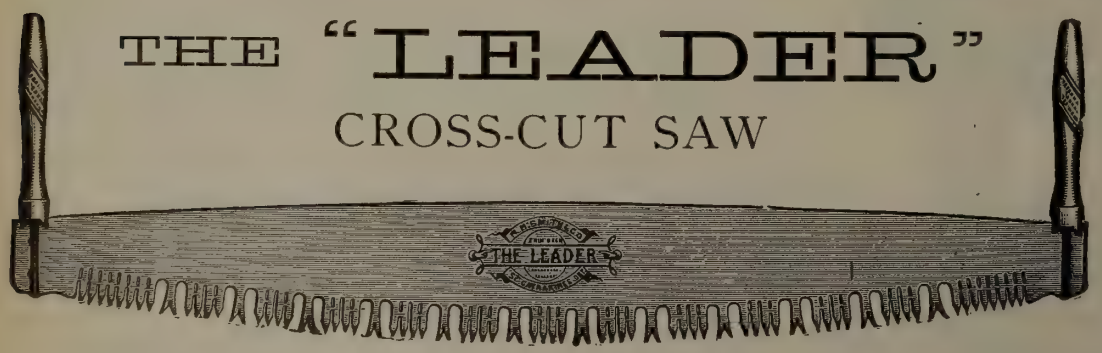
R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws.

Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as ew one. W.G.S.

## THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

## THE "LEADER" SAW SWAGE

**Made in 3 Sizes—$2.00, $2.50, $3.00 Net.**

## MODERN LUMBER DRIERS

The dry kiln of to-day is born of the desire of manufacturers of lumber to make a short cut from the tree to the consumer. Much thought has been devoted to the subject of drying lumber quickly; many theories have been advanced, and some degree of success, in many instances, attained. In one instance only, however, has absolute, unqualified correctness of theory been demonstrated in actual, every-day practice. Success has crowned our efforts, and

## The Standard Improved Compression Dry Kiln

Stands **alone** to-day, the embodiment of the **only** correct principle of drying green lumber artificially. It is the **only** kiln which will dry **every board** from the top course to the bottom, and from the sides to the centre of the pile, **quickly, thoroughly** and **evenly,** leaving them bright, straight and stainless—perfect lumber.

This is the **only** kiln in which heavy, cast-iron headers, and "made-to-order" pipes and fittings are used. They cost more than the common kind, and are worth more, but are none too good for the "Standard," in which every inch of material and every detail of construction is of the most exacting quality.

**Moist Heat,** absolutely controlled in every part of the drying room, is the drying agent employed in this kiln.

Elaborate, illustrated Catalog for the asking.

## REMINISCENCES OF THE LUMBER TRADE.

THE following historical notes on the early lumber trade of Canada were written by Hon. J. K. Ward, of Montreal, who is now 79 years of age, and who has spent 53 years of his life in the sawmilling business. He was one of the pioneers of the trade, having done much to develop the lumber industry of Canada.

Mr. Ward is about to retire from active business. He has disposed of his timber limits on the Rouge river to the Riordan Paper Mills Company, and after the present season will lease or sell his mill property.

### HISTORICAL NOTES.

The first timber shipped from Canada of which we have any record was sent by Talon to Larochelle in 1667. Hocquast sent some timber and sawed lumber to Rochefort in 1735. After the conquest in 1760 the trade with Britain increased very rapidly, so much so that as many as 800 sailing ships have arrived in one year at Quebec, seeking timber cargoes. At present it is a rarity to see one, steamships almost monopolizing the trade, the character of which has changed, much less square timber being made than formerly and most of the sawed pine lumber that comes from the Ottawa being shipped from Montreal, in place of Quebec, as was once the case.

I think I can fairly claim the credit of shipping the first cargo of lumber from the St. Lawrence to South America; this was in 1866, from Three Rivers, on the bark Annie McKenzie, on account of A. & S. V. Spring, of Portland, Maine, for Buenos Ayres. I continued for many years shipping lumber to the east and west side of South America, for German and American firms, also sending many ship loads of sugar box shooks to Havana and Cardenas. The trade with South America has been a very precarious one. I have known as much as $28 per 1000 feet being paid for freight to Buenos Ayres, and have seen as low as $9 per M feet paid for same. Cargoes have also been sold for less than the charges, and abandoned by the owners.

In the early part of the present century the Montmorency mills were built by a Mr. Usborne. The late Peter Paterson, a Yorkshire man, ship's carpenter by trade, who had spent some time in Russia, became an employee of Mr. Usborne's, and finally proprietor of the property, and became one of the largest manufacturers of lumber in Canada, drawing his supply of logs largely from the Beconcour, the St. Maurice and other streams running into the St. Lawrence and Ottawa rivers.

Sir John Caldwell was largely interested in lumbering on the St. John, N.B., Rivier du Loup in Batiscan and Etchemin, but did not make a success of it financially.

The late Wm. Price, father of the Hon. J. Price, of Quebec, established mills at Chicoutimi, St. Alexis, L'Anse St. Jean, St. Ettiene, on the Saguenay, Metis, Matane, St. Thomas, Batiscan and many other places, leaving an immense business to his sons, but all is now conducted by the one above named, the others having died some years ago.

Philomene Wright, the first lumberman on the Ottawa river, came from Woburn, in the United States, arrived at the Chaudiere Falls—or the Asticou, as called by the Indians—as early as the year 1796. It was not until 1797 that he finally decided to make his home in Canada, and on the 20th of October, 1789, he and two companions pitched upon the site of the future city of Hull. He finally quitted Woburn for Canada on the 2nd of February, 1800. He was accompanied by five families, and had in the train fourteen horses, eight oxen and seven sleighs. The first tree was felled on the site of the homestead on the 7th of March of the same year. He brought the first square timber from the Ottawa to Quebec in the year 1807. He built the first slide on the Hull side of the river in 1829. He was elected the first member to represent the County of Ottawa in 1830. He died in 1839, and sleeps, an honored memory, in the little cemetery on the Aylmer road. Philomene Wright built his first saw and grist mills 1808, they were, unfortunately, burned down, but were rebuilt in 60 days.

About eighteen years prior to this the first saw mill on the Ottawa had been built at Point Fortune by a Mr. Story. It boasted one upright saw, and it is recorded that when the man in charge gigged back the carriage for a fresh cut he would sit down on the log to take his dinner, and was about through by the time the cut was finished. With our present saws the same can be done in four seconds.

Among our successful lumbermen have been the late James McLaren, of Buckingham; Peter McLaren, of Perth; Bronson, Weston & Co., Perley & Pattee, J. R. Booth, Alex. Fraser, of Westmeath; W. Mackey and the late firm of Hamilton Bros., whose father was one of the first in the trade at Hawkesbury, Ont. Many others have taken an active part in the business, with more or less success.

Our shantymen, whether English or French, as a rule are as good axemen, as expert drivers and canoemen, as can be found in any country. Our people are well up in dam building, as well as in making slides and clearing away the rivers to facilitate driving. Our rivers, as a general thing, being very precipitous and rapid, require extensive improvements, especially for the running of square timber.

Mr. Hale, of Sherbrooke, gave an amusing history of a stick at the Forestry Congress in this city in 1882; "As an example of the far-reaching benefit of arboriculture, I will give the history of probably the first importation of any new variety of tree ever made into the eastern townships. Many years ago a 'solitary horseman might have been seen wending his way' from the central part of Vermont, bearing in his hand a riding stick broken from a tree as he left his home. His destination was Lennoxville, and in due course of time he arrived, and taking up his abode at a farmhouse about one mile east of the village, stuck his now useless switch into the ground. Like Aaron's rod, in due time it budded and grew apace—a scion of the then unknown white willow. From this little stranger have come all the original magnificent trees for which Lennoxville and the surrounding country have been so long and so justly famous, and which have done so much towards clothing the countryside for miles around with its rich and luxuriant foliage; into many other towns and villages have they spread, until the offsprings of this embryotic willow might be numbered by the thousands."

The late Hon. Jas. Skead and his brother, Robert, were prominent lumbermen and respected citizens in their day. Ben. McConnell and his brother and many others, were all pioneers in a business that entails more hardships and excitement than but few can appreciate.

## THE LATE TIMOTHY H. DUNN.

ONE of the oldest and most highly respected lumberman of Quebec recently crossed the bar, in the person of the late Mr. T. H. Dunn, whose death occurred at his summer home on the Isle of Orleans. Deceased was born at St. Ursule, Que., in 1816. In 1841 he entered the Quebec office of the great timber firm of Calvin, Cook & Counter, of Kingston, and later on became the head of the firm of Dunn, Calvin & Co. After the dissolution of that firm his business ability and success won the confidence of all those connected with the trade, and in conjunction with the late Thomas Benson, he transacted business under the name of T. H. Dunn & Co., and in 1860 formed a new partnership with the late Wm. Home, the firm being known as Dunn & Home. The firm was succeeded by his two sons, the late Logie H. Dunn and Stuart H. Dunn, under the name of Dunn & Co. He was also one of the founders of St. Mary's chapel and parsonage at the Island of Orleans, and for many years was a prominent member of the Quebec Board of Trade. Mr. Dunn was always foremost in identifying himself with all local enterprises. He was one of the original promoters of the Montmorency Electric Power Co., the Cold Storage Co., also the Quebec District Railway, and was a director of the two former companies, also of the Great Northern Railway, and always looked forward to seeing the entering of the Parry Sound into Quebec. He was a director at one time of the Quebec Bank, and at the time of his death was a new director of the Merchants' Bank of Canada, Montreal, and the Standard Drain Pipe Co., of St. Johns, P.Q. He was altogether an exemplary type of man, and leaves behind a cherished memory.

## ESTIMATING STANDING TIMBER.

A SUBSCRIBER of the Lumberman asks me to give him some advice about estimating standing timber. He states that his firm has occasionally a case where knowledge of the subject would be valuable to them, but "never to such an extent as to justify the employment of an expert timber estimator." He requested that I should state, "in a few short sentences," some rules for his guidance in such cases, writes "An Old Estimator" in the Northwestern Lumberman.

It is well to say at the outset that no intelligible advice can be given in any "few short sentences," for the art of estimating standing timber involves so many different questions that it is impossible to give any kind of an explanation that would be of any practical benefit, except by means of a somewhat lengthy communication.

No two estimators follow exactly the same methods, and I can only undertake to give as concise an idea of my own as possible. I would state further that these methods were learned from association with practical estimators of long and varied experience, whose estimates had been carefully checked up when the timber was cut and manufactured.

I spent a great amount of time in the woods years ago, learning the business with those men, and afterward in making estimates on my own account, on which large tracts of timber land changed hands, and I have yet to learn that any of my estimates were ever disputed.

As I learned the business of timber estimating, I formulated for myself a sort of system, which may be outlined briefly as follows, leaving out many of the minor details, which one in the business must learn to fit special conditions :

When undertaking to estimate the timber on a given tract, my first work, after establishing a headquarters camp on the land or near by, was to carefully go around its entire boundaries and make an outline map on a blank with which I was always provided. On it were laid out townships, sections, quarters and eighths, with the numbers and fractions to be filled up as required; hills, valleys, streams, etc., to be drawn in as found by actual examination. After outlining the body of timber I made careful notes of the lay of the land on each and every side, and the character of the standing timber closely adjoining it.

My next move was always to carefully cross and recross the tract in every direction, making my lines of crossing so near that I could observe correctly the kind and character of the timber between the lines I made, and also to observe the character of the ground, its actual topography, the hills, valleys and streams which crossed it. I made these preliminary explorations in both directions, practically marking the tract off like a checker board, making copious notes as I went. By this means I got a general photograph in my mind of the appearance of the entire tract.

My next move was to go over the ground carefully, pacing distances closely, following the compass always, and sometimes using the surveyor's chain where especial exactness was required, and from these second explorations I filled in as perfect a topographical map as could be made, showing every stream, if there were any, in its actual position, its comparative size, and any branches that it might have, also in actual position. Every hill or elevation, and every valley was drawn exactly, though roughly, of course, but so as to allow all the difficulties in the way of getting out the timber, and the direction in which it would have to be hauled to get it to a stream, or railroad, or any other landing. It often happened that a copy of this topographical map would go a long way toward determining the cost of logging the tract, which, in its turn, would have a great bearing upon the value of the timber.

After making my map my next step was usually to divide the tract into smaller ones, according to the size of the whole, the density of the timber, and the roughness or smoothness of the ground, rough ground or dense timber requiring smaller divisions. These divisions were made by careful pacing and by blazing the lines, or by otherwise marking them, where there is much underbrush, by cutting enough to mark paths. My next step was to take one of these small subdivisions, go carefully over it, count the number of trees on an average acre, or two or more acres, from which to draw an average. At first I used a tape measure to obtain the girth of trees, which once obtained, with a careful estimate of the height, would give me a scale by any of the commonly used log rules, mentally cutting the tree into logs of merchantable length, and lowering the scale, which any scaler will understand, from the butt log up, as is done in measuring long logs.

Where the land was thinly timbered and there were but one or two species, it was an easy matter to determine the amount of timber of each species in each subdivision, and when the first examination has discovered little variation in the quality of the timber over different parts of the tract, it will usually only be necessary to estimate two or three of these small subdivisions to be sure of a fair average, when a total can be struck. But where, as in the case of hardwoods, there may be a number of species unevenly distributed, and where the land is unevenly forested, no accurate estimate can be obtained without going over every one of the subdivisions as a unit, carefully classifying the quality of the timber of each species and the proportion of each species in each subdivision.

When I had this work all done, if especial accuracy was required and the timber much mixed, and the quality variable under different sections of the tract, I usually retraced my work of actual estimating, with my first figures in my pocket, not to be referred to until the second estimate was complete. I aimed to allow a little time to elapse between the making of these two estimates, as the mind will often work differently under reversed conditions of looking at things.

After a few years' experience in the business, and having my mind well filled with pictures of different tracts I had estimated, and of the amount of timber found on each, always bearing in mind also the results of cutting and sawing on the same tracts, and the comparison of the mill scales with my estimates, I was enabled to make very close estimates of large tracts, after my topographical map was once made, and after what I might call my preliminary explorations, perhaps repeated once or twice, without any actual counting, or actual measuring of individual trees, simply passing over the different squares of the checkerboard, as I may express it, and comparing them in my mind with pictures of other tracts, the actual figures of which I had at hand.

I was enabled, during the last years of my experience in the woods as an estimator, to make very accurate estimates on this basis, but I would not recommend it as safe for anyone but a long-time expert or one specially endowed with a natural gift for estimating things by sight.

That there is a gift in this line I must claim, for I have known men to work in the woods for years, under good instructors, and who were honest and conscientious, but who never became reliable estimators. On the other hand, I have known men who seemed to be able to estimate almost by intuition. They really had no special system, but outlined the tract they were estimating, and then walked over it back and forth until they had a fixed idea in their minds of the amount, character and species of timber on the land, and I am free to confess that these men habitually made remarkably close estimates.

I believe it is a rule with all professional land-lookers or timber estimators to make some sort of a topographical map at some stage of the proceedings, some preferring to leave it until the very last. I always found the making of the map at the outset a decided help in reaching accurate conclusions as to the quantity and character of the timber on the different parts of the tract.

These rules, or suggestions, whatever the reader may be pleased to call them, apply to all kinds of timber, with certain modifications, of course. In the hardwoods it is necessary for the estimator not only to be able to scale the trees and get their contents, but to know the natural defects, whether on the surface, or apparent only by certain external signs. He should also know something of the effects of different soils and surface upon the quality of the growing timber. Without such knowledge, any estimate he may make would practically only be a gross one of scale of the timber sawed through and through. In the general run of hardwood timber such a gross estimate should be scaled down say from 25 to 40 per cent. in order not to overrun a subsequent mill tally.

It is quite an easy matter to estimate white pine on ordinary level dry pine land. But where the land is interspersed with streams with marshy borders, with swampy or boggy places, clayey hillsides, or cobbly ridges, it requires all the skill of the most wideawake man in the business to avoid making the most glaring mistakes, at least in the quality of the timber.

In the hardwoods, where the prevailing timber is white or red oak, and the land is of a generally uniform soil, and is high and dry, the work is quite easy, and there should be little or no trouble in making an almost absolutely accurate estimate of what the tract would cut in board feet. But where the land is rolling, with variable soil, as has been said of pine land, and the oak is only one of several prevailing species, there is more difficulty, and more skill is required.

I might say in conclusion that the business of timber estimating is one that cannot be learned from any book, or by any mere theoretical instruction, but preferably under a well posted teacher, and in actual field work. It is all right

to have a theory at one's tongue's end beforehand, and to have some system outlined to follow, but the real education of the timber estimator can only be obtained by actual work in the woods. Such education can be obtained without the aid of an instructor, but probably at the expense of many mistakes in regard to the quality of the timber, and at the expense of many wild guesses as to quantity.

I would say further that anyone intending to purchase any considerable tract of timber, unless well conversant with land looking and timber estimating himself, had better pay a practical estimator for his services than to undertake to estimate the timber for himself, even after carefully reading and digesting the rules I have here laid down. More purchasers have been fooled by confidence in their own ability to make an estimate of timber than would fill a page of this paper if their names were printed in the finest solid type. I am out of the business, and have no interest it it whatever, but I would say to any prospective investor in timber land, who proposes to take these rules, or any other estimator's rules (and these I affirm are as good as can be drawn up) don't do it, but hire some well known, trustworthy landlooker or estimator to do the work for you. It will be money in your pocket in the end.

## QUESTIONING THE SPRUCES.

Austin Cary, forestry specialist for the United States Department of Agriculture, believes that spruces, growing under average conditions, make an annual increase of 2.3 to 3 per cent. It is evident that, in reaching this conclusion, Mr. Cary has left nothing to guesswork. He has spent nearly two years in the woods of New Hampshire and Maine, during which time he and his assistants measured more than 10,000 individual spruce logs and trees, says "Popular Science News."

While the figures thus obtained are not encouraging to men who have bought townships of young spruce for permanent investments, they afford a most potent argument in favor of scientific forest culture. During the first twenty years in the life of a young tree the growth is rapid; but as soon as the stems get big enough to be of value as poles or pulp wood, and long before they are worth cutting for timber, the per cent. of increase drops to a low figure, and holds there during the life of the forest. In dense growths, where the trees run up tall and slim in order to push their tops to the light and air, fully seventy-five per cent. perish in the struggle for existence, and stand there, while they undergo a slow decay, greatly impeding the development of living trees.

Under the present system of management, which is simply nature's way of doing things, the Northern spruces are not big enough to make mill logs until they are 100 to 120 years of age. During the time of growth ninety-five per cent. of the original seedlings have been killed from suffocation or inadequate nutrition, and about seventy-five per cent. of the wood—counted in board or cubic measure—has gone to waste from decay. In choppings that were culled for the best logs twenty and thirty years ago Mr. Cary found that the surviving trees had grown four, six, and sometimes ten per cent. a year, owing to the thinning.

Hence it is argued that if the landowners who are now stripping off their young spruces for pulp wood were to thin out the growths, leaving the tallest and best to grow for logs, they would get nearly as much as they do now for pulp, and still have their timber land in better condition for logs than it was before the weeding out was made. Owing to the danger from winds, no lot should be entirely thinned in one season; but the work must be done gradually, so as to enable the surviving trees to withstand the gales.

Now that spruce is gone from all the waterways and the lumbermen are pushing private railroads among the mountains to reach what still remains, the owners have learned that, by following Mr. Cary's advice they may make their townships yield good incomes from pulp wood and at the same time enhance the coming values of the trees that are left to stand. It is a case where a man may eat his cake and still keep it to eat at some future time. When it is remembered that nearly all the white paper now used is made from spruce pulp, and that about three-fourths of spruce growth in New England has been swept away during the past fifteen years, it would seem that it was time for the landowners to show some interest in what concerns them so much.

## PRICES AND TERMS OF FOREIGN MARKETS.

A LUMBERMAN correspondent states that he has been quoted offers on American lumber to be delivered in European ports, at so many francs per cubic meter, and he wishes to know how to find out the value of this offer in English, in other words, in Yankee board measure and Yankee dollars and cents, says the Hardwood Record.

The French meter is 39.37 inches in length. This cubed, or multiplied into itself twice equals 61,023.37 inches, which divided by 1728, the number of cubic inches in a cubic foot English measure, gives 35.51 cubic feet, or 35.3, which is near enough for all practical purposes. Multiply this by 12 and it gives 423.75 feet board measure in a cubic meter, or 424 feet in round numbers, which is the amount used in ordinary commercial transactions of American exporters. They use this as an equivalent of the French cubic meter.

To reach the number of feet, board measure, in any number of cubic meters, therefore, simply multiply the number of cubic meters by 424, which is near enough for accuracy except in very large amounts, when 423¾ feet is almost the exact equivalent, the fraction lost being infinitesimal.

The French franc equals 19 cents and a very small fraction. It is ordinarily computed roughly at 20 cents, American money, although 19 cents is usually the nearer. The value of the franc is fixed periodically by the Treasury Department at Washington, but its fluctuations are in very small fractions of a cent, seldom reaching quite as high as 20 cents under any ordinary circumstances.

There are various terms used in connection with the shipment of lumber to Europe, which are somewhat enigmatical to the average shipper. For instance, the correspondent mentioned states that he has the offer of so many francs per cubic meter for cottonwood, delivered C. I. F. These calibilistic letters C. I. F. are somewhat of the nature of our letters F. O. B., and mean simply cost, insurance and freight, or, in other words, that the lumber is to be delivered at the European port for so many francs per cubic foot, including original cost, insurance and all freight charges. Shippers are advised to be careful about signing contracts including anything more than the letters C. F., as the question of insurance is not always a readily known quantity and certain restrictions should be placed upon the scope of the word freight, as, for instance, whether it should include freight from the mill to the seaboard and the straight ocean freight only, or whether it should include charges that might occur from moving the lumber from really the exterior port of delivery to some exterior point, as through the Kiel or Manchester canals. These minor things ought to be well understood by the shipper before signing a contract with all these calibilistic letters and provisos.

To reduce any number of feet, board measure, to cubic meters, divide the amount by 424, number of feet, board measure, in a cubic meter, and vice versa. To reduce American money to francs reduce it to cents and divide by 19½, which will be near enough for practical purposes.

Another correspondent inquires with regard to certain English measurements which have been explained several times in the Record and other lumber papers, but it will do no harm to explain them briefly again. In English measurement a "load" is 50 cubic feet, or 600 feet board measure. This is a term quite commonly used in the English timber trade. The term "standard" is probably used more often, and it means what is commonly termed the St. Petersburg standard, which is equal to 1,980 feet, board measure. The Irish standard is sometimes used, but not often, and it is equivalent to 3,240 feet, board measure. When this latter is used it is sufficiently designated, and there is seldom any chance for a mistake as to which is which, for unless otherwise specified the term "standard" means St. Petersburg standard of 1,980 feet.

The whole timber and lumber business in England is carried on in a regular old podauger fashion, and it is a wonder the English people do not rebel and adopt some more common-sense system of measuring lumber, and in connection with it, some more common-sense coinage, or rather, a more common-sense money system. Both systems, the measurement of timber or lumber, and the denominations of currency, are cumbersome, inconvenient and provincial. The only common-sense system for either is a decimal one, and many of the English people are already of that opinion. There is no reason why a decimal money system should not have been adopted years ago, as well as the decimal system for the measurement of timber, except the one reason which the Englishman usually gives, a dislike to change, and perhaps a dislike also to concede anything to the notions or wishes of other nations with whom the English people do business.

The Winnipeg branch of the Waterous Engine Works Co. have supplied a saw-mill and shingle mill plant to the Indian Department, to be set up at the Edmonton Indian Agency. The Shuswup Milling Co., of Kamloops, B.C., have purchased a new boiler for their saw-mill from the same company.

One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## UNIFORM INSPECTION RULES WANTED.

MORE than once we have pointed out in this journal the necessity of the lumber trade of Canada adopting some uniform system for the grading of lumber, and it affords us at least some satisfaction to learn that the movement in favor of so doing is spreading. A faint hope may be indulged that at some time in the future there will be inaugurated a system of classifying lumber which will be recognized by the trade as the standard.

Even in the Ottawa valley, where the trade is known to be very conservative, there is quite a strong feeling in favor of standard inspection. True, the foremost advocates are the dealers, the large manufacturers having conducted their business along the one line for so many years as to be loath to court any change; but it is not believed that they would offer any opposition, but would gradually fall into line.

That we have no proper inspection rules does not speak well for the Canadian lumber trade. Every centre in the United States has a set of rules upon which the business is transacted, and now an effort is being made by the hardwood lumbermen to secure the adoption of a national inspection for hardwoods. The movement has so far met with success, although some difficulty has been experienced in deciding upon the rules which would serve all the markets to the best advantage.

The question may be asked why some steps have not been taken in this direction in Canada. One reason is that our lumbermen have depended too much upon the United States inspection. Indifference and lack of organization may be cited as another cause. Now that we have an association of lumbermen in Ontario, let this question be brought forward and carried to its ultimate conclusion. We feel free to state that, among our hardwood mill men and dealers at least, there is no lack of appreciation of the necessity of taking action to secure the adoption of standard rules. The trade realize the benefits to be derived therefrom, and if an earnest move was made in the matter it would surely receive a hearty support.

## LABOR IN SAW MILLS.

THE recent strike of workmen in some of the saw mills of the Ottawa valley has, perhaps, created an impression in the minds of the public hat employees of lumbermen are subject to extraordinary hardships, and that they receive from their employers very unfair treatment. Certainly only circumstances such as these should cause a general uprising of workmen against the person or persons who, by their enterprise, are furnishing necessary employment to hundreds of men. But unfortunately, these disturbances are too often the result of thoughtless agitation by a few individuals who pose as friends of the laboring man, and give little or no consideration to the justice of their demands. Many men are thus forced to become identified with strikes against the dictates of their own consciences.

That saw mill hands are underpaid is not generally believed by those who have a knowledge of the lumbering industry and know the inner working of the business. The question of wages will always be governed by the law of supply and demand, and cannot be fixed by labor organizations.

We believe that the misapprehension exists in the minds of many, and particularly mill employees, that immense profits have been and are being made by saw mill owners. Because large industries have been established, the inference is drawn that the business is a particularly remunerative one, and that the proprietors have accumulated great personal wealth. Generally, this is not true. Considering the amount of capital invested, the profits in the saw milling business are no greater, if as great, as in other lines of industry. Indeed, we could point to numerous instances in which the promoters of saw milling enterprises have suffered the total destruction of their capital, owing to the precarious nature of the trade. It is admitted that by speculation in timber limits considerable sums of money have been made, but in the process of sawing and marketing lumber the profits have been none too substantial. Heavy losses have been met with by many lumbermen in late years, owing to the general depression in the trade. These losses may have rendered a reduction in wages necessary, in order that the business might be continued, and in this the workmen should feel iointly interested with the proprietors.

In comparison with earlier years, the position of men working in saw mills is much improved. Their remuneration is quite as great, while the ten-hour day has been adopted almost universally. When working eleven hours per day, they are paid for the extra hour.

It is very desirable that employers and employees should work in harmony; otherwise the interests of both are likely to suffer. The usual result of strikes is anything but favorable to the participants, hence this method of securing a settlement of difficulties should be discouraged.

## HARDWOOD FLOORS.

CANADIAN white maple, when properly seasoned, makes a good durable floor if care is taken in laying it, and placing it where it will not be exposed to damp, or likely to be soaked with water at any time. Where possible, the material used should be weather seasoned, as maple that has been kiln dried is apt to swell with the least possible moisture, such as being washed, or by absorbing the damp from newly plastered walls, and expands to such an extent that injury may result. Weather seasoned maple does not swell so readily nor so much when moist, and experience has proven that its lasting qualities are greater than when kiln dried. As of maple, so of black birch, that which is weather seasoned is, in many respects, better than when kiln dried. In weather seasoning maple, birch, cherry and beech, it should be so placed that neither rain or sun will get on it, as the first will be sure to doze it, while the second will crack, split or warp it. If intended for flooring, warping does not much matter, as it will be ripped into strips less than three inches in width, so that when it is run through the flooring machine the warping will be pretty well taken out of it. Beech makes a very handsome floor, and if used in a room where it is intended there will be no carpet, it may be waxed or polished, and will have a fine metallic lustre. Red beech, of course, is the wood intended. Cherry, while one of the handsomest of woods, is not very well adapted for flooring, as it is rather soft, and shoes with sharp angles, or having metal nails in them, would be apt to mark it if the floor was left bare and polished. Perhaps, after all, there is no wood grown in Canada that so well fills the requirements needed for a good floor as our white oak. This wood makes at once a handsome, durable and lasting floor; and if quarter sawn and wisely selected, is superior in appearance, when properly finished, to any other wood grown. A quartered oak floor, laid in a room where all the woodwork is quartered oak finished, is a sight that is sure to impress everyone who sees it with an idea of solidity and worth, that never obtains in the use of other woods. It is not a very good method to mix maple and birch together in the one floor. They do not last equally, neither do they wear equally, and when a floor wears out in one part, the whole of it must come up, the worn and the unworn, whereas, if it had been of one kind of material it would have worn evenly, and throughout. Another reprehensible custom is that of laying flooring in dark and light strips alternately. By so doing it gives the floor a sort of "cheap John" appearance, and every joint is so empha-

sized, that what would not be noticed if the boards were all of one color, will be sure to attract the eye when the joint is defined by a change of color. The flooring should be selected for color as well as for widths, and all that of one color should be laid together.

## EDITORIAL NOTES.

Reverting to the paragraph in our July issue concerning the relations between lumbermen and the Canadian railway companies, we desire to say a few words in explanation of our remarks. We do not contend that the lumbermen as a body complain of discourteous treatment from the railway companies, nor that they have ground for such complaint. There are instances, however, where friction has arisen between lumbermen and the railway companies, over the question of damages or other points in dispute, and where the former claim to have been treated unfairly, while, possibly, the railway authorities have acted according to their best judgment. It is very desirable that instances of this character should be reduced to the minimum, in order that no incentive may be given Canadian dealers to purchase lumber in the United States. Points upon which we believe the lumbermen agree collectively are that the freight rate on hardwoods should be made the same as that on pine, and that some sections are entitled to more favorable rates, as pointed out in our previous article.

Of the many improvements that have been made in saw mill machinery, few have attracted greater attention than the double-acting band saw which has been put in operation in a Minneapolis mill. For a number of years such a thing as a band saw that would cut upon the return as well as the forward movement has been known, but lumbermen have been inclined to doubt that it would ever prove a success in practical operation. Mr. F. S. Farr is one lumberman at least who does not hold this view, he having invented and tested such a saw with very satisfactory results. The saws used are fourteen inches wide and have teeth on both sides. In connection therewith, several new inventions have been added. A scheme has been worked out for the raising and lowering of the whole mechanism of a band mill, thus doing away with the guide, and by bringing the upper wheel down close to the log, the saw is made more rigid at that point. The live rolls have been extended back through the saw and along the lower edge of the log deck, while extended arms keep the log over the rolls on their way to the carriage. The setter on the carriage occupies a position on the other end, so that he can see the sawyer when the return trip is started. The inventor believes that he can saw one-third more lumber than by an ordinary single band saw.

Certain lumbermen in the state of Maine are up in arms against the Treasury Department at Washington on account of a decision given in connection with the duty on lumber. The Dingley bill provides that lumber manufactured by American workmen in the province of New Brunswick, from logs obtained from the state of Maine and owned by American citizens, may be shipped back into the United States free of duty. This provision was made to protect the property of some United States lumbermen who have extensive saw mills at St. John, and who obtain their log supply from limits on the St. John and St. Croix rivers and their tributaries. Messrs. Stetson, Cutler & Co. are among these. Recently they imported from New Brunswick 12,000 feet of spruce scantling, planed on one edge, on which the collector at Boston levied a duty of two dollars per thousand feet as lumber, and in addition 50 cents per thousand feet for being planed on one side, under the provision of paragraph 195 of the act. The importers contended that this was unfair, and that if any duty was imposed on the lumber, it should only be for the planing of one edge. The decision was, however, upheld by the Treasury Department, the authorities pointing out that provision was made only for the free entry of sawed and hewed lumber. We fail to see from what standpoint the ruling could be called in question, as it is undoubtedly the correct interpretation of the tariff.

## SELECTION, HANDLING AND CARE OF BELTS.

Nearly every engineer of a saw mill has one or more belts under his care, and from the condition many of them are in it would seem that a word of advice as to their selection and care would not be amiss, writes Charles H. Garlick, in Lumber.

If, when in need of a belt, the engineer would, instead of simply ordering a certain number of feet of a certain width and thickness, try the experiment of personally selecting the same for the work which he wishes to have the belt do, and then use the same care in placing the belt in use that he does in starting any other piece of new work or new machine, much better results would be obtained than is usually the case. There are many, very many, rules and formulæ for ascertaining the width of belt necessary for transmitting a certain amount of power. No two of these rules agree, because there are so many conditions that enter into the problem that no hard and fast rule can be used.

From the writer's experience he prefers to use the following formula, which in ordinary cases will be found nearly correct :

$$W = \frac{\text{H.P.} \times 5{,}500}{\text{Velocity} \times \text{contact in feet.}}$$

This is single thickness. For double thickness belts :

$$W = \frac{\text{H.P.} \times 3{,}600}{\text{Velocity} \times \text{contact in feet.}}$$

Or the width of the belt can be found by multiplying horse power to be transmitted by 3,600, and dividing the product by the number of feet of the belt that will pass over the pulley per minute, multiplied by the number of feet of belt in contact with the driving pulley. A very good "rule of thumb" for single belts is : Belting 1 inch wide having a velocity of 600 feet per minute, will transmit 1 horse-power.

It should be borne in mind, however, that the width of the belt necessary to transmit a certain horse power depends on several conditions, one of which is the tension of the belt. When a belt is too tight there is a constant waste in journal friction, and when too loose a great loss in efficiency from "slip." A belt should be procured that will deliver the power required in a fairly slack condition.

Between a slow speed and a wide belt and high speed and a narrow belt, choose high speed and narrow belt wherever practicable, in designing for the transmission of power. A velocity of belt up to a mile a minute is practicable and advantageous.

In taking lengths for belts, where it is not convenient to measure with a tape-line the length required, this rule will be found of service : Add the diameters of the two pulleys together, divide the result by 2, and multiply the quotient by 3¼ ; add the product to twice the distance between the centres of shafting, and you have the length required, very nearly.

In buying, be sure that the leather is oak tanned, has a smooth, polished surface and a fine fiber. It is a good idea to have the belt unrolled and examine it to see that laps are thoroughly made and fastened. Note whether the belt is of the same uniform thickness throughout its entire length, also that the belt is pliable and not harsh and brittle. Note if possible whether the hides which make up the belts are of uniform thickness, or whether the thickness of belt is obtained by splitting the hides, and if the latter is the case reject it.

As to whether you purchase single or double belts, it may be said that single belts can be used successfully up to twelve or fourteen inches in width, but where more power is required than a belt of this width will transmit under the conditions that exist in your plant, belts of double thickness should be used. With single belts, care should be taken to have them of ample width, so that there need be no necessity of having them tight. Double belts should be used when a great strain is to be put on the leather, or for slow speed, or when a belt is to be run at one-fourth turn ; belts which you are called upon to shift frequently, or which are to run on vertical shafts, should be double.

As to the respective value of rubber or leather belts : Rubber belts do not cost as much as leather, nor do they, under favorable conditions, last as long. They cannot be used in places where the belt rubs, nor where it becomes necessary to shift often ; neither can they, as a rule, be run successfully as cross belts. They should not be used where oil is likely to drop on them, nor where they will freeze. They usually last longer than leather belts in damp localities. Rubber belts will adhere to pulleys better than leather. When a rubber belt commences to wear out it is almost impossible to do anything to repair it. Having purchased a new leather belt, it should, if time will permit, be stretched before being placed in work. This can be done in a variety of ways, depending on the width and length of belt and the time at the engineer's disposal. One way is to stretch it over two pulleys placed some distance apart, and attach weights to either end of the belt. During the stretching period a little oil should be applied to the leather.

Belting for electric lighting machinery must have some characteristics all its own. For ordinary machines a positive steady motion is not absolutely necessary, but with an electric plant it is different. It is necessary for the belt to be endless and of a uniform thickness. Even so small a thing as uneven laps will cause a slight but constant jumping or flickering of lamps. With most dynamos as built to-day provision is made for the purpose of taking up any stretch that may

occur in a properly-constructed, designed and well-stretched belt. Yet, should it become necessary to shorten one of these belts, it may be done by using clamps. Care should be taken and the laps made as long as possible, and sufficient time given the work before removing the clamps.

While endless belts are to be preferred for almost all work, yet in many places the time, care and experience required to join them is such that recourse is had to the more convenient method of lacing or fastening with clamps or hooks, and of all the different methods the writer has been more successful with and prefers lacing. But even such a simple piece of work as that of joining a belt by means of lace—a narrow strip of rawhide—is sometimes done in a manner to very materially reduce the life of the belt, and very seldom is sufficient time or care given to this work. The ends of the belts should be cut exactly square, using an ordinary tri-square for this purpose. Punch the holes exactly opposite each other in the two ends of the belt to be joined. It is best to use an oval punch for this purpose, the longest diameter of holes being parallel with the belt. Two rows of holes should be made in each end of the belt, the same being staggered. The edges of holes should all be at least seven-eighths of an inch from the end or side of belt ; be sure and keep the belt square, and lace both ends equally tight. The laces should not be crossed on the side that runs next to the pulley, but on that side laces should run parallel with the belt. Fig. 1 shows the inside

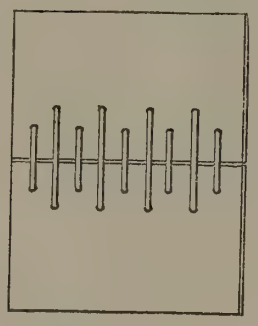

Fig. 1—Side of lacing running next to pulley.

of the lacing, or the side that should run next to the pulleys, and Fig. 2 shows the outside of the lacing, the side that is not in contact with the pulley.

In placing the belt on pulley, put it on so that pulley in slipping will run with, and not against, splice or joint. While authorities differ as to which side of the belt should be placed next to the pulley, the writer's experience has been that

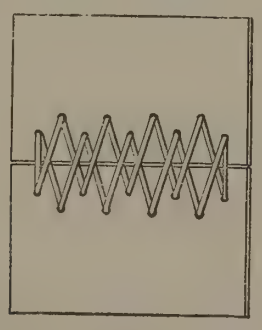

Fig. 2—Outside of lacing.

the best results are obtained when the grain side is placed next to the pulley. Experience has proven that it will drive more than when the flesh side is in contact with the pulley, and that the belt will last longer.

If the belt is to be crossed, do not put it on in such a manner that at the places of passing joints or laps will meet and be turned up and ruined in a short time.

How to place a belt on a pulley is one of the little things one can become an adept in only by practice. If the belt is a heavy one and the pulley runs at a high speed, it is best to slow down the machine, then place the belt on the loose pulley or the pulley at rest. Secure a firm footing, and with the right hand slowly work the belt up to top of pulley, when a quick jerk down or up, according to the direction the pulley is running, will throw the belt on. When the belt is heavy, or the operator lacks experience, it is best to shut off the power, place the belt on pulley as far as possible, then take a small leather belt, or even a rope, double it, slip one end through the arms of the pulley and around the belt and rim of the pulley, and the other end through the loop formed by the double of the small belt or rope ; then stand on the floor on the opposite side and draw on the small belt or rope, when the belt will be drawn to the rim of the pulley. When the machine is placed in motion, the belt may be slipped on without any trouble ; then, by letting go of the small belt or rope when the belt is on the pulley, the noose will be undone and the small belt will be free.

If the belt does not stay on the pulley, do not erect guards to keep it on, as they are an eyesore, and soon wear the belt out. Besides, the guards simply cure an effect, while the cause remains. The cause may be that the pulley is not in line, or that the belt is not joined squarely, or one side is stretched more than the other. Sometimes a belt running at high speed, transmitting scarcely any power, will wave from one side of the pulley to the other, and if a load is not thrown off will eventually come off. In places where it was not convenient to either put in pulleys of larger diameter, or even wider belts, and where the use of resin, oil and other adhesive matter would not cause the belt to adhere to the pulley, the difficulty has been overcome by running a narrow belt, drawn tightly, with ends laced, over the main belt. In one place where occurred a continual slipping of a ten-inch belt, the writer took an old two-inch belt, placed it upon the ten-inch, and the two belts carried the load for years without trouble.

## MACHINERY BEARINGS.

Any mechanic will inform you that the common plummer-block should be a little easy at the sides, and that the bearing should receive oil from the top. He seldom knows the reason for this rule, however, and though his ignorance does not prevent his mill shaft bearings running cool, not "knowing why" makes him experience trouble with many bearings not so simply loaded.

John Dewrance, in a paper on the subject, detailed experiments which ought to clear ideas and rectify erroneous practices.

Bearings were clamped upon a shaft so that the load upon its underside was this same clamping pressure, while on the top this was augmented by weight of brasses, clamps and springs.

An oil hole at the top refused entirely entry to oil, which could be given, however, at either side. The bearing—which ran fairly cool—ejected oil under a pressure of 2,300 lbs. per square inch through the upper oil hole. The bearing was then taken out and surface dressed in order to obtain still greater pressures ; but when replaced, instead of this great positive ejecting pressure, there was a suction at the upper oil hole measured by a vacuum gauge at thirty inches ; the whole still running cool and well. The blocks when taken out showed at first sight no explanation for so great a change in pressure, but close examination made the matter clear. The under side of the top brass at first was not quite flat, the central portion taking all the load ; this sprung the brass and ground the central part ; so, when replaced under diminished load, there was a vacant space around the oil hole, where formerly had been the greatest pressure.

In any bearing to run cool and well means that a film of oil keeps forcibly apart the sliding pieces. The total pressure on this oil must be the total load. The surface tension of the oil and capillarity alone provide the power the oil has to resist this pressure, therefore the pressure is the greatest where space between the surfaces is least. And since, moreover, oil is carried on by sliding, it follows that to keep up the supply the space must taper to the point of greatest pressure.

If we lay a flat plate on a well oiled shaft, and gauge the pressure at a hole drilled through it, as we approach the point of nearest contact pressure will rise, to fall again—and fall down below zero as we pass it.

Tapering spaces must then be provided in all our bearings of this class ; and oil supplied at that point where the load is least. The series of experiments referred to was first taken up in order to discover whether "brasses" of different metals differed in their capacity for bearing loads without increase or friction. As one might have anticipated, it was found that no such difference existed ; so long as a sufficient film of oil remains it matters little—in this connection—what the metals are. Given that they are strong and stiff enough the one great point is that the bearing should be softer than the shaft ; for then at times of failure in the oiling the shaft is coated with the scraped-off softer metal, more or less evenly around its surface. But if the shaft should be the softer of the two, its heaped-up scraping will accentuate local unevenness in the bearing.

The main point in the paper is, however, the light thrown on the simple point of oiling. In ordinary mill shaft plummer blocks this is done rightly from the top. At first our railway axle bearings were likewise—but wrongly—fed ; that fault was soon detected and set right ; but still mechanics' ignorance upon the subject causes much trouble with some engine bearings ; and since it is a fact that pressures over one ton per square inch can be endured by properly constructed brasses, while costly troubles are often caused by far less loads, the question certainly deserves attention until our errors are set right.

Mr. John McKay, representing the Standard Dry Kiln Co., of Indianapolis, Ind., paid a short visit to Canada recently, en route to his home in Boston. Mr. McKay knows pretty nearly all about lumber drying, and claims to represent the best apparatus on the market for that purpose. His company has recently made a number of large sales on the Pacific Coast, including British Columbia, in addition to filling orders for Russia and Mexico. Mr. McKay states that his company have received a large number of enquiries as a result of their advertisement in The Canada Lumbermen.

## THE BY-PRODUCTS OF SAW-MILLING.

The average operator of a saw-mill relies for his profit on the good timber he is able to turn out, says a writer in the Hardwood Record. He measures the chances of loss and gain wholly by the percentage of clear stock his logs will cut, and the price of such lumber in market. The mill culls are waste anyway, and if he gets within a moderate percentage of the cost of his common and shipping culls, he congratulates himself upon his closeness in figuring and economy in operating his mill. His profits necessarily depend on his ability to get enough from his high grade lumber to cover the greater part of the cost of his logs and all his profit.

It is not difficult to figure out something ahead in this, by assorting his lumber so that it will run well to good, but such liberality not uncommonly defeats itself, for when the stock gets into market, and is inspected under the buyer's severer construction of the rules, the unlucky shipper very likely finds that he has a heavy freight to pay on much of it that will not bring cost at the delivery point. More than one saw-mill enterprise that promised fairly enough in the beginning has landed the owner in bankruptcy because the timber would not make enough clear lumber to carry it. And are they not falling around us every day for a like reason !

This result is largely due in nearly every case to the neglect of the by-products of the saw-mill. Many mill operators look upon anything but lumber as unworthy their attention, and so they run everything that will not make boards or plank or dimension stock that is fit to ship into the conveyor and up the incline, to the slab pile or refuse burner.

Thousands—yes, millions — of dollars of as good profit as was ever made has been thrown away in this fashion, and few that lost it could tell where it had gone. They may know that they got back for their lumber less than the timber and sawing cost, and that their operation as a whole was a losing one, but they do not realize that the gain which would have served to turn the scale might readily have been made out of the stuff they burned up to get out of the way.

No saw-mill man can be said to have fully mastered his business until he has learned that every cent he is able to get out of stock that will not bear shipment, or sell at a profit, is so much made. It all goes to swell the profits, because the stuff must be made in order to make the good lumber, of which it is the refuse. All the by-products of the saw-mill have this advantage, that they are the savings from what is practically worthless, and hence their cost represents only the labor put into them after they pass the saw. It is the conversion of the useless into the valuable, and so long as the bare expense of the manipulation costs less than the value of the resulting product, there is money in it.

This is a matter which has received more attention in the pine mills than among those sawing hardwoods, for one reason, because the former are larger establishments as a rule, and are operated in a more scientific way. With many hardwood producers the sole problem they undertake to solve is to get a certain quantity of logs into such shape that they are marketable, and to get the money for them. Their prime object does not seem so much to make the largest possible profit as to turn their investment into cash quickly. This is a condition made necessary sometimes by the limited capital available, but it rapidly grows into a habit, and many never get beyond it. They begin and end their career as saw-mill men without developing the scientific side of their business at all, being content with merely buying trees and logs, cutting them with more or less economy into boards and plank, and burning everything that will not make such lumber.

The notion is widely prevalent among such operators that small mills are incompatible with the requirements of economy, and that in order to take advantage of the chances for profit in the close utilization of material a big mill with all imaginable appurtenances is a necessary prerequisite. This is a mistake. The man cutting five or six thousand a day is just as able to take care of the waste as one cutting four or five times as much.

The writer has in mind now a little single circular mill, located at a place which it has practically created, and where there is no other business, cutting from six to eight thousand feet a day, where the principle of working up the waste is carried out in detail. Besides the regular outfit of machinery, it has a band saw for making felloes, a sawing table, a lathe for making chair legs and for turning wood into various irregular shapes, cross-cut saws, etc. The result is that no cull stock is shipped from this mill, and what is left of the slabs and edgings needs very little grinding to make it as fine as sawdust. The owners have no difficulty in realizing a good profit from rather inferior logs, and their books show that a good deal of it comes from what they save out of the waste.

In some large mills what is ordinarily regarded as the refuse becomes the basis of a distinct business. The waste is sold by the saw mill man at a certain price, small, of course, and the buyer takes it and works it up. Every piece big enough to make a pill box is saved and utilized, and even when the cost of the material is added a good profit remains. In many cases this plan of utilization will prove practical and economical, relieving the mill man of the details attending the working up of his refuse stock, and furnishing another man with the means of making money.

Another way is for the mill operator to furnish the machinery and the stock, and let out the job of working it up on shares or at an agreed price for the product. A shrewd, enterprising mechanic can easily be found who will gladly supply the skill, push and all needed help in keeping up the department for an interest in its results. By such methods as these and others that will suggest themselves to a practical mill man, a deal of good money may be recovered from the slab pile that now represents nothing but loss to the owner. The machinery for working up wood into small shapes is not expensive and does not require such skill in handling as to make it difficult to secure competent men to operate it.

The hardwood mill men are fortunate in having a larger variety of by-products than pine, where they are mainly lath and pickets, small pieces of pine being of little use for anything but kindling. But hardwoods of nearly all kinds can be worked up very closely, and made to yield a handsome revenue. They are used in so many shapes and so largely in small pieces, that attention to the utilization of everything about a hardwood mill becomes of first importance. All mill owners cannot adopt the same plan, of course, but all should have some method of working the refuse into by-products, as they may if they will but give the subject proper study.

When everything possible has been made in the way of small articles of wood, there will still remain something of value in the residue—the sawdust, bark and chips that go into the furnace or the refuse burner. All this is material, just as good as an entire tree, for the manufacture of the numerous products derived from the destructive distillation of wood.

In several places already large works are in operation turning out such things as wood alcohol, creosote, acetate of lime, pitch, ether, wood oil and other things which sell readily and bring prices that show a large profit over the cost of making. There was an exhibit of an apparatus for this work, and of its products, in the forestry building at the World's Fair, which showed that remarkable results can be obtained with a comparatively small investment and at little cost. Figures are given in connection with it which indicate a profit of $5 on the carbonization of one cord of wood, allowing $2 as the cost of it, and a further margin if the wood tar obtained is redistilled. Using the refuse of saw mills, which could be placed in the apparatus as cheaply as in a refuse burner, the margin ought to be large enough to make the process one of value to lumber dealers. Possibly all mill owners might not find it practicable or advisable to carry the utilization of their waste material to this extent, but many of them might do so to their own profit and to the general advantage of the business."

## WHEN WE PLANT THE TREE.

What do we plant when we plant the trees?
We plant the ship which will cross the seas ;
We plant the mast to carry the sails ;
We plant the plank to withstand the gales,
The keel, and keelson, and beam and knee—
We plant the ship when we plant the tree.

What do we plant when we plant the tree ?
We plant the houses for you and me ;
We plant the rafters, the shingles, the floors ;
We plant the studding, the laths, the doors ;
The beams and siding, all parts that be—
We plant the house when we plant the tree.

What do we plant when we plant the tree ?
A thousand things that we daily see.
We plant the spire that outtowers the crag ;
We plant the staff for our country's flag ;
We plant the shade, from the hot sun free—
We plant all these when we plant the tree.

—Henry Abbey.

We learn with regret of the death of Mr. James Smith, senior member of the firm of James Smith & Bro., Liverpool, England. The late Mr. Smith first became connected with the timber trade by entering the office of James Houghton. He afterwards accepted a position with Messrs. Farnworth & Jardine, afterwards carrying on a prosperous business under the style of Robert Coltart, Smith & Co. His present partners are Messrs. G. J. Harrison, C. T. Tyrer and his brother, Charles T. Smith, their offices being at 14 Canada Dock, Liverpool, England. Their Canadian representatives are Smith, Tyrer & Co., Halifax, N.S,

# THE RETAILER AND Wood-Worker

## CRACKS IN SMALL CIRCULAR SAWS.

AFTER reading of the various causes of cracks in small circular saws, I am desirous of calling attention to one source of this evil not usually considered. It is found in the sensitiveness of the high grade steel to heat, and the great force with which it will expand and contract under varying temperatures. This expansion and contraction is positive in its action. For every degree of heat added there is a definite amount of expansion. The contraction, however, lags, and will stop short of its starting point. That is to say, by way of illustration, that if the expansion of a given piece of steel when heated from 60 degrees Fahrenheit to a red heat was one-fourth of an inch, the contraction, when it was cooled down again to 60 degrees, would not be quite one-fourth of an inch.

There are two ways in which this effect of heat on steel is manifested in circular saws—besides being responsible for cracks. One can be noted in the change in the tension, which is doubtless a familiar one to most sawyers. Another can be observed in saws, especially those of heavy gauge, which have been heated to a degree which causes a dark blue or black spot. Careful examinations will show that such spots are thicker than the metal surrounding them. Further tests would show that the temper of such spots was greatly modified, and this is also involved in the expansion, as the same piece of steel is not of the same dimensions at a high and low temper.

But to return to the subject of cracking. How much heat is developed in a saw while cutting is problematical, but under some circumstances it no doubt reaches 400 degrees Fahrenheit. Cross-cut saws give the most trouble by cracking. As we shall see, they are under special provocation to do so. If the rim of a cut-off saw becomes heated during a cut, or a series of cuts, made in close succession, what occurs as soon as it is out of the cut? It begins to cool off, rapidly at the teeth, much more slowly just below. It is a well established principle that heat escapes from any projecting points on a metal body much more freely than it can from a plain surface, and especially a bright polished surface. The teeth rushing through the air lose their heat faster than the plate just below their base. This unequal cooling sets up a severe strain in the saw blade. The fast cooling teeth are contracting over a plate which is expanded beyond its normal dimensions. This contraction proceeds, in many instances, with such force that small checks are made at the sharp corners at the bottom of the teeth. These sharp corners render the steel less resisting at these points, on the same principle that nicking a bar of iron all round with a cold chisel weakens it so that it may be easily broken.

These small checks, when first made, are sometimes so fine that they escape notice, but the labor of sawing soon extends them into the body of the plate. Where one crack is developed in a saw and a hole is drilled at the bottom of it, the strain when heated again may be concentrated at the bottom of the first crack and cause it to extend further into the body of the plate.

Rip saws seldom show cracks due to heating. There are several reasons for this, based upon the size and shape of the teeth, and the manner of use.—St. Louis Lumberman.

## MANUFACTURE OF WOOD NOVELTIES IN MAINE.

THE manufacture of wood novelties in Maine, according to the Industrial Journal, of Bangor, has become one of the important industries of the state. The growth of the industry covers a period extending back as far as 1857, and it has now assumed very large proportions. In the term "wood novelties" is included a large variety of small articles turned from wood. Closely allied to the wood-novelty industry, and often included under that head, is the production of fruit boxes and veneers. The average annual output of wood novelties in Maine, including these allied industries, has a value of over a million dollars, and the number of firms in the state engaged in the business proper is seventeen, in orange-box making four, and in veneer manufacture one.

One of the most interesting branches of the industry is the manufacture of wood rims for bicycles. The Maine plant is one of but three factories of this kind in the country. The average daily output is about 1,800 rims, and the value of the yearly product is about $120,000. The rims are made of rock maple, and each is composed of three pieces, glued and pressed together with such force and nicety that the rim appears like one piece, and only the most searching examination can detect the joints.

The tooth-pick industry in the state was established in 1857. There are two plants now in operation, one producing 525,000,000 tooth-picks per year, and the other about six billion. The annual product of these two mills has an average value of about $40,000. Another mill is to be opened soon, and operated by a newly-formed company in Androscoggin county.

A large plant in South Paris is devoted to the manufacture of children's carts, wagons and wheelbarrows, school desks, sleds, swings and similar articles. The name "wood novelty" is, in short, a very inclusive term, and the articles embraced are practically without end. Almost all kinds of wood found in the state are utilized in these plants in one way or another. In the orange-box factories, yellow birch, maple and beech woods are used.

The real benefit of the wood-working industries to Maine can be appreciated when it is remembered that before spool and wood-novelty making, and orange-box and wood veneer manufacture were introduced into the state, the raw material they now use was considered worthless except as fuel. This wood has now become a product of great value, and the sale of the articles manufactured in these mills brings into the state each year a large amount of money.

## AUTOMATIC BOX MACHINE.

A MARVELLOUS piece of automatic machinery for the purpose of making boxes has been invented by W. T. McRae, of Philadelphia, Penn., and recently set up for a practical test, after working five years on its perfection, says the Philadelphia Record. It is known as the Eureka, and is novel in its design, and does its work in an entirely new way as compared to the old machines designed for this work. It is fed from four sides with boards which have been previously cut the desired size, and a box is turned out at every revolution of the machine, the wooden cubes being thrown off at an astonishing rate. A single operator, who need not be a skilled person by any means, can work off 1000 boxes an hour, the work of the attendant being only to feed the press with the wood. The machine may be readily adjusted in a few minutes to make a box of any size within reasonable limits. One press, for instance, is made to take in all the various sizes of cigar boxes, while for larger ones another size machine is made. After the machine is started its action is automatic, and at each revolution a box is shot out, one following the other so rapidly that the question of carrying them off becomes an embarrassing one. The box is turned out complete, with the exception of the lid. Lock corner boxes are as readily handled as straight-edged ones, the hammers used in nailing them being taken off and plates substituted, which squeeze the parts together instead of nailing them. The capacity of this machine is said to be nearly ten times that of the box-making machines now in use.

No matter in what part of the Dominion you are situated, an expression of your views on any subject relative to the lumber trade is solicited by the publisher of this journal. No reader should wait for a personal invitation. Assistance thus rendered, as well as suggestions for making this journal more valuable to subscribers, will be much appreciated.

A very good rule for the power that a belt will transmit is as follows: Multiply the number of square inches in contact with the smallest pulley by the speed in feet per minute and divide by 36,000. The result will be the horse power that may be transmitted, by a double belt, under the most favorable conditions. Deductions must be made according to the judgment of the engineer, for with a single belt under poor conditions but one-half of the above will be realized in practice.

When we have tight and loose pulleys and a belt to ship we naturally put the belt shipper as near the driven pulleys on the countershaft as possible. There are many mechanics who have never thought of putting the shipper anywhere else and who probably could only with difficulty be persuaded to do so. As a matter of fact there are many cases in which, where the tight and loose pulleys are of the same diameter, with straight faces, and where very quick and frequent shipping of the belt is not required, it is much better to place the shipper near the driving pulley on the lineshaft, to operate on the belt as it approaches that pulley.—American Machinist.

# CANADA LUMBERMAN

## WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

*THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN THE AMERICAN AND FOREIGN MARKETS.*

VOL. IV. TORONTO, ONT., JULY 27, 1898 No. 27.

**CANADA LUMBERMAN**

PUBLISHED BY

**C. H. MORTIMER**

*Confederation Life Building - TORONTO.*

Branch Office:
NEW YORK LIFE INSURANCE BUILDING,
MONTREAL.

**Weekly Lumberman,** published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

**Lumberman,** Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

☞ Subscription price for the two editions for one year, $1.00.

**Lumbermen visiting Toronto are invited to call at the office of the CANADA LUMBERMAN. We shall have pleasure in giving them any information desired.**

## WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

## AUCTION SALE

— OF —

# Timber Limits

### At the Russell House, Ottawa.

THERE WILL BE OFFERED FOR SALE AT public auction at the Russell House, in the City of Ottawa, on the 15TH DAY OF SEPTEMBER NEXT, at 2 o'clock p.m., subject to reserved bid, the following TIMBER LIMITS in the Province of Quebec:—

**PARCEL 1.**

Mattawa Limits, 127 square miles, permanent numbers 346, 347, 348, 470, 471. (The small quantity of shanty plant, etc., on these Limits must be taken by the purchaser at valuation.)

**PARCEL 2.**

Lake Pennechango, River Gatineau Limits, 14 square miles. Permanent number 489.

**PARCEL 3.**

Grand Lake Limits, 71 square miles, permanent numbers 529 Berth Q.I., 528 Berth P.I. (These are virgin limits and well watered.)

Terms—One-third cash, balance in two or more equal annual payments, with interest at six per cent. per annum, satisfactorily secured. For further particulars, apply to

**THE RATHBUN CO.,**
**Deseronto, Ont.**

### FOR SALE

**300,000** FT. 1 x 4/7" x 12/16' WHITE PINE, good dressing strips; 100,000 ft. 1" x 8" x 12/16' dressing strips; thoroughly dry. A. & P. WHITE, Pembroke, Ont.

### HARDWOODS WANTED.

ADVERTISER WISHES TO COMMUNICATE with firms who can ship Beech, Elm and Birch Logs to the British markets. Reply to "BEECH," CANADA LUMBERMAN office.

### FOR SALE.

ONE GOOD SECOND HAND BAILEY GAUGE Lathe for turning fork handles, stems, curtain poles, &c.; one 24 in. Pony Surfacer; one bolter for pickets, squares, &c. Box 156, Thamesville, Ont.

### FOR SALE.

BUSINESS CHANCE: PINE AND HARDwood lumber yard, with saw and planing mill. A good, growing trade in a prosperous thriving village of 1,000. A rare chance for a practical builder with a small capital. Box 156, Thamesville, Ont.

### WANTED.

OFFERS, BY FIRST CLASS SHIPPERS, OF Canadian Spruce Deals, Battens and Boards, 15/16 feet average lengths; c.i.f. East Coast England. Terms cash, less 2½%. First class references required and given. Address "J. B.," care Editor CANADA LUMBERMAN.

### FOR SALE.

FOLLOWING SIDINGS FROM LOG MANUfactured into deals for the English market: Pine, thirds and better, 1, 1¼ and 1½ in.; fourths, 1, 1¼, 1½ and 2 in., being sound knotty lumber; first culls, ⅝, 1, 1¼, 1½, 2 and 3 inch—this has little red and unsound, but good for boxes. Spruce, good 1 and 1¼ inch; cull, ⅝, 1 and 1¼ inch. Deliverable on boat or barge here. Address P.O. Box 59, Three Rivers, Que.

# LIMITS AND MILL FOR SALE

## By Public Auction

THERE WILL BE EXPOSED FOR SALE BY public auction, in the Russell House, Ottawa, Ontario, on WEDNESDAY, 17TH AUGUST NEXT, at 12 o'clock noon, about Two Hundred and Seventy-One Miles of very desirable TIMBER LIMITS in the country tributary to Prince Albert, Sask., and about Seventy-Four Miles tributary to Edmonton, the whole estimated to contain over three hundred million feet board measure of Spruce and Tamarac Timber, large and of fine quality.

The Limits are easy of access. Those at Edmonton are directly on the Saskatchewan, and those at Prince Albert are tributary to the same river. They are well watered and the creeks easily driven.

Also, that well-known and valuable saw mill property, known as Moore & Macdowall's, in the Town of Prince Albert, Territory of Saskatchewan, comprising saw mills fitted with modern machinery, having a capacity of 2,500,000 feet per month, together with a planing mill in separate building, containing planer, matcher, etc., with railway siding, large boarding house, one cottage, two large dwelling houses, and piling ground, the whole property comprising an area of about one hundred and fifty acres.

The Prince Albert Limits will be offered in one block, together with the mill property above described, making together an exceedingly desirable investment.

The Limits in the neighborhood of Edmonton will be offered separately.

For further particulars apply to:

WILLIAM LITTLE, Prince Albert, Sask.
JOHN C. BROWNE, Ottawa.
R. B. KESSEN, Temple Building, Toronto.
J. B. MONK, Winnipeg, Man.

From whom maps of the Limits and other information may be obtained; also from

W. H. LEWIS,
Auctioneer.

WANTED.—Situation in Mill or Factory by Young Man (26), where $1,000 invested this fall would secure interest in same. Box 200, CANADA LUMBERMAN.

## PROVINCE OF QUEBEC

## Department of Lands, Forests and Fisheries.

### WOODS AND FORESTS.

QUEBEC, 21st July, 1898.

Notice is hereby given that the sale of Timber Limits advertised to take place on 16th August next, has been postponed to WEDNESDAY, THE 26TH OCTOBER NEXT.

S. N. PARENT,
Commissioner of Lands, Forests and Fisheries.

## CURRENT TRADE CONDITIONS.

### ONTARIO.

All things considered, lumber manufacturers and dealers in this province have reason to feel satisfied with present trade conditions and the future outlook. It is a fortunate circumstance that a decided improvement in business conditions throughout Canada should have immediately followed the putting in force of the Dingley bill. The large increase in the demand of the home market, coming at a time when stocks were unusually low in consequence of the heavy shipments into the United States prior to the imposition of the duty, tended to maintain equilibrium in the trade. No large shrinkage either in prices or volume of trade has been perceptible. The wise determination on the part of manufacturers to restrict the output of their mills has likewise had a very beneficial effect upon the situation. Stocks are reported to be unusually light, and the demand for the commoner grades of pine lumber, as well as for hemlock and shingles is uncommonly good. Canadian factories are reported to be demanding much larger supplies of lumber than for several years past, and prices are considered satisfactory. There continues to be an active demand for basswood, ash and elm. If the harvest of the present season compares favorably in quantity and quality with that of last year, lumbermen may look forward with confidence to an active fall trade.

### QUEBEC AND NEW BRUNSWICK.

As a result of the recent drop in carrying charges, an increased number of shipments are being made from Montreal and Quebec, as well as from St. John and other New Brunswick ports. The British market is not sufficiently active to warrant extensive shipments from these provinces, and unless care is exercised by shippers in this respect, a weakening of prices may be looked for as the natural result. 12,126,185 feet of deals and 1,000 tons of birch timber were recently shipped from St. John to England, Ireland and Holland. Eight steamers and fifteen schooners are under charter to load deals at St. John. Freights to Liverpool range from 38s 9d to 41s 3d. The rate to west coast of England is about 42s 6d. There is no inducement to ship to the United States, and there has accordingly been a heavy falling off in exports.

### MANITOBA AND BRITISH COLUMBIA.

The condition of the trade in Manitoba is on the whole satisfactory, the demand being sufficiently active to warrant the mills in increasing prices somewhat. A new retail schedule based upon these increased prices has been prepared at Winnipeg, but has not been formally agreed to by the dealers, and in consequence prices in that city are somewhat irregular. The mills at Selkirk are in active operation, cutting large quantities of spruce lumber, and shipping to all parts of the province. It is reported that 3,500,000 feet of logs from Crane Lake and 3,000,000 feet from the Manitou are now on the way to the mills at Rat Portage. The Dominion government have just issued the following new regulations governiug the granting of licenses to cut timber on Dominion lands in Manitoba and the territories: "The licensee shall pay an annual ground rent of $5 per square mile, except for lands situated west of Eagle pass, in the province of British Columbia, in which case the yearly ground rent shall be five cents an acre. The following crown dues will be collected: Sawn lumber, 50 cents per thousand feet B.M.; railway ties, eight feet long, 1½ cents each; railway ties, nine feet long, 1¾ cents each; shingle bolts, 25 cents per cord, and 5 per cent. on the sales of all other products of the berth. A rebate of 40 cents per thousand feet B.M. will be allowed on lumber exported from British Columbia to places outside of the Dominion of Canada, provided the licensee can produce evidence to the crown timber agent as to the quality exported." In British Columbia the local demand is active, consequent to a large extent upon railway and bridge construction, building and mining enter-

prises. Foreign demand is dull, with few shipments. It is reported that Mr. A. C. McArthur, of McMillen, Idaho, has been given the contract to supply 14,000,000 feet of lumber to Mr. Peter Larson for use in railway construction in British Columbia. The shingle situation on the American side is unusually dull, and this of course, affects injuriously the industry in British Columbia.

UNITED STATES.

The feeling of uncertainty occasioned by the war has caused a large falling off in building operations in the larger cities, with a proportionate lack of demand for lumber, particularly the better grades. On the other hand the demand throughout the country, especially for improvements to farm buildings, is unusually good, and is furnishing a market for large quantities of low grade lumber, such as could not in other years be disposed of to advantage. The success which has attended the American arms, and the prospect of an early close of hostilities, is expected to lead to a resumption of business on a large and active scale, and to result in a good fall trade in lumber. Lake shipments are likely to materially increase as the result of the drop due to the failure of the Carriers' Association to maintain rates. Rates from Lake Superior ports to Buffalo have declined to $1.50, and to Chicago to $1.62½. Boston advices state that the spruce trade is exceedingly dull. This is attributed to the large importations from Canada last year and the fact that spruce is being superseded by North Carolina pine. Ordinary spruce frames are quoted at Boston as low as $12.50. A moderate demand is reported from Buffalo and Tonawanda for export stock, cutting and better, shelving, siding, ceiling and flooring, common box and culls, ash, elm, basswood and thick maple. Hardwood conditions remain to a large extent unchanged—the shortage of certain kinds of stock, notably white ash and thick oak, being perceptible.

FOREIGN.

A British Board of Trade return just issued shows a heavy decline in timber imports. The figures for the first six months of the present year, in comparison with 1896-7, are as follows :

| HEWN. | 1896. Lds. | 1897. Lds. | 1898. Lds. |
|---|---|---|---|
| From Russia | 62,798 | 57,080 | 55,496 |
| " Sweden and Norway | 60,451 | 49,882 | 54,578 |
| " Germany | 20,777 | 18,912 | 21,703 |
| " United States of America | 16,132 | 20,974 | 15,154 |
| " British East Indies | 2,680 | 5,349 | 4,849 |
| " British North America | 19,264 | 16,929 | 9,154 |
| " Other Countries | 74,189 | 69,606 | 30,634 |
| Total | 256,291 | 238,732 | 191,568 |
| SAWN. | Lds. | Lds. | Lds. |
| From Russia | 181,068 | 179,961 | 142,074 |
| " Sweden and Norway | 378,379 | 370,097 | 280,564 |
| " United States of America | 70,593 | 80,792 | 73,925 |
| " British North America | 152,199 | 258,217 | 129,051 |
| " Other Countries | 7,647 | 7,205 | 10,073 |
| Total | 789,886 | 898,272 | 635,687 |

To the unusually high freight rates, consequent upon the employment of vessels for war purposes, is doubtless due the large falling off in Canadian shipments. Now that freights are returning to a normal condition, a much larger quantity of goods will probably go forward. There is danger that this may have the effect of weakening prices, which, owing to restricted shipments from the United States and Canada, and also from Baltic ports, have been fairly well maintained. Dissatisfaction with the terms of the new form of charter which Baltic ship owners are seeking to introduce, is greatly lessening the number of shipments from that quarter at present. Pine and spruce are reported more active. High prices are being paid in the London market for favorite sizes, such as 4 in., 2½ and 2 in. battens. At Messrs. Churchill & Sims' last fornightly sale, Canadian 3 x 11 1st pine realized £18 10s. to £19, 3 x 8/7 3rd pine £6 10s. to £7 5s., with 3 x 9 at £7 15s., 3 x 11 4th pine £7, 3 x 10 3rd spruce £6 10s. to £6 15s., with 3 x 9 at £7 10s., 3 x 11 4th spruce £5 15s., with 3 x 10 at £6. At Messrs. A. & D. Mackay's sale on the 8th inst., a parcel of 388 bright birch logs, containing 14,210 feet, brought prices varying from 16½d. to 2s. 1d. per ft., or an average of 18½d. per ft. for 16¼ in. Another parcel averaged 16¾d. per ft. for 15¼ in. Small lots of elm and maple logs sold at 17¾d. per ft. Importations are said to be somewhat excessive at Liverpool and Glasgow. Charters are reported for July from the Saguenay at 42s. 6d., St. John at 40s. and 41s. 3d., Montreal at 40s. to 42s. 6d. to named ports in the United Kingdom, and will repeat for August. The East Coast Timber Importers' Association has been formed to establish an accepted and generally recognized code of rules for carrying on the timber trade on the east coast or elsewhere to protect the status and interests of recognized timber importers.

## STOCKS AND PRICES.

The total shipments for Bay City during June amounted to 6,430,000 feet, which is rather light.

It is estimated that during this season the Fredericton Boom Co. will raft 113,000,000 feet of timber.

Consignments of Canadian logs were last week rafted from French river to Bay City, Mich., for Turner & Fisher and Moore, Glover & Co., amounting to 5,184,211 feet b.m.

Churchill & Sims, London, Eng., give the following as the stock of wood in public docks at London for three years :

| | 1896. Pieces. | 1897. Pieces. | 1898. Pieces. |
|---|---|---|---|
| Foreign deals and ends | 1,281,000 | 1,329,000 | 1,158,000 |
| " battens | 1,501,000 | 1,628,000 | 1,657,000 |
| Pine deals and battens | 704,000 | 791,000 | 857,000 |
| Spruce " " | 236,000 | 633,000 | 697,000 |
| Boards, rough | 1,478,000 | 1,664,000 | 2,397,000 |
| " prepared | 5,558,000 | 6,236,000 | 5,486,000 |
| Total | 10,758,000 | 12,281,000 | 12,252,000 |

## THE NEW BRUNSWICK SPRUCE DEAL MARKET.

Timber, of London, Eng., in its last issue, contains the following review of the spruce deal market, which will be interesting to manufacturers on this side :

New Brunswick spruce deals are again attracting the serious attention of buyers and sellers, but owing to the bitter experience of last autumn, most of the large operators are displaying great and commendable caution. With the exception of the Irish business, which is a special one, and seldom fluctuates much, nothing like an average supply has been contracted for by importers, and the total imports up to date this year are far below those of 1897. An open winter and spring, with plenty of building work, has reduced stocks nearly everywhere to a low point, so much so that during the past three months values have been exceedingly steady, with a slight upward tendency. This has at length been checked by a few recent arrivals, coupled with the near approach of numerous floating cargoes, now being freely offered to dealers. In the opening months of the year several thousand standards were placed by shippers or their agents around the coast at a slight advance on the lowest prices of 1897, and those who thus bought early have so far no reason to regret it. Some large lines of special sizes, principally 2 and 2½-inch battens, were also placed on the east coast at fully 10s. above present quotations, but this business is now a thing of the past, Baltic whitewood having again come into vogue at lower figures, such as make spruce competition impossible.

Our Canadian friends, whose increasing hopes of a large spruce demand were referred to in our last issue, may, therefore, take it for granted that whenever Russian or Swedish sawn whitewood can be offered at the same, or a slightly higher price, it will, with a considerable number of buyers, especially on the east coast, always have the preference. It is mainly a question of money, and, taking an average of ten years, America cannot compete with the Baltic at many large British ports, apart from the great relative value of whitewood for planed floorings and other joinery purposes. About 1,200 standards of St. John spruce deals lying at Fleetwood, but belonging to a well-known Liverpool firm, were offered by auction at the latter port on Friday week last with practically a barren result. Only two lots of 9 x 3 changed hands at £6 17s. 6d., although it is reported that a few others were sold by private treaty afterwards. There can be but little doubt that this excellent stock would have fared much better if it had been offered a short time ago, when many dimension sizes were so scarce, and it was probably a mistake in tactics to try to sell it last week, as against newer arrivals at more favorable places of distribution.

The position at Liverpool is fairly strong, the import and consumption for June being nearly identical, with the further advantage that the existing stock only equals an ordinary month's requirements. Supplies generally on the west coast are also low, so that with a good demand, such as is undoubtedly in evidence, and with prospective moderate supplies, it does not seem possible for the fiasco of last season to repeat itself. A rapid advance in freights, brought about by corn speculations, delayed chartering so seriously that many usual operators lost all confidence in the market, and have since been playing a waiting game. While values in this direction have eased down 5s. to 7s. 6d. per standard, they have not lost all the rise as compared with several recent years, and this forms the only uncertain feature yet to be reckoned with. St. John deals are selling freely ex quay at £6 15s. to £7, while West Bay, Halifax, etc., may be quoted at £6 10s. to £6 12s. 6d. One or two shipments of poor specification are offering at 2s. 6d. to 5s. less, but these consist largely of 7-inch and 8-inch, with practically no 11-inch deals included.

## THE GLASGOW MARKET.

Edmiston & Mitchell's monthly timber circular of 30th June gives the following particulars of the Glasgow market :

The month of June has been an active one on the Clyde as far as import goes. The liners from Montreal have brought about 1,548 standards of pine and spruce deals, boards, ends, etc., and, in addition, two full cargoes of pine deals, etc., containing 2,113 standards, are to hand ; also, two full cargoes of spruce with 1,666 standards. An approximate comparison of the import from British North America up to 30th June, for the last two years, shows the following : Pine deals, boards, etc., 5,626 standards, against 6,256 last year ; spruce deals, etc., 3,819 standards, against 4,577 last year.

The Clyde shipbuilding returns are highly satisfactory, and no less than 47,800 register tonnage has been launched, making the total for the half-year a record one, viz., 207,500 tons. Although the amount of new orders booked is only about 17,000 tons, still the quantity of work on hand assures us of a continuance of activity for at least six months.

House-building maintains the activity which has characterized it for many years.

The strike in the cabinet trade, which has now lasted three months, is, we regret to report, no nearer a settlement, and it is having a serious effect on the timber trade.

## FIRES.

The Ottawa Mining & Milling Co.'s saw mill, at North Bend, B.C., was recently burned.

Cayonette's shingle mill at St. Moise, on the Intercolonial Railway, was burned on the 20th inst. Two watchmen lost their lives.

## SHIPPING MATTERS.

Large quantities of pulp are being shipped from Montreal to Liverpool and Glasgow.

The Cutler & Savage Lumber Co., of Cutler, Ont., have ceased shipping to the United States market for the present, owing to the duty and low prices.

A cargo of 25,000 feet of waney pine was recently brought by steamer Niagara from Ashland, Wis., via Welland Canal to Kingston, Ont., for re-shipment to England.

The schrs. Moss Glen and Walter Summer, from Liverpool, N.S., and Keewaydin, from St. John, N.B., with cargoes of white pine and spruce lumber, and schrs. Dawn, Nellie Morrow, Minnie and Neva, from Paspebiac, with shingles, arrived at Barbadoes July 9th.

## BUSINESS NOTES.

Mr. Tegart will erect a saw mill near Golden, B.C.

James Richards, saw mill owner, Kinlough, Ont., is dead.

Mr. A. R. Chisholm has just opened out in the lumber business at Edmonton, N.W.T.

R. E. L. Brown has purchased the Bell saw mill property and timber rights at Kaslo, B.C.

Lumbermen are notified to use the north instead of the south channel of the St. Lawrence river at Cornwall Island during the construction of the New York and Ottawa R.R. bridge.

## LUMBER FREIGHT RATES.

CANADA ATLANTIC RAILWAY.

Lumber freight rates on the Canada Atlantic Railway are as follows: Ottawa to Toronto, 10 cents per 100 lbs.; Parry Sound to Toronto, pine 10 cents, hardwood, 11 cents; Ottawa to Oswego, $1.90 per M ft.; Ottawa to Syracuse and Rome, $2.20 per M ft ,(3,000 lbs. and under per M ft.); Ottawa to Montreal, $1.00 per M ft.; Quebec, $2.00; Arnprior to Montreal, $1.50 per M; Quebec, $2.50; Parry Sound to Montreal, $3.00 per M ft.; Ottawa to Buffalo, 12 cents per 100 lbs.: Ottawa to Port Huron and Detroit, 14 cents per 100 lbs. Ottawa to New York, track delivery 15 cents per 100 lbs., lightered 17 cents per 100 lbs. Arnprior to New York, track delivery 17 cts. per 100 lbs., lightered 19 cts. per 100 lbs. Parry Sound, track, 20 cents, lightered, 22 cents per 100 lbs.; Ottawa to New York, via Albany and Williams Line, seasoned pine lumber and shorts, in lots 50 M feet and over, $2.50 per M; under 50 M feet, $3.00 per M; from Arnprior, lots over 50 M feet, $3.00; under 50 M feet, $3.75 per M; from Parry Sound, lots 50 M feet and over, $4.00 per M; seasoned lath from Ottawa, lots 250 M pieces and over, 50 cents per M pcs.; lots under 250 M pcs., 60 cents per M pcs.; from Arnprior, lots 250 M pcs and over, 60 cents per M pcs.; under 250 M pcs., 70 cents per M; from Parry Sound, 80 cents per M pcs., lots 250 M and over; (rates named on lots under 50 M feet lumber and 250 M pcs. lath subject to extra towage. Rates on 50 M feet lumber and over and 250 pcs. lath are applicable to all points in New York city excepting points above Madison avenue bridge in Harlem river, to all points in Brooklyn, and to Jersey City proper; Ottawa, Rockland and Hawkesbury to Boston and common points, local 15c.; exports 11c. per 100 lbs.; Arnprior to Boston and common points, local 17 cents; export 13 cts. per 100 lbs.; Parry Sound to Boston and Portland and common points, local 21½ cents, export 20 cts. per 100 lbs.; Ottawa, Rockland and Hawkesbury to Portland, &c., 15 cts.; Arnprior to Portland, 17 cts.; Ottawa to Burlington, 6c. per 100 lbs.; Ottawa to Albany, 10 cts. per 100 lbs.; Arnprior to Albany, 12 cts. per 100 lbs.; Parry Sound to Albany 17 cts. per 100 lbs.; Ottawa to Scranton and Wilkesbarre, Pa., also Binghampton, N.Y., 13 cents per 100 lbs, from Arnprior 15 cents, from Parry Sound 20 cents per 100 lbs.; Ottawa to St. John, N. B. and common points, 20 cents per 100 lbs.; Ottawa to Halifax, N. S. and common points, 22½ cents per 100 lbs. Minimum carload weight for shipment of lumber, lath, shingles, etc., is 30,000 lbs., and rates quoted above are in cents per 100 lbs., except when quoted per M ft. the minimum carload charged is 10 M ft., lumber not exceeding 3,000 lbs. to the M feet. Ottawa rates apply on shipments from Rockland and Hawkesbury.

GRAND TRUNK RAILWAY.

Lumber freight rates for pine on the Grand Trunk Railway, according to the tariff issued 15th February, 1897, will be found below. General instructions in shipping by Grand Trunk are embodied in these words in the schedule: Minimum weight 30,000 lbs. per car, unless the marked capacity of the car be less, in which case the marked capacity (but not less than 24,000 lbs.) will be the minimum weight. Exceptions—Cedar posts in box cars, dry basswood and light pine or cedar lumber, dry cedar shingles, charcoal and sawdust, which cannot be loaded up to 30,000 lbs. or up to the marked capacity of car, will be carried at actual weight, minimum 24,000 lbs. The rates on lumber in the tariff will not be higher from an intermediate point on the straight run than from the first named point beyond to the same destination. For instance, the rates from Orillia to Guelph, Brampton, Weston or Toronto, would not be higher than the specific rates named from Gravenhurst to the same points. The rates from Cargill and Southampton to points east of Listowel and south and west of Stratford will be the same as from Kincardine, and the rates from Hanover or Hepworth would not be higher than from Wiarton to the same destination, but in no case are higher rates to be charged than as per mileage table published on page 15 of tariff.

Rates from leading lumber points on pine and other softwood lumber, shingles, etc., are as follows: From Glencairn, Creemore, Aurora, Barrie and other points in group B to Toronto, 6½c.; Collingwood, Penetang, Coldwater, Waubaushene, Sturgeon Bay, Victoria Harbor, Midland, Fenelon Falls, Longford, Gravenhurst and other points in group C, to Toronto, 6½c.; Bracebridge to Toronto 7c.; Utterson, Huntsville, Navor-Emsdale, Katrine to Toronto, 7½c.; Burk's Falls, Berriedale Sundridge and South River, to Toronto, 8c.: Trout Creek, Powassen and Callender to Toronto, 9c.; Nipissing Junction and North Bay, 10c. Rate from Goderich, Kincardine, Owen Sound and Wiarton to Toronto, 6½c. These rates are per 100 lbs. Rates from Toronto east to Belleville are 7½c. per 100 lbs.; to Deseronto, 9c.; to Brockville and Prescott, 10c.; to Montreal and Ottawa, 10c. The rates on hardwoods average about from 1c. per 100 lbs. higher than on pine and softwoods. For rates on railway ties, mahogany, rosewood, walnut, cherry, and other valuable woods, application must be made to the district freight agent.

On spruce and balsam (partly seasoned) for pulp manufacture, the rate from Longford, Wiarton, Penetang, Coldwater, Waubaushene, Victoria Harbor, Haliburton, Kinmount, etc., to Toronto, is $2.20 per cord; and to Merriton and Thorold, $2.60; Katrine, Callendar, North Bay, etc., to same points, $2.45 and $2.60 respectively; Beeton, Allandale, Orillia, etc., $2.20 and $2.60. On green spruce and balsam the rate is 25 per cent. higher.

CANADIAN PACIFIC RAILWAY.

Mr. George A. Fowler, lumber agent C.P.R., writes as follows under date of February 14th, 1898: "The rates at present in effect to Toronto and Hamilton are as follows: Pine and soft woods from Klock, Mattawa, Bonfield, North Bay, Sturgeon Falls, Cache Bay and Warren, 9 cents; from Sudbury Jct., Rayside and Chelmsford, 10 cents; from Cartier and Geneva Lake, 10½ cents; from Biscotasing, White Fish, Massey, Cutler, Spragge and Algoma, 12 cents per 100 lbs. The rates on hardwood are one cent per 100 lbs. higher than those on pine. From Ottawa, Hull, Aylmer and Dechenes Mills, also Arnprior. Braeside and Pembroke, to Toronto the rate is 10 cents both on pine and hardwood. From Ottawa, Hull, Aylmer and Deschenes Mills to station on the Lake Erie and Detroit River, Erie and Huron and Michigan Central railways, specified in special lumber tariff, the rate is 14½ cents on both pine and hardwood. The above rates are based on a minimum of 30,000 lbs. per car."

"Taking effect March 21st, 1898, the rates on seasoned lumber to New York, Brooklyn, Jersey City, etc., via Albany, thence via water, will be as follows: From Ottawa, Ont., Aylmer and Deschenes Mills, Que.—pine and shorts, in lots 50 M feet and over, $2.50; under 50 M feet, $3.25; hardwood, lots 50 M feet and over, $4; under 50 M feet, $4.25; lath, 250 M pieces and over, 50c. per M pieces; under 250 M pieces, 60c. per M pieces. From Carleton Junction—pine and shorts, lots 50 M feet and over, $2.75; under 50 M feet, $3.50; hardwood, 50 M feet and over, $4.25; under 50 M feet, $4.50; lath, 250 M pieces and over, 55c. per M pieces; under 250 M pieces, 65c. per M pieces. From Arnprior and Braeside—pine and shorts, lots 50 M feet and over, $3 00; under 50 M feet, $3.75; hardwood, 50 M feet and over, $4.50; under 50 M feet, $4 75; lath, 250 M pieces, 60c.: under 250 M pieces, 70c. per M pieces. From Pembroke—pine and shorts 50 M feet and over, $3.25; under 50 M feet, $4; hardwood, 50 M feet and over, $4.75, under 50 M feet, $5; lath, 250 M pieces and over, 65c.; under 250 M pieces, 75c. per M pieces. The minimum carload of lumber is 10,000 feet and lath 50,000 pieces."

"The summer rates to Montreal go into effect April 1st, and will be as follows: From Ottawa—softwood lumber, $1 per M feet; hardwood and dimension timber, 4c. per 100 lbs.; lath, 20c. per M pieces. From Carleton Junction, seasoned softwood lumber, $1.25 per M feet; hardwood lumber and dimension timber, 5c. per 100 lbs.; lath, 25c. per M pieces. From Arnprior and Braeside—softwood lumber, $1.50 per M feet; hardwood lumber and dimension timber, 6c. per 100 lbs; lath, 30c. per M pieces.

"From Ottawa to Three Rivers and Quebec—softwood lumber, $2 per M feet; hardwood lumber and dimension timber, 8c. per 100 lbs.; lath, 40c. per M pieces. From Carleton Junction—softwood lumber, $2.25; hardwood lumber and dimension timber, 9c. per 100 lbs.: lath, 45c. per M pieces. From Arnprior and Braeside—softwood lumber, $2.50 per M feet; hardwood lumber and dimension timber, 10c. per 100 lbs.; lath, 50c. per M pieces.

"Ottawa rates apply from Hull, Aylmer and Deschenes Mills, Que. Montreal rates also apply to Mile End, Montreal Junction, Westmount, St. Luc Junction, St. Anne de Bellevue, and Vaudreuil. The rates on softwood lumber as above are intended to apply on lumber which will not exceed three thousand pounds per thousand feet, and on lath which will not exceed 600 lbs. per M pieces; excess over these weights will be charged for at rates in effect on dimension timber."

## CANADIAN EXPORTERS AND WHOLESALERS

(If bent to shape, $2.00 per thousand more.)

# WOOD PULP DEPARTMENT

## BRITISH IMPORT OF PULP AND PAPER.

Some interesting statistics relative to the import of pulp and paper by Great Britain are found in a recent issue of Paper and Pulp, of London, Eng. These statistics are particularly valuable, inasmuch as heretofore there has been an absence of detailed information of this character.

The following figures show the quantity and value of pulp imported into Great Britain during the years named :

| | Quantity in Tons. | Value. |
|---|---|---|
| 1893 | 215,920 | £1,184,265 |
| 1894 | 279,765 | 1,432,400 |
| 1895 | 297,095 | 1,574,302 |
| 1896 | 327,080 | 1,684,647 |
| 1897 | 388,304 | 1,939,761 |

The above quantities were obtained from the different countries in the following proportions :

| From | Norway. Tons. | Sweden. Tons. | Germany. Tons. | United States. Tons. | Canada. Tons. |
|---|---|---|---|---|---|
| 1893 | 125,889 | 48,049 | 11,096 | 5,569 | 7,870 |
| 1894 | 162,346 | 51,998 | 7,422 | 13,191 | 23,751 |
| 1895 | 173,898 | 83,704 | 4,835 | 976 | 16,768 |
| 1896 | 205,677 | 94,917 | 4,379 | 847 | 2,714 |
| 1897 | 239,133 | 93,620 | 5,686 | 7,148 | 25,873 |

It will be observed that in four years the import of pulp into Great Britain has increased over seventy-five per cent., and that while Norway, Sweden and Canada are capturing the bulk of the trade, Germany and the United States are showing signs of decline.

Turning to paper, the imports by Great Britain for five years are given as follows :

| | Quantity in Cwts. | Value. |
|---|---|---|
| 1893 | 2,922,882 | £2,347,080 |
| 1894 | 3,381,732 | 2,654,070 |
| 1895 | 3,690,562 | 2,845,730 |
| 1896 | 4,040,892 | 2,138,438 |
| 1897 | 4,845,021 | 3,480,574 |

These figures show that the paper trade of that country is also expanding, and that the market is worthy of the cultivation of our paper makers, who have abundance of the raw material—spruce. The figures showing the imports of paper from different countries may prove interesting :

| | United States. | Germany. | Sweden. | Norway. |
|---|---|---|---|---|
| 1893 Cwts. | 37,174 | 594,505 | 333,455 | 277,190 |
| 1894 " | 113,053 | 775,001 | 438,805 | 293,117 |
| 1895 " | 112,928 | 746,528 | 468,477 | 392,162 |
| 1896 " | 127,459 | 756,033 | 541,759 | 454,828 |
| 1897 " | 641,340 | 726,263 | 578,323 | 607,043 |

| | Canada. | Holland. | Belgium. | Russia. |
|---|---|---|---|---|
| 1893 Cwts. | 53 | 1,225,672 | 220,022 | 126,281 |
| 1894 " | 1,325 | 1,281,943 | 236,955 | 146,926 |
| 1895 " | 2,440 | 1,476,835 | 242,882 | 141,311 |
| 1896 " | 3,481 | 1,569,034 | 313,683 | 138,034 |
| 1897 " | 18,833 | 1,719,270 | 281,892 | 136,671 |

France also contributed, but very lightly, to the British supply of paper.

## PROPOSED PULP MILL AT HAWKESBURY.

It is expected that work will shortly be commenced on the erection of a new pulp mill at Hawkesbury, Ont. Messrs. Riordan & Co., of St. Catharines, Ont., are the promoters of the scheme. They have purchased from Hon. J. K. Ward extensive spruce limits on the River Rouge, whose outlet is about 7 miles above Hawkesbury. The Canada Atlantic Railway Co. is putting in a spur, or siding, from their present station to where the pulp mills are to be erected. The town has voted a bonus of $7,500, to be paid the Canada Atlantic Railway to put in this spur.

Hawkesbury is situated on the Ottawa river, at the head of the Longue Sault, where the Hawkesbury Lumber Co. have their mills, which are run by water power. This place is half way between Ottawa and Montreal, and goods can be shipped by water or by rail. The Canadian Pacific Railway is recognizing the advantages of Hawkesbury for freight and passengers, and proposes putting in an extension from their present line to that place. It will therefore be seen that Messrs. Riordan & Co. have made a very judicious choice in locating there.

The Great Northwestern has been again communicating with the town council there with regard to their line which will cross the Ottawa river at Hawkesbury, and which is to be worked in connection with Mr. Booth's line, forming another outlet for his Parry Sound Railway to Quebec and other intermediate points.

## PAPER FLOORS.

Paper floors are increasing in popularity, which is readily explained by the many advantages they possess over wooden flooring. An important advantage consists in the absence of joints, whereby accumulations of dust, vermin and fungi dangerous to health are done away with. The new paper floors are bad conductors of heat and sound, and, in spite of their hardness, have a linoleum-like, soft feel to the foot. The cost is considerably lower than that of floors made of hardwood. The paper mass receives a small addition of cement as binder and is shipped in bags in powder form. The mass is stirred into stiff paste, spread out on the floor, pressed down by means of rollers and painted with oadwood, nutwood or mahogany color after drying.

## THE UNITED STATES DEPENDENT ON CANADA.

Senator Warner Miller, of Nicaragua Canal fame, was in Montreal recently with his friend, Mr. Warren Curtis, treasurer and general manager of the Hudson River Pulp & Paper Co. To a representative of the Montreal Star the latter gentleman stated that they were on private business connected with the purchase of supplies of wood for their mills. "We find," he said, "Canadian spruce about the best material in the world for the manufacture of pulp and will use about 3,000 car loads of it this year. We take it all down by train, so that it arrives at our mills in a dry condition, which gives it a decided advantage over the Adirondack wood which is floated to us, and consequently comes to us thoroughly soaked. I do not understand," he went on, "why Canada is not doing more in the manufacture of paper. You have every advantage as regards material, power and cheap labor. We are shipping to-day 25 per cent. of our product to England, supplying as we do Pall Mall Gazette, World and Echo, of London. We also ship extensively to Austria, sometimes as much as 200 tons a week. As things are at present it costs 50 per cent. more to make paper in England than it does in the States, and considering the extent which we have to depend upon Canada for our supply of wood it seems as if with some enterprise Canadians ought to be able to compete with us. Paper is manufactured to-day on so close a margin that steam power cannot be used, and that is a powerful factor in favor of the makers on this side. In Canada you have plenty of water privileges ready to be utilized, and I should not be astonished to see some Englishmen establishing plants here. As regards American capital coming here for the purpose, the chances of tariff changes forms a detrimental element and makes capitalists timid, but I know that if there was any certainty that no adverse legislation would take place Americans would be quick to avail themselves of the advantages which a Canadian location of their mills would give them."

## PULP NOTES.

Some particulars are furnished of the new pulp mill of the Laurentide Pulp Co. at Grand Mere, Que. The paper mill will have a daily capacity of 40 tons of paper and 30 tons of cardboard, while the daily output of the pulp mill will be 75 tons sulphite and 100 tons ground wood pulp.

The steamer Louisiana recently sailed from Chicoutimi, Que., with the first full cargo of pulp ever exported from Canada. The cargo consisted of 2,200 tons, of a valuation in the English market of $25,000. Another similar shipment is expected to be made this month. In the mill of the Chicoutimi Pulp Co. there are 80 hands employed day and night, the present output being 60 tons net weight.

Concerning the British market for wood-pulp, Paper and Pulp, of London, Eng., says : "There is nothing fresh to report about mechanical pulp, as there is little doing. We have not heard of any sales for next year yet, and there is not much left for this. The price for the finest qualities is about 43s. c.i.f. Manchester, and for ordinary 41s., so that it may be taken for granted that speculators are offering at 38s. or 39s. There are some extraordinary rumors abroad as to the low prices mechanical pulp can be bought at just now, but we have not been able to trace their origin. The market for sulphite for prompt and early delivery is in a depressed condition at present. Some sales have been concluded for next year, at rather lower prices than last.

## CANADA'S COMMERCIAL AGENTS.

Following is the correct official list of Canada's Commercial Agents in Great Britain, British possessions and foreign countries :

J. S. Larke, Sydney, N.S.W., agent for Australasia.

G. Eustace Burke, Kingston, Jamaica, agent for Jamaica.

Robert Bryson, St. John, Antigua, agent for Antigua, Montserrat and Dominica.

S. L. Horsford, St. Kitts, agent for St. Kitts, Nevis and Virgin Islands.

Edgar Tripp, Port of Spain, Trinidad, agent for Trinidad and Tobago.

C. E. Sontum, Christiania, Norway, agent for Sweden and Denmark.

D. M. Rennie, Buenos Ayres, Argentine Republic, agent for Argentine Republic and Uruguay.

In addition to their other duties, the undermentioned will answer inquiries relative to trade matters, and their services are available in furthering the interests of Canadian traders.

J. G. Colmer, 17 Victoria street, London, S.W., England.

Thomas Moffat, 16 Church street, Cape Town, South Africa.

G. H. Mitchell, 15 Water street, Liverpool, England.

H. M. Murray, 40 St. Enoch Square, Glasgow, Scotland.

Harrison Watson, Curator, Imperial Institute, London, England.

It is announced that Queen Victoria has appointed as High Commissioners, to discuss the differences existing between Canada and the United States, the following gentlemen : Ex-Lord High Chancellor Baron Herschell ; the Premier of Canada, Sir Wilfrid Laurier ; Sir Richard Cartwright, Minister of Trade and Commerce, and Sir Louis Davies, Minister of Marine and Fisheries.

# THE NEWS.

—Senator Poirier is building a shingle mill at Sackville, N.B.

—While working in Currie's saw-mill at Fredericton, N.B., Alex. Mersereau had his left hand cut off.

—John Whitesides is erecting a shingle mill at Huntsville, Ont., upon the site of his saw-mill burned some years ago.

—A team of horses belonging to the Hull Lumber Co. were drowned in the Ottawa river near the Chaudiere last month.

—The Hawkesbury Lumber Co. are making some improvements on the Colonge river, in preparation for next season's operations.

—William Barnes had his foot crushed by the machinery in Edwards & Co.'s mill at New Edinburgh, and amputation was found necessary.

—Mr. David Richard's saw mill and lumber yard, at Campbellton, N.B., was burned on July 18th. Loss, $18,000 ; insurance, $10,000.

—S. A. McAuley, of Lower Millstream, N. B., has added some new machinery to his saw-mill. He now employs about twenty hands.

—Argue & Son, whose saw-mill is at Otter Lake, have the contract for lumber to build the spool and bobbin factory at Parry Sound for Lennox & Kerr.

—Rupert Newcombe has started an industry at Clementsville, Annapolis County, N.S., for the manufacture of coiled hoops, hardwood staves and heads.

—The Holland and Emery Lumber Company are constructing a new shingle mill and placing a new pony gang in connection with their band mills at Byng Inlet, Ont.

—The Dickson Company recently started their new saw-mill at Lakefield. The mill is very complete in point of equipment, and will manufacture over 100,000 feet of lumber per day.

—Peter McArthur is putting in a mill at Lake Winnipegoosis, Man., for cutting railway ties. The plant was furnished by the Waterous Engine Works Company, through their Winnipeg branch.

—Mayor Bingham, of Ottawa, has a number of men engaged in rafting square timber on the Gatineau river. It is stated tnat some very fine pine was last year cut on the Upper Gatineau by Gilmour & Hughson.

—Adam Beck, of London, Ont., has purchased the business of the late William Beck at Montreal, and has opened a cigar box factory there. Mr. Beck's factory at London will supply the trade west to the coast, and his Toronto and Montreal factories the eastern trade.

—W. Harris, of Day Mills, Ont., writing to the Toronto Globe, offers free water and site and a bonus to any person who will erect a wood-working factory there. He states that there is an abundance of good timber, including pine, spruce, hemlock, oak, ash, maple and birch.

—D. A. McDonald, of Trout Creek, Ont., recently cut a birch tree, which is claimed to be the largest yet found in Canada. The log is 32 feet long, and the butt end girths 10 feet 8 inches. The top end girths 8 feet 9 inches. About 36 feet from the stump, the top separated into three branches, one measuring 24 inches in diameter and another 17 inches.

—Mitchell Bros., of Berkeley, Ont., and Liverpool, Eng., are negotiating for the exportation of maple blocks from New Brunswick to England. Large quantities of these blocks are exported from Ontario via St. John, N.B., in winter, and it is thought that the opportunity is favorable for the opening up of the market for the native hardwoods of New Brunswick.

—There has recently been constructed at Portland, Oregon, by Messrs. Inman, Poulsen & Co., an immense raft of lumber containing 5,000,000 feet. This raft will be towed from the Columbia river to San Francisco. Johann Poulsen invented and superintended the construction of the raft, which will be a floating island of lumber 330 feet long, 30 feet wide and drawing 20 feet of water. The cables for towing are laid well back to the centre of the raft, and emerge in the square bow just above the water line. The promoters express every confidence in the success of the undertaking.

## PRACTICAL NOTES.

It has been noticed that the heavy chains used in the log haul-ups of saw mills after a time become crystallized and it is necessary to heat them. The heating changes the particles back to their original form, breaks up the crystallization and makes the chain practically as good as new, though it would have to be hammered to put it back exactly to a new chain.

Why does it cost less to run a condensing engine than a non-condensiug one with the same machinery running in the factory ; Simply because the former develops less total power than the latter. The area of the card will be the same, but the average height above the vacuum line will be less in the former case, and this is what determines the total power developed at a given speed.

Owing to the scarcity of black walnut and cherry, birch is largely taking the place of each. Black birch is much the same color as cherry, and is as easy to work as either cherry or walnut, and is as suitable for nearly all the purposes that those woods are used for. When properly stained, it is nearly impossible to distinguish it from either walnut or cherry. It is susceptible to a high and beautiful polish, is considered as good as many of the best furniture woods, and is now largely used by the leading furniture manufacturers.

A United States government report says heavy wood is harder than lighter wood ; the wood of the butt is therefore harder than that of the top ; the darker summer wood is harder than the lighter spring wood. Moisture softens, and seasoning, therefore, hardens wood. Wood is much harder when pressed longitudinally than when pressed transversely to the fibres, and it is somewhat stronger tangentially than radially. Though harder wood resists saw and chisel more than softer wood, the working quality is not always a safe criterion of its hardness.

The Industrial Journal, Bangor, Me., says the saw mill of William Engle & Co., at Orono, Me., is run by compressed air. The air compressor, located under the mill floor, is operated by a water wheel, forcing the air into a large storage tank, whence it is distributed, through pipes, to any part of the mill desired. The pressure in the tank is kept at 95 pounds. The machines directly dependent upon the compressed air for power are the carriage, nigger, log loader, log flipper, band log saw and two cut-off saws. This is claimed to be, and probably is, the only saw mill in the world operated in this manner.

Heretofore it was generally believed that the heating capacity of hardwood was greater than that of soft wood, but according to Staats Zeitnng this is not so. The greatest heating power is possessed by one of the softest woods, viz., the linden. Taking its heating capacity per unit, the second best heater is also a soft wood—fir with 0.99 heating power ; next follow the elm and the pine with 0.98 ; willow, chestnut, larch, with 0.97 ; maple and spruce fir with 0.96 ; black poplar with 0.95 ; alder and white birch with 0.94 only ; then comes the hard oak with 0.92 ; the locust and the white beech with 0.91, and the red beech with 0.90. Hence hard wood heats the least.

CEMENT FOR LEATHER BELTING.—The importance of suitable cement for making joints in leather driving belts has led the Society of Chemical Industry to endorse the following formula : First, equal parts of good hide glue and American isinglass, softened in water for 10 hours, then boiled with pure tannin until the whole mass is sticky, the surface of the joints to be roughened and the cement applied hot ; second, one kilogramme of finely shredded gutta percha digested over a water bath with 10 kilogrammes of benzol until quite dissolved, when two kilogrammes of linseed oil varnish are stirred in ; third, one and a half kilogrammes of finely shredded india rubber are completely dissolved in 10 kilogrammes of carbon bisulphide by heating, and while hot one kilogramme of shellac and one of turpentine are added, and the solution heated until the two latter ingredients are also dissolved ; fourth, one kilogramme of best glue is dissolved at a moderate heat in one and a half kilogrammes of water, and thickened to the consistency of syrup. One hundred grammes of thick turpentine and five grains of carbolic acid are carefully stirred in while hot ; the mixture to be poured into flat tin pans and allowed to cool, then cut into pieces and dried in the air. The cement is made liquid with a little vinegar and applied to the point with a brush ; this being done, the two ends of the joint are properly placed together and thoroughly pressed between two iron plates heated to a temperature of about 86 deg. Fah.

## STEAM BOILERS AND FROST.

AMONG the enemies which threaten the destruction of steam boilers, says the Journal of the Bavarian Society for the Inspection of Steam Boilers, frost is by no means the least formidable. The following two examples go to show that even boilers built of heavy plate and tested at high pressure cannot be exposed to the rigors of cold weather with impunity.

The boiler was, because of the scarcity of orders during the winter months, fired only two or three times per month, each time for several days, and was the rest of the time allowed to stand idle, filled with water. One fine day when the boiler, which consisted of upper and lower boiler, was being emptied and put in readiness for an inspection of the interior, it was found that the manhole cover in the rear head of the lower boiler had been forced out, and the rim of the manhole badly rent and bent out of shape.

Further examination revealed a cone of ice behind the damaged boiler head. The water in the upper boiler, which was at the proper level, was covered with a crust of ice about one centimeter, 0.4 inches thick. There could be no doubt that the ice cone in question had caused the damage, the mass of ice, in freezing trom the outside toward the interior, having found sufficient hold on the heads of the rivets and irregularities of the flue to cause the pressure developed by the final freezing of the core of the cone to act, instead of toward the free interior, upon the head of the boiler, until the latter gave way and became rent at its weakest point—the unfortified rim of the manhole. The process of destruction was favored by the fact that the door leading from the boiler-house into the open air was only a short distance from and directly opposite the unprotected boiler head.

Another boiler, which was used only once a week, was situated in a small stone building in the middle of the farmyard.

When on a certain winter day the boiler was to be heated, it was noticed that it was rent from the mud-hole of the cross-tube along the lengthwise seam to a point beyond the fourth rivet, but that no water flowed from the rent. On opening the man-hole over the crown of the fire-box it was found that the water between the shell and fire-box, as well as in the cross-tube, had frozen, and this at once explained the cause of the damage. The cylinder of ice which had formed in the cross-tube had pressed against the shell of the boiler and had caused it to burst along the seam—its weakest spot.

These two examples demonstrate that boilers which are little used and exposed to the cold must be protected in winter against freezing, and this is effected best by discharging the water or by maintaining on cold days a light fire under the boiler or in the boiler-room.

---

A saw-mill near Dumbarton Station, N. B., was destroyed by fire a fortnight ago. The mill was owned by Mr. Johnston.

Kelly's saw-mill at Buckingham, Que., was destroyed by fire on July 12th. It is probable that the mill, which was valued at $5,000, will be rebuilt immediately.

The Willow Creek Gold Mining Co., of Bell City, Rainy River district, have purchased a shingle machine and planer from the Waterous Engine Works Co., Winnipeg, which is being added to the plant of the company at Bell City. Mr. E. Todd, of Brantford, is manager of this company.

## SCARCITY OF STAVE AND HOOP TIMBER.

The Sutherland, Innes Co., of Chatham, Ont., in a letter in the National Coopers' Journal, comment upon the scarcity of timber for staves and hoops. When we look even around this immediate neighborhood, what do we find? they ask. Ten years ago, for 30 or 40 miles north, east and west, and for 12 miles south, we had what were thought to be illimitable forests, and now, where are they? Gone, and in their place the garden of Canada, and perhaps the richest agricultural soil in the world. Don't let our American friends pooh-pooh this, for land that will produce 12,000 to 15,000, and even 25,000 feet of elm alone to the acre, not counting other timber, we believe is unexcelled, while the climate of this peninsula is the most equable on the North American continent east of the Rockies.

The mills that are gone used over 100,000,000 feet of elm per annum. And the mills that are left, what are they? Where a one-knife mill used to have to turn away logs every winter, or nearly so, half a million feet is a large stock now, and the larger mills are stocked in proportion, except, in a few instances, where the manufacturers are able, from their own standing timber, purchased years ago, to stock up their mills in something like the old style. A few more years, very few, and the timber around here will be a thing of the past, and it puzzles us where the mills will go.

## THE J. C. McLAREN BELTING COMPANY.

THE following is the substance of a very neat folder addressed "To the Management of Electric Light and Power Stations," and distributed to the attendants at the recent convention of the Canadian Electrical Association at Montreal:

It is very gratifying to us to be able to say that we have handled the largest individual order for belting an electric plant that has so far been placed in Canada.

Doubtless you will be visiting our city shortly, when the annual convention of the Canadian Electrical Association will be in session this month.

In all probability amongst other points of interest that will be visited will be the generating station of the Montreal Street Railway system, acknowledged by all to be the best equipped on this continent, and in this connection we beg to draw your attention to the belting trasmitting the 7,000 h.p.

Our contract for this work covered the maintenance of these belts for two years from their starting up. It will surprise you to learn that the total expense to us in this connection did not amount to 1½ per cent. of the total value of the purchase.

These belts are all made from genuine English oak-tanned stock, a tannage that has properties especially adapted for the exacting work peculiar to electric plant.

So that you may better appreciate the magnitude of this contract, we give below a memo covering the number of hides and total weight of the leather, also a memo of the lengths and widths that comprised the various drives, consisting as you will note of twelve twenty-four inch double, and three fifty-four inch three ply belts.

Number of hides, 1,630; total weight of leather, 15,000 lbs.

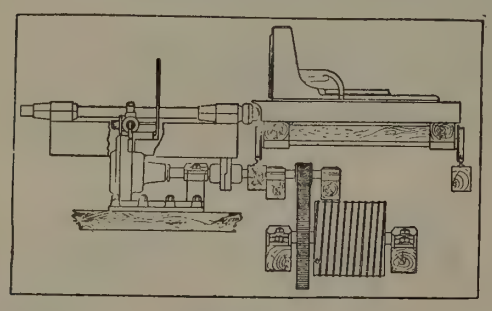
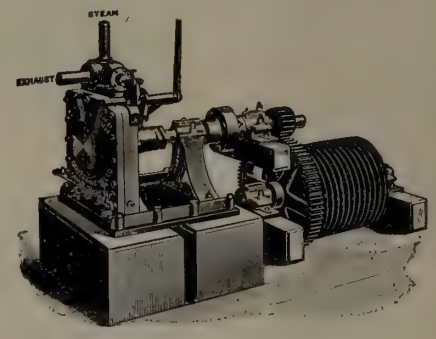
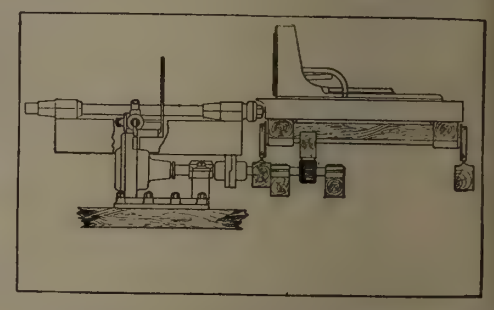
| " | 124 | " | 24 | " | " |

In the saw mills of Canada many different methods re employed for doing similar work, each one, perhaps, possessing certain points of merit. Superintendents, sawyers filers, etc., are respectfully asked to contribute to this journal their views as to the best method of doing certain mechanical work, such as lining and setting up shafting, setting up rotary and other circular saws, rules for finding out and marking off the shape of circular saw teeth for guidance in grinding and filing.

Steam pipes and wood in close contact make a combination from which fire is always liable to result. No doubt a great many dry kiln fires start from this cause. A. L. Artz, inspector for the Lumber Mutual Fire Insurance Co., of Boston, Mass., thinks the steam pipes in a dry kiln should be overhead and the ventilators below. To quote his words: "However, if steam pipes are beneath stock, and it is thought they can not well be changed, they should at least be six inches above the floor, and have the slatted floor above them made in small sections, so that it can be easily taken up and all refuse swept out frequently. It will pay in the effectiveness of operation. Steam pipes covered with dirt, dust and sticks will self-evidently not give near as much heat as clean pipes, nor will they be cleaned unless arranged so as to cleaned easily."







The DAKE STEAM FEED

Embodies the following Advantages:
SIMPLICITY OF CONSTRUCTION,
POSITIVE AND EASY MANAGEMENT,
ECONOMICAL USE OF STEAM,
SMALL SPACE OCCUPIED, CHEAPNESS,
EASY ADAPTATION TO EITHER NEW MILLS OR THOSE NOW IN USE.

The movement of the engine in either direction is under the absolute control of the sawyer, thus accomodating the speed of the feed to the size of the logs.

Mill men who have used other makes of Steam Feeds comment favorably on the economical use of steam of our feed over others.

## BALL NOZZLE SYSTEM.

By the proper arrangement of the pipe system and the use of stand pipes with the Ball Nozzle at the top, a lumber yard may be made substantially fire-proof.

Lumber yards can be equipped thus cheaply and effectively, practically obviating the danger of conflagrations of the most destructive character, and effecting *a Large Saving in Cost of Insurance.*

## This Saw Stands Without a Rival

AND IS THE

**FASTEST CUTTING SAW IN THE WORLD!**

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

## Maple Leaf Saw Set

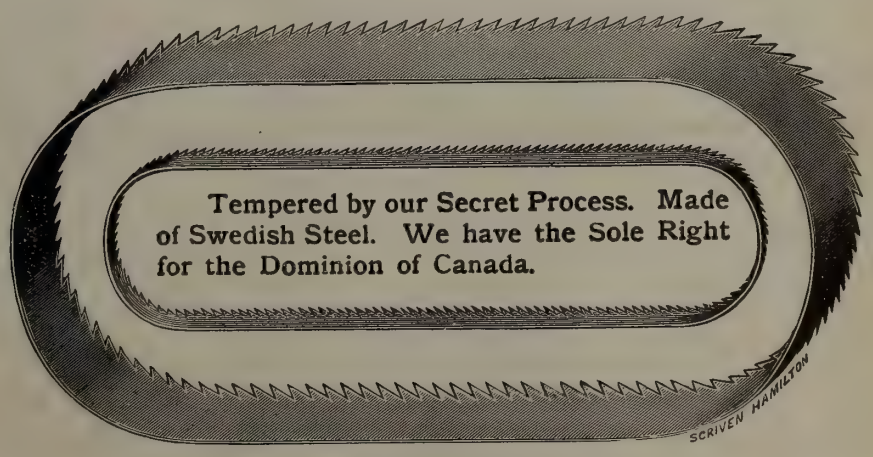
MANUFACTURED BY

**SHURLY & DIETRICH, Galt, Ont.**

**Directions.**—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

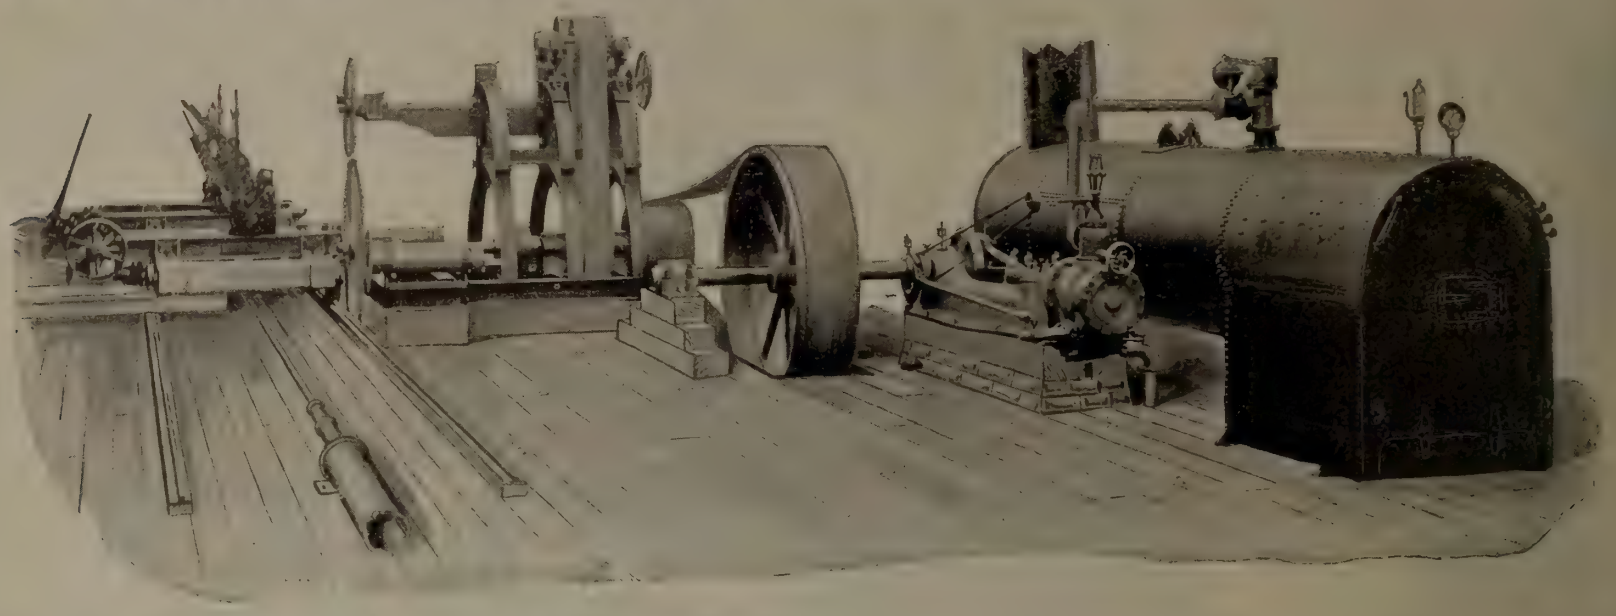
# HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

# PORTABLE SAW MILLS

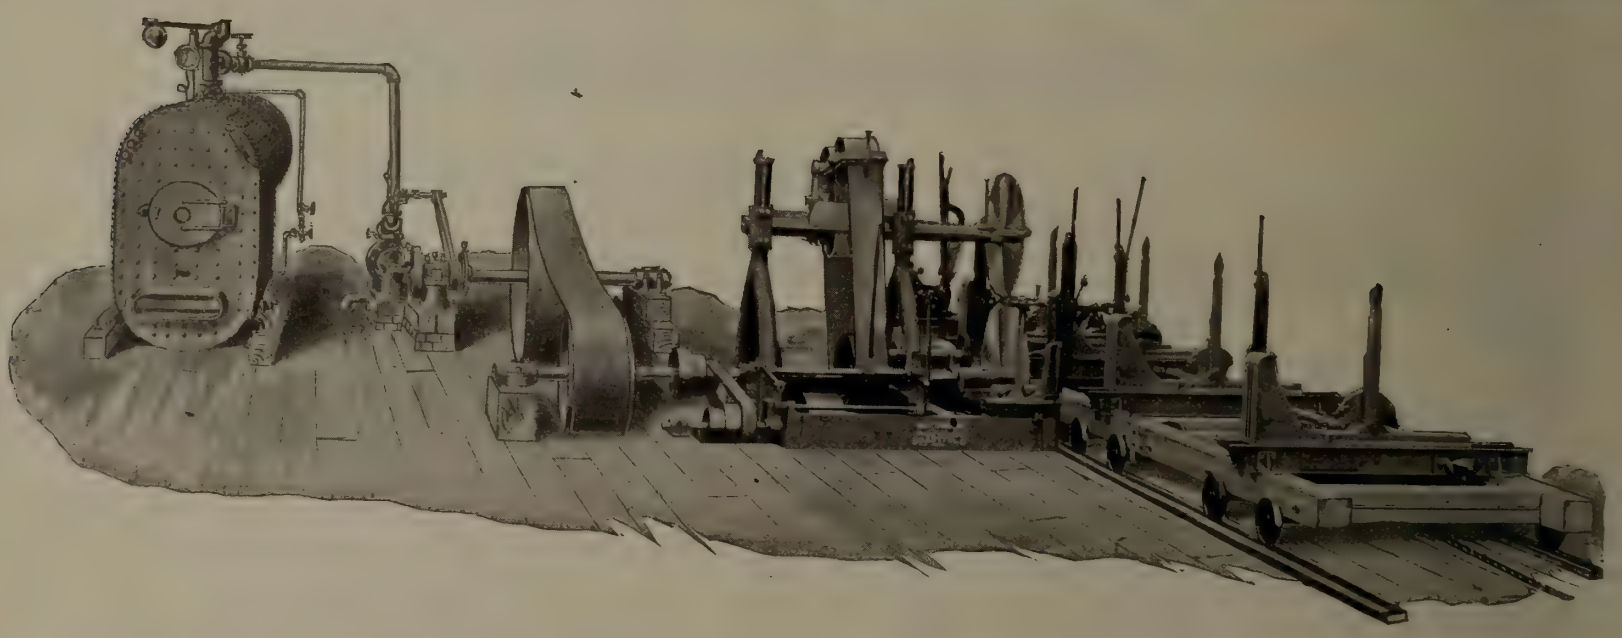
**in many instances are indispensable. Our Experience in building them extends over Half a Century.**



## 100 H.P. "PACIFIC COAST MILL"

With No. 4 Saw Frame, 72″ Lower and 56″ Upper Saw; No. 7 Girder Steel Unbreakable Carriage, opening 72 inches from Saw—all portions of Carriage either Rolled or Cast Steel, Direct-Acting Steam Feed, etc.

**Waterous, Brantford, Canada**



## 60 H.P. "ONTARIO AND WESTERN MILL"

With No. 3 Saw Frame, having 12 inch face Friction Feed Works, taking 60″ Lower Saw and 40 inch Upper Saw. A No. 3½ 5 Block Girder Steel Carriage opening 50 inches from Saw, with Peel and Reliance Cant Hook Double Spud Dogs—Rope Feed, Automatic coupling in Carriage between 3rd and 4th blocks—extras when required Bull Wheel, Slab Saw, Single or Double Edger, Trimmer, Live Rolls, Planer and Matcher, etc.

THE above are our Large Portable Saw Mills. We Manufacture all sizes down to 12 H.P., with Saw Irons of Smallest and Lightest Dimensions for Mule Back or Dog Train Transportation to the Mines. One of our 12 H. P. mills has been operated for years by the Hudson Bay Co., at Fort Churchill, H. B., and many are scattered throughout the Dominion. We have shipped several of the smallest to Ashcroft, B. C., for transportation 600 miles north into the Omenica and Cassiar districts; several for Dawson City, Kootenay, Rat Portage and Sudbury mining camps. Write or Wire Us for Prices and Delivery Date.

## MODERN LUMBER DRIERS

The dry kiln of to-day is born of the desire of manufacturers of lumber to make a short cut from the tree to the consumer. Much thought has been devoted to the subject of drying lumber quickly; many theories have been advanced, and some degree of success, in many instances, attained. In one instance only, however, has absolute, unqualified correctness of theory been demonstrated in actual, every-day practice. Success has crowned our efforts, and

## The Standard Improved Compression Dry Kiln

Stands **alone** to-day, the embodiment of the **only** correct principle of drying green lumber artificially. It is the **only** kiln which will dry **every board** from the top course to the bottom, and from the sides to the centre of the pile, **quickly, thoroughly** and **evenly**, leaving them bright, straight and stainless—perfect lumber.

This is the **only** kiln in which heavy, cast-iron headers, and "made-to-order" pipes and fittings are used. They cost more than the common kind, and are worth more, but are none too good for the "Standard," in which every inch of material and every detail of construction is of the most exacting quality.

**Moist Heat**, absolutely controlled in every part of the drying room, is the drying agent employed in this kiln.

Elaborate, illustrated Catalog for the asking.

## SKETCH OF A CANADIAN LUMBER KING.

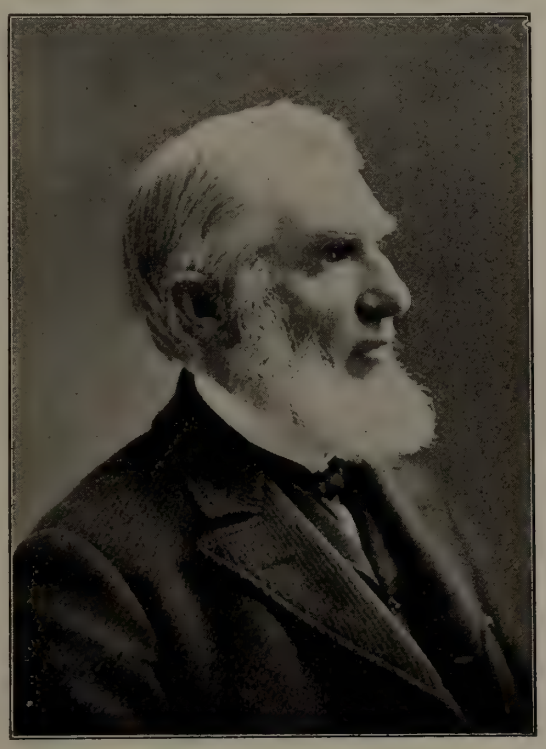
IT is said of Mr. J. R. Booth, of Ottawa, that he is the greatest lumberman on the American continent. This distinction he has earned by enterprise, perseverance and business ability, his wealth when launching out to make his way in the world consisting of less than ten dollars. A review of the life of such a remarkable man is always read with interest, while it must also furnish an example of what may be accomplished even by those born in humble circumstances.

Mr. Booth is a native Canadian, having been born in the town of Waterloo, Ontario, over seventy years ago. Like many of the leaders in the commercial world, his early days were spent on the farm. When reaching manhood he secured employment in the city of Ottawa as a sawyer. His first business venture was the purchase of a machine shop, which was destroyed by fire after eight months. There was a small mill lying idle on the present site of Mr. Booth's great establishment. It was rented by men who intended to start in business, but the deal fell through, and the young millwright secured a lease of it for ten years. He started on a small scale with a single saw. His first encouragement came in the shape of a contract for furnishing lumber for the Parliament buildings, awarded in competition with other bidders. He worked out his contract at a substantial profit, and purchased the saw mill after three years' occupancy. That was in 1860. In war times his business was very slack, and he was compelled to take a partner, but the outlook was so doubtful that the latter retired at the end of a year.

Mr. Booth had a large stock of lumber on hand, and shortly after his partner left a brisk demand sprang up and he sold all he had. This gave him a good start. About this time several tracts of timber land along the Ottawa river were offered for sale, comprising the estate of John Egan, who had owned a tremendous quantity of timber. Mr. Booth was doing a small business with the bank, and the officials had confidence enough in him to advance a sum, for which he paid 7 per cent. interest. With this money he secured a large limit at a fraction of its value, and increased the capacity of his mill by putting in two gang saws. He used all the money he made and all that he could get credit for in buying more timber limits, running largely into debt. This proved to be a wise policy. To-day he owns more pine timber land than any other one person in the Dominion.

Frequently Mr. Booth found it necessary to add to his mill plant, and in 1892 he had 13 band saws and four gates in operation, with a capacity of more than one million feet in ten hours. Day and night crews could turn out two million feet of lumber in twenty hours, but as double crews were never employed on account of the difficulty attending the handling of such an amount of lumber after it leaves the saws, the capacity has always been stated as one million feet, and exceeds that of any other mill in the world.

In the month of May, 1894, his extensive mill was destroyed by fire, entailing a serious loss to Mr. Booth and to the citizens of Ottawa and Hull. Shortly afterwards he purchased the old Perley & Pattee mill adjoining the burned property, and fitted it up with improved machinery. The plant as it stands to-day will cut from six to eight hundred thousand feet of lumber in a twenty hour run, and consists of a series



MR. J. R. BOOTH.

of buildings, some of which are of stone, the walls of which remained intact after the fire, while the other buildings are of timber. There is a lath and picket mill, a mill for the reduction of slabs into shingles, box boards and lath, a mill with one large band saw, swing saws, etc., and the main mill, which is fitted with four single bands, a pair of twin circulars, two 62 inch Wickes gangs, trimmers, butters, etc. Last year the season's cut was 130,000,000 feet.

The mill is situated on the Chaudiere Falls at Ottawa, and is driven by water power. The sawdust has for many years been dumped into the Ottawa river, but as an act has been passed by the Dominion parliament prohibiting the dumping of sawdust and refuse into rivers, steps are now being taken to dispose of the sawdust in another manner.

Over twelve hundred men are now employed about the mill and yards, and 368 wagons are utilized in moving the lumber from the mill to the piles or from the yard to the cars or river boats for transportation. The deals destined for the English market are loaded upon river boats and towed to Montreal, for re-shipment by the regular ocean liners. Probably fifty per cent. of the product of the Booth mill finds a market in England, while the balance is sold in Canada and the United States, Mr. Booth's large trade in the United States being supplied largely through the mill and sorting yard at Burlington, Vt., and the sales office in Boston. There are often carried in stock over 100,000,000 feet of lumber, and the mill and lumber yard cover 160 acres of property.

To the subject of this sketch the mill employees of the Ottawa valley are indebted for a reduction in the daily working hours. In the spring of 1895 Mr. Booth voluntarily reduced the working day of his employees from eleven to ten hours, without any corresponding reduction in wages. This generous action was freely commented upon, and was very soon copied by other mill operators, until to-day ten hours has been almost universally adopted as the standard day.

As previously stated, Mr. Booth owns very extensive timber limits, estimated at 5,000 square miles, at the head waters of the Ottawa river, 100 to 240 miles above the mill boom. After the logs are driven to the boom they are sorted into the smaller booms, the size and quality of the log deciding its final resting place. A novel method is employed by Mr. Booth for getting the logs from his Nipissing limits to Ottawa. Five miles from Lake Nipissing to the north-east is the Mattawa River, an important tributary of the Ottawa. Between Nipissing and the Mattawa is the rise of land separating the waters of the north and east from those of the west and south. Mr. Booth put down five miles of track connecting the two bodies of water, and built a great barge on which he floated a standard size locomotive from the Canadian Pacific Railway to his isolated track—a feat that was applauded far and wide in that region. For twelve years that locomotive has been puffing back and forth transferring logs over the watershed.

Twenty-three years ago Mr. Booth established at Burlington, Vt., extensive lumber yards and wood-working factories, covering an area of forty acres. This branch of his business is under the management of his brother, Mr. E. Booth. A box factory there consumes from 5,000,000 to 8,000,000 feet of lumber annually. Most of the lumber handled is the product of the Ottawa mill, but lately considerable spruce has been taken down the lake by boat.

### BUILDING OF RAILWAYS.

In addition to his extensive lumbering operations, Mr. Booth has interested himself very largely in the construction of railways. In order to obtain a direct outlet for his lumber to Atlantic ports and eastern inland cities of the United States, he built, some years ago, the

Canada Atlantic Railway, which extends from Ottawa to Swanton, Vt., a distance of 163 miles. The road crosses the St. Lawrence river at the head of the Coteau rapids, thirty-seven miles west of Montreal, where a bridge over one mile in length has been constructed. Mr. Booth financed the project from beginning to end, and

LUMBER SLIDE, MADAWASKA RIVER.

is now said to own seven-eighths of the entire railway and equipment.

The building of the Ottawa, Arnprior and Parry Sound railway is the latest work which Mr. Booth has brought to completion. This road extends west from Ottawa to Parry Sound, a distance of 264 miles, and passes through a large section of well timbered country. It has been the means of establishing large saw mills, of opening up the natural resources of the district, and of providing a freight and passenger service between the western country and England that is said to be several hundred miles shorter than by any other route. This railroad was commenced in the year 1892, but it was not until January 1st, 1897, that the first regular train ran over the line. At first there seemed to be almost insurmountable difficulties in the way of its construction, but Mr. Booth was not easily discouraged, and soon found a feasible route. In the vicinity of Whitney saw mills are springing up to send their product by the new road through Ottawa to the east and via Parry Sound

PERLEY CHUTE, MADAWASKA RIVER.

to Chicago and other lake ports. Two of the largest mills are those of the St. Anthony Lumber Company at Whitney, and Gilmour & Company at Canoe Lake. At Parry Sound, the western terminus, extensive docks and grain elevators have been constructed. In 1893 a tract of land in the district of Nipissing, between Georgian Bay and the River Ottawa, was set apart by the Ontario government as a reserve. It is known as Algonquin Park, and contains about one million acres of primeval forest, lake and stream. The Ottawa, Arnprior and Parry Sound Railway passes through this park, which affords splendid fishing, shooting, etc., and is largely patronized by tourists. The passenger traffic is therefore becoming an important feature, and to-day the wisdom and keen foresight of the promoter in undertaking the building of the road is acknowledged by all.

Some of the greatest business achievements of Mr. Booth are outlined above—sufficient to merit the distinction of a "commercial hero" which someone has aptly applied to him. As a citizen, he is held in high esteem, being kind-hearted and charitable. Although frequently urged to accept public office, he has preferred to follow his business career.

A portrait of Mr. Booth, taken from a late photograph, and views of a lumber slide and the Perley chute, on the Madawaska river, along the route of the Ottawa, Arnprior and Parry Sound Railway, are presented herewith.

## BRAZING BAND SAWS.

By A. J. Burton.

I use an emery lap grinding machine, for I can make a better lap and do it much quicker with a grinder than with any other machine or process. If the grinder is kept in proper shape and run right you will not need to use a file. I have ground both laps on a 10-inch 14-gauge saw in 11 minutes with a Bolton lap grinder, and did not use a file after. Make laps 5/8-inch and 1-16-inch, grinding them down to a feather edge, and when you set the saw in clamps to be brazed overlap laps 1-32-inch on each end, so there will be something to file off, and after lap is dusted it will be a 5/8-inch lap.

After grinding the laps, place the saw in brazing clamp. If you run "back" in the saw, push saw along past the lap, set back guides up even to back of saw, then pull saw back to right place. By this way, when braze is made, the back will be the same along the lap as in the rest of the saw. Attention to this will save time and labor in drawing out the back. Clean the lap with a clean pine stick dipped in chemically pure muriatic acid—the purest to be had.

The silver solder should be a little wider than the lap, and should also be cleaned with the acid; 3-1000-inch is the best thickness—such as is furnished by Baldwin, Tuthill & Bolton. With this solder I can make a perfect braze, so that when it is dressed there will be only a small streak across the saw, about the size of a silk thread. My brazes always hold well, are about as hard or stiff as any other part of the saw, and will not bend when going round the saw sharpener, as is so common with factory brazes. A braze that bends easily is sure to break about one inch from the lap. You may not know the reason it gave way, but if you were to consider the number of times it has been bent and straigtened in a day's run, you would see that this continuous bending causes crystallization in the saw at the place where the extreme edge of the irons was applied.

I can not make a good braze with irons too heavy, for they don't clamp evenly, hold the heat too long, burn the steel, burn the life out of the solder, and frequently the braze will open up before the saw is ready to go on the mill. Irons 1½ to 1¾ × 1¾-inch thick are the best. Steel makes a better material for brazing irons than iron, for the steel does not scale like iron and it takes the heat more evenly. The irons should be heated slowly in a charcoal fire, as this is not so apt to burn the irons and cause them to scale. A forge designed especially for band saw brazing should be used—such as is made by the Covel Mfg. Co., Chicago—for it is almost fire-proof, and has a long blast, so that the irons can be heated their entire length without burning them.

Heat the irons to a good light red; not a white heat, or the irons will scale more in some places than in others and the braze will "miss." A common cherry red will not do, but a light cherry red is all right. Clear all scale off the irons after they are hot by scraping them across the edge of the forge. When the irons are ready, drop or pour acid on the lap till it is wet, then place irons square across, and clamp. Take the irons off as soon as they turn to a dark red or about the time the red is turning blue. Then remove the saw from the clamp and fan it with a shingle or paper for a minute, and you will see the saw taking temper again; it will not twist and curl up, as it would if the irons were left on till cold, as most saw-makers advise. Leaving the irons on till cold makes a soft lap.

After the braze is cold, pour on a little lard oil and rub lengthwise the saw with a piece of No. 1 emery cloth—not sandpaper—until all the black and rust are off. Clean off with a file all lumps or surplus solder that may have run out. But do not file the lap yet. Now roll the braze, commencing in the centre and rolling towards both edges. Do not roll saw except on the surface of the braze where the irons were applied. Roll every half-inch till you reach both edges, then roll in the centre till the saw becomes stiff, for the saw is "fast" at that place after being brazed. Level with a cross-faced hammer, then clamp saw lightly between the rolls, about five or six feet from braze, and put a block eight inches deep under the braze on the leveling table, with a weight on the other end of the saw; it will bend over the block and be easy to dress. Use a 10-inch file and file lengthwise the saw, and you will not leave any mark or scratch, as you will if you file crosswise the saw. A deep scratch will cause a crack in saw at that spot in a short time. Do not leave the lap too thick or lumpy, nor dress it too thin. If you do it will not last. If you take pains to make a good braze, and dress and roll it properly, it will last as long as the saw. After the lap is dressed and leveled, roll in the tension as in the rest of the saw, and make the back true. If a saw cracks in from one to two inches, do not cut saw and braze it, as most filers do, but cut out a piece of ½-inch wide or ¼-inch on each side of crack, and the length or depth of crack. File a lap ½-inch on each side, shape a piece of steel to fit in it, and braze it in. Use a short brazing iron that will not rest all over the saw, and it will not take out the temper across the saw. It is much better to patch a saw in this way than to braze it, for you keep your saws all of a length, with less labor and less brazes. If the patch is in the front of saw it will

wear out in time. Your saws will run better and be a credit to the filer.

I have charge of a mill here with two large bands and two small bands, using ten and six-inch saws. It has run steadily since the 20th of April, with four new saws to the mill. I have not had to make a braze yet, and only had one crack, which I patched in the above way. If any of the readers of The Woodworker know of any one that makes a machine for grinding out a crack and putting in a piece or patch, I would be glad to here from them, with the address of the makers.—The Woodworker.

## A DOUBLE-ACTING BAND SAW.

In the mill of the H. C. Akeley Lumber Company, Minneapolis, Minn., there is in operation a double acting band saw, manufactured by the Edward P. Allis Company, and of which an illustration is given herewith. It is claimed that the saw has given entire satisfaction, and has a capacity greater than any single saw ever operated.

The following particulars of the invention will no doubt be read with interest by lumbermen in Canada:

To the ordinary observer the mill does not look any different from the ordinary band mill, with the exception that the saw has teeth on both sides, but there is a material difference that appears when the mill is running. Some considerable changes were made in the mill to receive this double saw. E. E. Fitzgerald, salesman for the E. P. Allis Co., some time ago worked out a scheme for the raising and lowering of the whole mechanism of a band mill. His idea in this was to do away with the guide that has been necessary for the saw, and by bringing the upper wheel down close to the log, to make the saw more rigid at that point. Heretofore objections have been raised to the band saw for the reason that it could not be made rigid enough to get the amount of speed out of it that was wanted. The whole mill is raised by hydraulic power, operated by means of a lever near the sawyer, and pulleys and a weight that nearly balance the mill.

The live rolls have been extended back through the saw and along the lower edge of the log deck, and to keep the logs off them on their way to the carriage, there are built extended arms to the log loaders that reach out over the rolls to the carriage. The position of the setter on the carriage has been moved to the other end, so that he can see the sawyer when he starts on a back trip. On the other side of the saw an arrangement has been devised by means of which the log, after it has been slabbed for the gang saw, can be canted off the carriage and carried to the gang, while the last board cut is carried along under it on the live rolls.

The saws that are used on this mill differ from the ordinary band saws in that they are double edged. They are fourteen inches wide and have teeth on both sides. Another machine that has been made necessary in the mill by the introduction of the double edged band, is a filing machine built specially for it, and which will file both sides of the new saw at once.

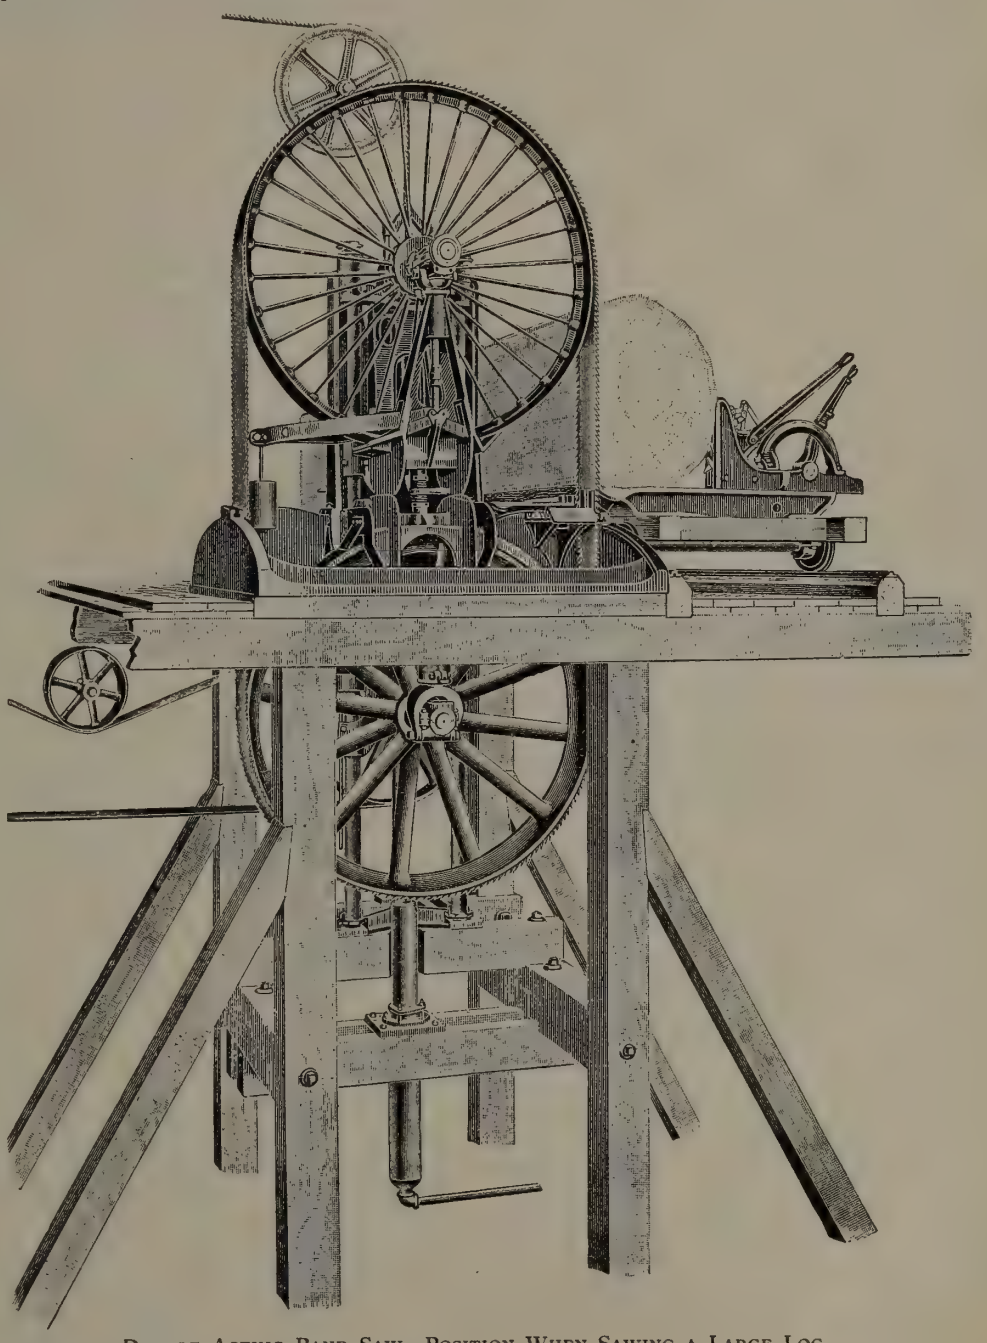
This double acting band mill is made to move on three vertical slides that are mounted in the center of a large base plate. The upper ends of the slides are supported in a heavy column, the lower ends of same supported by an independent plate that is bolted to frame work in foundation. By supporting the slides at the top and bottom ends as well as in the center, a very rigid construction for the support of the band mill is secured.

The machine is lowered by gravity and is raised by a hydraulic cylinder located under same. The hydraulic cylinder is supplied with pressure by taking water from the boilers below the water line at boiler pressure, or if used in a water mill by an independent pump. The band mill is counterweighted to within two thousand pounds of a balance, so that a comparatively small cylinder does the work rapidly and with ease.

The advantage of this machine over others is claimed to be that it moves the entire mechanism carrying the wheels up and down so as to bring the point where the saw leaves the upper wheel as close to the top of the different sized logs as possible. The object in this is to get a short, rigid blade, to keep the saw above the cut as short as possible at all times, and to keep the surplus length of blade below the log instead of on top, as with the ordinary mill. By lowering the mill they also bring the pressure of the log against the saw at a point close to where the saw leaves the upper wheel, making it impossible for the feed to crowd the saw backward on the wheels. The cutting capacity of the saw is limited only by the capacity of the teeth to carry out the sawdust.

In sawing under the upper wheel the saw will stand the feed and remain in place on the wheel with 50 per cent. less strain than the old style band mill. This naturally is easier on the saws, requires less work on the part of the filer to keep the same in order, and saves a great loss of power in friction, hot boxes, expensive stops, etc.

The invention of the telescopic band mill made the use of a double tooth band saw possible, as the upper wheel of this machine absolutely controls the direction of the cut and is set in perfect line; lower wheel is made adjustable to range the saw on the wheels and is also used without an upper guide.



DOUBLE ACTING BAND SAW—POSITION WHEN SAWING A LARGE LOG.

It is said that no time is lost in taking care of the lumber that is cut on the backward run, as the log deck is fitted with live rolls set 8 inches below the top of head blocks, and the steam log loader arms are provided with extensions which bridge over these rolls when loading logs onto the carriage, thus loading the logs without interfering with the board while passing on to the edger.

To test the capacity of the mill an eleven hour run was made recently. There was no selection of logs for the trial, which was just an ordinary run of the mill. In eleven hours there were cut 744 logs. The lumber cut from these logs was tallied, and amounted to 101,560 feet of inch lumber.

---

The British American Land Company have closed down their saw-mill at Sherbrooke, Que., and will not operate in the woods this winter.

## FOREST, CLIMATE AND WATER FLOW.

THE beneficial influence of the woods in tempering the rigors of a cold continental climate, with its sudden changes and severe storms, is probably conceded by all, writes Filibert Roth, special agent of the Division of Forestry, in his report on forestry conditions and interests in Wisconsin. What share the forest has in the general changes of humidity is not so apparent. That a general and very gradual change from a moisture to drier condition has been going on for a long time over the entire lake region seems quite certain. The behavior of hemlock and even white pine in the matter of distribution is probably in part due to this change. How much the forests have done to retard the progress of this desiccation can only be inferred. On the other hand, the striking changes in the drainage conditions which have taken place within the memory of many of the residents, have fairly forced themselves on the attention of all experienced and observing people, and are all too intimately connected with the changes in the surface cover to leave in doubt the influence of this latter on the former.

The flow of all the larger rivers has changed during the last 30 years, navigation has been abandoned on the Wisconsin, logging and rafting have become more difficult on all rivers, and, what is even a far better measure of these important changes, the Fox river is failing to furnish the power which it formerly supplied in abundance. The "June freshet," which in former years could be relied upon in driving operations, has ceased on most streams and is uncertain on the rest of them. Of the hundreds of miles of corduroy road a goodly per cent. has fallen into disuse, the ground on the sides has become dry enough for teams, many swamps of former years are dry, and hundreds of others have been converted into hay meadows and fields without a foot of ditching.

THE CANADA LUMBERMAN
WOOD WORKERS' MANUFACTURERS' AND MILLERS' GAZETTE

MONTHLY AND WEEKLY EDITIONS

C. H. MORTIMER
PUBLISHER

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
NEW YORK LIFE INSURANCE BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Special correspondents in localities of importance present an accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome, but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way affecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

### *TO VISITING LUMBERMEN.*

*Lumbermen visiting Toronto are invited to use the office of the CANADA LUMBERMAN as their own. We shall take pleasure in supplying them with every convenience for receiving and answering their correspondence, and hold ourselves at their service in any other way they may desire.*

## EASTERN CANADA AND EXPORT EDITION.

THE October issue of this journal will be known as an "Eastern Canada and Export Edition," and will be largely devoted to the interests of manufacturers and exporters of lumber in the provinces of Quebec, New Brunswick and Nova Scotia. Spruce, the chief lumber product of these provinces, has grown in favor in foreign markets within the last few years; but, as is the case with other woods of Canada, it is as yet comparatively unknown by many extensive foreign consumers of lumber and wood goods. The principal objects in view in the publication of this special issue are to induce a better knowledge of the timber resources of these provinces, to more fully acquaint our manufacturers with the requirements and trade possibilities of foreign markets, and to furnish a medium of communication between our manufacturers and importers and consumers in other countries.

Arrangements have been made for the publication of much information bearing on the requirements of, and reflecting the conditions existing in foreign markets, and it is hoped to present a number which will be of intrinsic value alike to lumber manufacturers, exporters and importers. The support already received indicates that the trade appreciate the advantages to be derived from a wider diffusion of information on these lines.

A copy of this number will be placed in the hands of every lumber manufacturer in Quebec and the Maritime provinces, and the leading timber importers in Great Britain, France, Germany, South America, West Indies, and other foreign countries. The value of this special issue as an advertising medium, and as a means of communication between buyers and sellers of lumber and other timber products, will at once be apparent. Manufacturers of saw, planing and pulp mill machinery should not let pass this opportunity of bringing their goods directly to the notice of probable customers, while every lumber manufacturer desirous of cultivating an export trade, and becoming known in foreign markets, should be represented in the pages of this number. It is impossible to personally interview the large number of manufacturers, but advertising rates and other information will be gladly furnished by letter.

## SHORT DELIVERY OF CARGOES.

PREVIOUS reference has been made in these columns to the necessity of manufacturers and shippers of lumber to foreign markets giving greater attention to the manufacture and shipment of the stock. The lack of this attention has in the past operated against the interests of the Canadian trade, and diverted orders in other directions. There has, we believe, been a partial realization of this fact by our shippers and manufacturers, but the trouble has not been entirely remedied.

Our contemporary, Timber, of London, Eng., devotes considerable space to this question, pointing out that importers of Canadian spruce have frequently to submit to serious and irritating shortage losses, either through the carelessness of the shippers or the ship-owners. It is said that often there has been a shortage of from 30 to 50 standards in a cargo, the discrepancy usually occurring in the measurement rather than in the number of pieces.

A late instance is cited in which the matter in dispute has just been decided by the courts. Last year Messrs. Crossfield & Co., of Barrow-in-Furness, chartered a vessel from the Deddington Steamship Company to carry a cargo of deals from St. John, N.B., to Barrow, the stock being shipped by Messrs. Alexander Gibson & Sons. On delivery the goods were measured by the consignees, and their return of the total number of pieces corresponded exactly with the number shown by the shipper's bill of lading. It was found, however, that the deals turned out 2,459 pieces less than claimed by the shipper, while the smaller and shorter sizes of boards, scantlings and ends were precisely the same number in excess. There was therefore a deficiency in the total measurement of 44 standards, representing a value of £213 to Messrs. Crossfield. The latter brought action against the vessel owners for the delivery of the balance of the stock, but the court decided that the vessel had delivered all the cargo she received on board at St. John.

It now remains for Messrs. Crossfield to take action against the shipper, and for the courts to decide which measurement shall be accepted as correct. It is said that correspondence was produced between the buyer and the seller in which the latter admitted that part of the cargo had not been strictly measured in detail, which would seem to show the unreliability of the bill of lading.

The effect of disputes such as the above cannot but injure the Canadian lumber trade, and it behooves exporters to take every precaution against errors of this character. There are said to be many difficulties encountered in loading cargoes in the port of St. John, and that occasionally it is impossible to measure in detail all the deals, boards, scantlings, ends, etc. This may account for some of the discrepancies which have arisen, but they should in any case be reduced to a minimum, otherwise importers will refuse to buy except on delivery at port of discharge.

## THE RECENT MEETING OF LUMBERMEN.

AT time of writing a conference is being held in the city of Quebec for the purpose of adjusting matters in dispute between Canada and the United States. As was pointed out in a previous issue, the question of lumber and log duties is almost certain to enter into the deliberations of the commissioners. Recognizing this, the lumbermen of Ontario held a meeting on August 2nd and placed themselves on record in a manner that cannot but be of assistance to the Canadian members of the conference. In brief, the Lumbermen's Association of Ontario unanimously declared in favor of reciprocity in both lumber and logs.

It is too much to expect that the policy adopted by the association will meet with the approval of all. Personal interest is the standpoint from which it is viewed. There were those at the meeting who were in favor of a free exchange of forest products between Canada and the United States; others who were bitterly opposed to the export of saw logs from Canada under any conditions; yet they met on a common ground and unanimously agreed upon a resolution which would be most likely to strengthen the position of the commissioners at Quebec.

Some persons may be inclined to the belief that the lumbermen have changed their ground by adopting this resolution. Reference to the proceedings of former meetings will show that this is not the case. When the prohibition of the exportation of saw logs was asked for, it was accompanied by a provision that whenever an equalization of conditions should be brought about, the embargo placed on the export of saw logs should be removed. This is in line with the action now taken.

Canadian lumbermen do not fear fair competition, but take exception to giving the manufacturer in Michigan sawing Canadian logs a direct advantage of two dollars per thousand over the manufacturer located on the Georgian Bay.

Whatever may be said in favor of maintaining our timber for our own industries, no one will deny that to lumbermen, engaged in the business for pecuniary results, the free entry into the United States of the forest products of Canada is of some value. In return for this the lumbermen as a body have declared that they are willing to allow the Michigan mills to continue to obtain their log supply from Canadian limits. It is improbable that anything short of the free entry of all forest products, including pine, spruce, hardwood and other lumber, both rough and planed, would be sufficient to induce the lumbermen to ask the Ontario government to abrogate the law requiring home manufacture of timber cut on Crown lands. There would also seem to be some doubt, owing to the present small majority of the Liberal party in the Legislature and the strong public sentiment in favor of having timber manufactured within the province, that the Ontario government would grant the request even if asked to do so. It must be remembered, however, that the revenue from timber limits is certain to be decreased by the manufacturing clause.

To return to the meeting of the Lumbermen's Association. It must have been gratifying to the trade to hear the kindly sentiments expressed by the President in relation to the hardwood manufacturers. He outlined the steps that had been taken to induce them to become members, and evidenced his pleasure at having representatives of that branch of the industry present. It was resolved that the Board of Management should take up with the railways the question of the high freight rates on hardwoods, a matter that has been frequently referred to in this journal as an injustice to the hardwood trade. A vigorous effort will be made to secure a reduction of the rate on hardwoods to the same as charged on pine. For this action the association merits the thanks of every hardwood dealer in the province. If immediate success is not attained, the agitation should be continued, as we believe that finally the rates will be made uniform. We were recently informed by a representative of one of the railway companies that the rates are based on valuation, and that the opinion is prevalent that hardwood lumber is more valuable than pine. In Canada we do not think that this is the case. Our supply of expensive hardwoods is very limited, while our common hardwoods, such as basswood, elm, maple, birch, and ash, are even less valuable than pine. When these facts are brought to the attention of the Classification Committee, the request for a reduction in rates will no doubt be granted.

There are in Ontario a number of hardwood manufacturers who have not yet identified themselves with the association, but whose connection would materially strengthen its influence. Now that the work has been begun, let there be a hearty response to the invitation of the President to persons belonging to this section of the trade to enroll themselves as members.

---

The Canadian Locomotive and Engine Company, of Kingston, Ont., will exhibit one of their well-known shingle mills in operation at the approaching Industrial Exhibition in Toronto. Their exhibit last year attracted much attention.

## EDITORIAL NOTES.

LUMBERMEN from all parts of the Dominion will visit Toronto within the next two weeks for the purpose of attending Canada's industrial exhibition, which is now recognized as one of the best on the continent. The CANADA LUMBERMAN extends to visiting lumbermen a cordial invitation to visit our offices, where they will be furnished with facilities for answering correspondence and supplied with any desired information which it may be in our power to give. Our offices are situated in the Confederation Life Building, corner Richmond and Yonge streets, one of the finest office buildings in the city, centrally located, and equipped with electric passenger elevators.

---

THE Northwestern Lumberman comments upon the backwardness of eastern wholesalers this year in purchasing stock at northern lake ports, and states that only for low grade stuff have they entered the market at all. The reason for this is that the demand from the west has been extremely active, which has forced prices so high that the eastern dealer felt very skeptical of being able to make any profit in handling the stock. Our Chicago contemporary concludes with these words: "It is likely that when there shall be a return of normal conditions in the east and west alike, the scramble for western pine will be more fierce than was ever before known. It will grow intense as the supply shall diminish. Which section of the country will come out uppermost in the trade struggle?" Here is another admission that the timber of the United States will soon become exhausted, and also of the early dependence of the Eastern States upon Canada for a supply of lumber.

---

THE following pointed remarks concerning Canadian business methods are found in a recent issue of the Timber News, of Liverpool, England:

"The cheap way some of our Canadian cousins have of endeavoring to open up new markets is amusing. Firms in the Dominion are ever seeking to make some new thing, just as firms over here are. Before they launch very far into their new enterprise, these Canadians, however, command the services of their commissioner in London, and ask him to put out inquiries through the trade journals and the ordinary press as to firms in this country who are ready to purchase their manufactures. The commissioner does so, with what result may be imagined. The general body of the likely buyers ignore the inquiries, believing they look a bit fishy. Practically only new beginners and second-rate houses take any notice of them, and but very few of these trouble to communicate with the commissioner. The upshot of the whole thing is that no trade results. The system adopted does not commend itself to the British mind, for Britishers themselves never adopt the plan of the Canadians named when they want to open a new market. The British merchant either sends out a representative or advertises his goods in such journals and newspapers as he believes circulate influentially among the people he is desirous of having a business connection with. Will our said half-awake Canadian cousins take the hint? To make use of their commissioner may be and is a cheap plan of doing the thing, but it is a puerile and unsatisfactory method in the year 1898."

These remarks, although perhaps inspired by a personal interest, contain a degree of truth. We are free to admit that Canadian manufacturers may have relied too greatly in the past on government agencies to secure trade. On the other hand, taking the lumber trade as an example, the efforts of a number of exporters, who have established European agencies and successfully competed with the large and old-established Baltic houses, are to be commended. It must also be remembered that in Canada there are many manufacturers in a moderate way, who cannot afford to send a representative to foreign markets until reasonably certain that business can be obtained. It is in the direction of furnishing information as to the prospects of trade that the government commissioners can be employed to advantage, and not after our manufacturers have launched into the new enterprise, as stated by our contemporary. Canadians are not only half awake, but wide awake.

---

## MAKING VENEERED DOORS.
